Whatever else can be said about hams, in general, they provide
inexpensive and reliable support for public events in which they give
free time to support charities or other nonprofit groups. Not possible
to dispute.

That some people have a problem with that is a bigger statement about
those people than it is about Hams.

I don't have statistics in front of me, but I do know that when I
started buying cars, a typical loan was 2 years. now they are doing 6
and seven year loans.

> I just paid it off, and it's got a lot more usable life in it. So the total

That's good to pay off a car in two years. Hopefully you got a good
trade in, or your payments were pretty steep. A 0 percent loan with no
down payment would be almost $1100 per month.

>

I've leased two cars now, and did okay by both of them. For this go
round, I wanted to buy, and to do that, I spent 10K less for the new
vehicle than I did 5 years ago for my last one to keep the payments
reasonable.

> And because enough people buy on price alone.

The old IBM's were meant to last. One of these days maybe we'll
concentrate on writing good functional software and operatin systems
that actually work, and then we won't have to get new computers every
two years.

> Meanwhile, folks like me cherrypick the trailing edge for pennies. This Amidon

I do both. I have the latest and greatest for some of my uses, and I'm
using an old P166 Thinkpad running Win95 for my rig computer. The old PC
laptops had very nice sound output, and were built well.

They are? Would it be too much trouble for you to name one or two of
'em?

You seem to be whining and crying about amateur radio licensing issues
even though you weren't born when amateur radio was.

This one sounds a lot like you too! Your personal fantasy of somehow
being a part of amateur radio and outlining the regulations under which
amateur radio should be governed is the stuff of legend. You must
realize that you can't transform reality to suit yourself. Maybe you
should work on trying to make yourself acceptible to others.

You mean that it is like your recent shuffle and twirl on amateur
radio's involvement in the L.A. Marathon--the one you watched, read
about in the paper and spoke about with an unnamed race official? You
certainly did some misdirection after being provided with those url
links.

> TAFKARJ uses the newsgroup as a Chat Room to talk about almost
> anything BUT the morse code test and ventures far, far afield from

> amateur radio at all. He wants to be an essayist.

Don't be modest, Len. Jim's output pales to yours. You write as if you
were being paid by the word.

> Mr. Foreign Service (who doesn't know that the Amana Colonies are

Believe me, Len. You're "something" but you aren't involved in any
capacity with amateur radio.

When you have some spare time (and you seem to have plenty of that), why
not put forth one of your lengthy pieces on these newly found Amana
Colonies. I'm sure you'll hold us spellbound.

> The gunnery nurse is just nuts and can't get his act together. He

> of righteous service to the nation by being hams.

Talk about control! How about a fellow who is not a participant in nor
a regulator of amateur radio who would tell us how amateur radio should
be regulated? How about one who would set a minimum age for entry into
amateur radio or one who would dictate whether morse testing should be
part of amateur radio license testing? Try reining in your gusto for
control and that ego of yours.

> Amateur radio is supposed to be an enjoyable hobby. But, with the
> tree regulars mentioned above (up a tree without a piddle), it's all
> one of being inordinately proud of their imaginary world and a desire
> to be respected because of that Belief.

Ham radio is an enjoyable hobby. You'll have to take my word for it.
It isn't an imaginary world at all. It is a world with over 600,000
individuals licensed just in the U.S. That you don't respect any who
hold those licenses reads like more of your "Fox and the Grapes"
routine.

> The morse code test is being removed from the regulations of many
> nations' amateur radio. PCTAs cannot abide by that. They remain
> in denial since loss of the morse test is a loss to their self-esteem.

Not abiding isn't the same as not approving or working against. It has
nothing to do with self-esteem since many of us have passed a number of
morse exams. Worry about your own self-esteem. After all, you're the
guy who is on the sidelines.

> They can't use that mighty morse test as a bragging point if it is
> eliminated.

Sure they can. Elimination of a morse test or reduction in morse testing speed doesn't mean they never took or passed such a test. You're brag-yet-to-come of an "Extra right out of the box" is another matter.
You can't brag if you didn't take the action. You haven't done so.

> "If they had to take a morse test, EVERYBODY has to
> take a morse test to be as 'good' as they."

Really? I'll let you know about it the first time I run into someone on the bands who has never taken a morse test and who can copy 35 or 40 wpm.

Mr. Former Service desires attention for himself and his past
involvement in military and civilian radio so he can attempt to impress
mere radio amateurs. As to misdirection, witness the subject of the
L.A. Marathon, introduced by you and your quick change of direction when
confronted by fact.

> The PCTA regulars all want to misdirect into Chat Room fights for
> ascendency. That way they think they can hurt others by trying

Funny. Are you trying to hurt others by trying to show that you're an
expert IN amateur radio subjects. You seem to hit on others for
speaking against you.

> It looks like they want to be the Biggest Rock in a field of pebbles.

When it comes to amateur radio, you have yet to become a pebble.

It doesn't matter, Robert...Lennie and PuppetBoy have been left
with their fly's open once again, and they'll be digging hard to try
and "spin" their collective way out of this, yet another glaring
example of Lennie's "mythos" rants against Amateur Radio.

The programs specifically cited about in the Proclamation are the
same programs in every State of the Union.

I'm "laughing at the superior intellect" once again.

> radio help to be successful?

I didn't see that implied. Don't waffle, Len. You introduced the topic
of the Los Angeles Marathon and you claimed that amateur radio wasn't
involved. It is a good thing you're typing your responses 'cuz you
surely couldn't talk with that foot in your mouth.

> You haven't proved anything about ham radio being NECESSARY
> to stage and operate any marathon.

That isn't the issue at all. You said that amateur radio WASN'T
involved in a particular marathon. You were dead wrong.

> Road Races are run by sports cars on roads.

On tires.

> Marathoners run on foot.

On roads.

> Try not to be too much like the Schoolmaster who was once

I could slow down and do 20 wpm if I chose to do so. Most modern
computer/HF multi-mode controller TTY users still stick with the 45 baud
speed of the old, obsolete Model 15. If I choose to work RTTY, I'll do
so. If I choose to operate using morse, I'll do so. You do what you
can.

Sure I can. When you and Lennie make idiotic postsings, I present
information or evidence that you are wrong. No problem.

> > > You're obsessed.
> >
> > Coming from a guy who continues to post to a newsgroup about a
> > radio service that he's stated he has no use for, we should take you

> I've stated no such thing. You continue to lie.

Nice "cut-and-paste", Sir Scummy II...That was in reference to
Lennie, when in context is no "lie".

> > You're a liar...that means I have no tolerence for you.
>
> Quixoterobeson, it comes as no suprise that you have no tolerance for
> people who don't lie, either.

Such as...YOU...?!?!

Please provide me some "ferinstance", Brain...

> > You misrepresent the truth about the Amateur Radio service.
>
> Absolutely not. What lies have I told?

Let's start off with your "Somalia" operation, Brain.

> You
> > do this because you are an evil, petty little person. But you

> > wouldn't be the FIRST petty little person who got his way by repeating
> > the same lies over and over...I just intend to not LET you have your
> > way.
>
> Holy guacamole! A person points out that you are nuts, and so they
> are evil, petty little people? Are your ex's evil petty little
> people? Is your shrink an evil petty little person?

First of all, you have yet to provide this forum with your credentials as to what qualifies YOU as determining who is "nuts"...You HAVE been asked SEVERAL time to do so. (Just being peeved about getting your nose effectively rubbed in your silliness does not "qualify" you)

As for what I consider "petty" or "evil" (no, neither of my "ex's" are and I have NO "shrink"), that would include people who find it necessary to intentionally misrepresent dedicated and motivated volunteers.

> > So far, it's working.
>
> So far all we hear is your flatulent mouth spewing lies. When are you
> going to get to the truth? It will set you free.

"...flatulent mouth spewing lies..."

Interesting, coming from the guy who can't/won't validate a single aspect of his big "DX" operation from a UN-controlled Somalia....

Interesting coming from a guy who claims that a military officer gave him "permission" to operate from said area, but can't/won't name the officer or that officer's billet which allowed him to render the permission.

Interesting, coming from a guy who claims a known pathological liar and antagonist as his "mentor".

You can try to toss the "lie" ball back and forth all you want, PuppetBoy, but so far all you've done is that...

Now..back to your comment about the truth setting you free...Take some of your own advice, Brain, and pony up some facts and evidence and you can say "I told you so"...Otherwise I hold to MY claim that all YOU told were lies. So far YOU are proving ME right...Thanks.

Oh, no! Brain! Don't be sorry! You've HAVE "lived up to (my)
expectations", and MORE, for which >>I<< am sorry to say!

Now...if you'd just pony up some evidence to back up all of the
silly claims you've made here, or be a man and just admit you've been
polishing your own brass and move on...either way you'd gain much more
respect than claiming Lennie as your "mentor"...THAT was nuts!

Lennie, you've had several lucid moments in this forum, and in
those moments I called you "Len", sincerely thanked you for your
participation/input, and moved on along.

I've acknowledged YOUR knowledge of radio theory, and even asked
you to conduct/participate in a forum that would have put you in the
drivers seat, license or not.

YOUR response was a weeks-long on-going rant about how you'd NOT
be "forced" to do such a thing, yet you couldn't understand why such a
fountain of knowledge such as yourself (a "professional") was scorned
by "amateurs".

Then you go right back to uttering the same transparent, easily
refuted mistruths about Amateur Radio in general and some Amateurs in
particular.

You're a person of unique and contradictory presentation, and
unfortunately for you none of the contradictions substantiate any of
what you have to say about the "some" of us or Amateur Radio in
general.

Sucks to be you, Lennie. I am sure "you" was a nice guy once
upon a time, but what's wound up here is anyhting but.

If you honestly and sincerely stuck to your assertion of "I am only here to civilly debate the Morse Code test issue", and actually had some argument other than "commercial ships and the Army don't use it", we might find soemthing to talk about.

YOU sank any hopes of that when you set in with the "Nazi", "jack-boot", etc etc rants.

Again...sucks to be you.

Back up and punt, Lennie...It's all you have left.

The reality of the situation is that if *your* telephone is clean and *your* stereo is clean in *your* house, a neighbor would have a far more difficult time of convincing anyone that the problem is *your* transmitter and not *their* poorly filtered consumer equipment. Often, changing the direction of an antenna may reduce the problem many dBs. It is much easier to work with a neighbor than to let things get that far out of hand.

Poor baby. ANGER affecting your thinking, is it?

Access BPL is going to affect ANYONE desiring to tune anything
in the HF and low-VHF spectrum.

You have some choices. Stay in here, do nothing about BPL, and
snarl at non-hams (like you always do); or, make your comments to
the FCC...free, quite quick, and you go on public record as one of
many who oppose Access BPL; or just let the ARRL do it, one
special-interest group against MANY others who want it.

You have this wonderful opportunity as a citizen to make your
feelings known to our government, freely, and without censorship.
But, you don't (at least not yet) and all you do in here is bitch and
snarl and try to arrogantly control others.

Play all you want with your mighty HF radios now. They might be
worthless in the future when BPL comes into your area and the
FCC has relaxed incidental RF radiation limits because not enough
citizens showed interest in the problem. Continue to snarl and
make nasty to selected individuals...that way you can say you are
"too busy" to comment on Access BPL because you were trying
to maintain ethnic cleansing of the newsgroup.

So long, Slobodan,

H2 = "Nomenclature" of the civilian equivalent of the military "HumVee,"
the ultimate SUV. :-) Good for off-road travel as-is, can make a
wonderful military-style mobile rig for ham "service" afficionados. Just
paint it flat olive or desert cammy color and install a huge manual code
key, plus a big "Official Ham Emergency Vehicle" sign on the side
right next to a copy of the mysterious sideways chevron used on all
military vehicles for visual ID.

Bye on the H2, thank you. :-)

Poor lad doesn't know where the Amana Colonies are. Those are in Iowa,
actually a collection of small towns settled by largely German immigrants
in the 1800s. Mostly a tourist enclave, they do have some delicious
midwest eating at many restaurants there...most restaurants having true
"all you can eat" menus with second+ helpings on entrees if you want.
See any AAA Guidebook. If you don't like midwest cooking, just go to
one of several smokehouses there and sample the many sausages.
Good desert wines, too.

Amana ranges are made in the central city (Amana, Iowa). Amana
microwave ovens are assembled in Mexico according to the lables on
our kitchen appliances installed in 2000. Amana bought the "radarange"
trademark and microwave range technology from Raytheon many years
ago.

Okay, now back to poor Mr. Foreign Service snarling and spewing
against those who won't bow and kiss his ring. :-)

> 'em?

Actually, Dave, the citizens' radio service was created by FCC in 1946
and the first licenses issued in 1947. See:

http://hamgallery.com/Tribute/W8PAL/

The first allocations were in the 460 MHz range, and were known as
Class A and Class B cb. (One class was voice and the other
radio-control). The more-popular ~27 MHz cb (Class C and Class D) were
authorized by FCC in 1958. FRS and GMRS are really the lineal
descendants of 1946-era cb.
>

1010. Straight Talk on Access BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-15 21:12:19 UTC
From: lenover21@aol.com
Message-ID: <20040315161219.05957.00001020@mb-m26.aol.com>
Source record: 89074

Access BPL poses a threat for all radio amateurs working HF through incidental RF radiation on HF and low VHF. That is national and will affect the majority of radio amateurs and other citizens making up about 96 percent of the USA population, those who live in urban and suburban residential areas.

Radio amateurs have several choices, all free, no obligations to do anything -

1. Do nothing, let someone else do the talking...such as the ARRL.

2. Make your comments known directly to the FCC on NPRM 04-29 via the ECFS. Do it doubly, on that and on ET Docket 04-37; 04-37 has the first document as the NPRM itself.

3. Sit in here and bitch and whine and snarl at others and make noises about "big money intrests" and "we are all doomed" and other excuses for not doing anything.

The FCC does NOT run any BPL system. It can't unless there is Congressional legislation made that allows them to that. Right now, all the FCC can do is to establish INCIDENTAL RF RADIATION limits on Access BPL systems. The FCC can regulate that and does so now on many electronic devices.

NPRM 04-29 as proposed does NOT allow any incidental RF radiation beyond that already established in Part 15, Title 47 C.F.R. If you don't know what that means, you can get a free download of Part 15 from the GPO link on the FCC website. If you don't know what that means, ask someone who does for an education in the subject. Whether realizing it or not, everyone is living with those Part 15 incidental RF radiation limits right now.

The FCC cannot do anything against any Access BPL system except regulate that incidental RF. The FCC can't stop a system from being installed, can't halt planning, or anything else. What you CAN do is make sure the Part 15 limits REMAIN AS THEY ARE. LOWER the limits for less HF noise if you can...but know what you are talking about when you request that.

Nobody is going to stop BPL. It is there. It can be there. What CAN be done is to demand stringent measurement and enforcement rules on incidental RF radiation. Make it tough enough to force the Access BPL proponents to spend money and effort on PROOF of PERFORMANCE of the eventual huge antenna array of an installed Access BPL system. You can force the enactment of regulations that might make BPL proponents think twice about

installing one.

No Access BPL system is running KiloWatts of power into those
power lines. It iis relatively low level. But, the enormous length
and breadth of the electric power distribution network already there
can be a gigantic antenna larger than any that has existed in radio
at any time. While those power lines work fine at 60 cycles, every
discontinuity in those lines, every amplifier along the way, every
coupling device, is a potential point-source for incidental RF radiation
from about 4 to 80 MHz. All those potential radiation points will add
to the HF and low VHF RF radiation. In an area of 50,000 population
there may be 10,000 possibilities for incidental RF radiation, not just
in the Access BPL equipment but every single power line splice and
change in wire spacing. All of those things ADD RF noise power to
the interference field stretching to many square miles.

It is the task of the FCC to HOLD DOWN the incidental RF radiation
levels and KEEP them down. You have to tell them that.

The ARRL can't do it alone. They are only one special interest group
competing with MANY special interest groups, most of whom are
Access BPL proponents. The FCC does listen to CITIZENS. It must
since that is the law. The FCC WILL "listen" to you via the ECFS
as a CITIZEN of the USA.

You aren't going to win many points babbling pseudo-patriotic stuff
about "amateur radio vital to Homeland Security and for emergencies."
The FCC knows damn well that hams are basically hobbyists having
fun with radios. They've known that for a long time. Don't kid yourself
differently or to others. We are all CITIZENS. All citizens are vital to
this nation. ALL deserve to be heard. Make yourself heard and
you WILL be listened to.

Your choice on what to do. I've made my Comment to the FCC on
NPRM 04-29. Will any of you do the same?

I would have thought our resident expert on all things radio would have
known that.

Oh, don't worry. Your summary of Len's likely actions will pop up from
time to time as long as he acts as he does. The humorous part of
dealing with Leonard is that he just can't see is that he is guilty of
those things of which he accuses others. If someone like him moved next
door to me, I'd give serious thought to planting a "For Sale" sign on my
lawn--or maybe I'd just paint my house lavender and put in a yard full
of pink plastic flamingos.

I got home from work about an hour ago. While I was there I checked through the records for interference issues the station has had in the past. There were a few to be sure. Some of them were found to be simple imaging in cheap, single conversion receivers. There was one incident where the station had a bad trap which resulted in several complaints all at once, but the problem was quickly fixed. However, not one complaint was about RFI in a cordless phone, and no complaints were found where the cause was unintentional rectification. Mind you that this station transmits many kilowatts and that residents live less than a 1/4 mile from the tower, many of whom have televisions, cordless phones, and all the other electronic devices which hams claim are responsible for receiving interference due to 'poor filtering'.

On the other hand, the station has had incidents where it was the -receiver- of RFI despite a level of filtering above and beyond what should be required to prevent interference (much of which I have installed myself). Filtering does nothing to stop RFI when the transmitter is dirty. I have to prove this fact to at least a couple hams each year by parking the van outside their house and showing them their spurs on the spectrum analyzer. And these are hams who swear up and down that their signal is clean and that the problem is with the neighbors equipment. Most of them clean up their act in a hurry. The rest get a complaint filed with the FCC by the station because they are interfering with the station's transmission.

My point is that interference is almost always caused by excessive harmonic emissions; i.e, poor filtering at the transmitter, not at the receiver (or device receiving the interference) as most hams claim is the case.

BTW, I should point out that we at the station take care of our listeners and respond to complaints of interference to our signal wherever they occur (within our contour). Many times that interference is caused by radio operators, legal or not. We determine the nature of the interference then attempt to resolve it. If it is caused by a radio operator that is unwilling to clean up his act then the station files a complaint with the FCC. We get a better response from the

FCC than do a few angry neighbors because the station pays a lot of money to stay on the air, and the FCC responds to money, not people.

I bought my HT and some other items there, and AFAIR everything shipped promptly.

My one complaint is that their online "shopping basket" times out very quickly: a couple of times I needed to check something and by the time I came back to continue shopping my basket was empty again.

My biggest purchases have been from HRO, but their prices are sometimes higher.

The initial court decision can and may well be reversed on appeal.
I have not read of any case being upheld on local jurisdiction vs
federal preemption when it gets to the feds.

> The case must go through
> the process of adjudication; i.e, the appeals courts. Most such cases can
be
> appealed, one exception being Small Claims Courts in WA which doesn't
allow

public
> (as would be the case with a public nuisance) you can bet that the case

will be
> quickly and quietly dropped. It has happened before and it will happen
again.

Dropped by who? If I am being sued and my defense is federal preemption,
then why would I drop the case? The FCC doesn't even have to be
a direct party to the case for the issue of federal preemption to be
argued.

> To be blunt: as long as fat, lazy hams keep causing interference

Guess that shows your true colors...

> under the

So...the situation that a law exists can just be that the law hasn't
been challenged.

> so it looks like the FCC's fear tactics aren't working
> anymore. If the FCC doesn't start enforcing violations by otherwise legal
hams
> they run the risk of forfeiting some jurisdiction to lower authorities as
they
> did with HR2346.

Yet I find no such "doom and gloom" predictions or examples being
recorded in ham publications. The fact that some ill advised local
government
enacts a piece of law that "outlaws" interference doesn't
makethe law immune to being overturned on the preemption
basis. The argument for pre-emption, if made, doesn't even
require the FCC to do so. the defendent's attorney can and likely
would raise the argument.

> So believe what you want about the law -- the facts are that people aren't
going
> to give up their entertainment, electronic conveniences and basic
communications

> devices just because some smart-ass ham thinks the feds will always be
there to

Such a person should also know that FCC will accept comments up to 45 days from
the date an NPRM is published in the federal register.

Such a person should also know that FCC has been doing the comment thing for
decades. Back in the 60s FCC got over 6000 comments to the various "incentive
licensing" proposals. This was back in the days when such comments were usually
manually typed and mailed - no PCs, no internet, no emails. This was
back when the number of US hams was about 40% of what it is today.

And you'd think such a person would have filed comments on 98-143 during the
comment period, not the reply comment period, and done it electronically. But
hey, even professionals have computer trouble.

It would be obvious to anyone with more than three working brain cells
that the statement applies to the period in which I hold a valid ham
radio operator's license.

And how in your infinite witless wisdom did you get out of this that I said that cells phones are always down and my ham radio is always up? I w i l l t y p e t h i s v e r y s l o o o o l y s o t r y t o k e e p u p. I s a i d, *W H E N* t h e c e l l n e t w o r k i s d o w n. The statement, *WHEN* it is down, implys that it is sometimes up.

Oh wow! I would think that something like a scientific expedition would want some reliable communication that you can use anywhere and count on at all times, like cell phones. Right witless willie?

Oh?

Still waiting for you to answer up to the offer to go around the
block a couple times, Lennie...I even offered to run it with my field
pack on, but I guess your assertions of my "pudginess" and lack of
fitness were yet more NG fodder meant to deceive the lay reader.

So how about 5 times around your house? The car? How about one
of those inflatable kiddie swimming pools? I'll throw a couple extra
bricks into my rucksack to help level the playing field. (Don't
worry...I WON'T throw them at you...all temptations to the
contrary...)

Steve, K4YZ

1038. Access BPL NPRM versus NOI

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-16 06:00:56 UTC
From: lenover21@aol.com
Message-ID: <20040316010056.05539.00004773@mb-m16.aol.com>
Source record: 89153

It's generally agreed that Access BPL will be a bad thing in any urban radio environment. It's also apparent that way too many commenters are trying to voice their grievances to the FCC in the wrong place.

FCC 04-29, the NPRM or Notice of Proposed Rule Making, was released on 23 February 2004 with a 45 day period for Comments and a total 75 day period for Replies to Comments.

Once an NPRM is released, any previous documentation (comments, threats, entreaties, etc.) on the same subject are essentially ignored by the FCC for the purposes of making new rules indicated in the NPRM. While the website location may remain open for comment on a subject long after the subject is closed, those remain just bits on a very large hard drive and do not have to be looked at by the FCC for any sort of rulemaking.

ET Docket 03-104 was an NOI or Notice Of Inquiry request by the FCC to get suggested standards and testing for Broadband over Power Lines (now called "Access BPL"). By the FCC's format, the first two digits indicate the year of release (in that case 2003). The comment and reply-to-comment period on 03-104 is long over, yet radio amateurs keep posting on 03-104, even after an NPRM has been released nearly a month before.

03-104 now has 5,713 documents in its ECFS section as of Sunday, 14 March 2004. At least 600 of those were submitted AFTER the initial notice of the NPRM (12 February 2004). Any further input at 03-104 is not going to do any good. According to the 12 Feb 04 Notice, the Docket number is 04-37. The NPRM is 04-29. As of Sunday, 14 Mar 04, the ECFS listings indicate the following number of documents on the two dockets -

04-29: 5 04-37: 21

If anyone REALLY wants to make their voice heard on the BPL subject, the above are the two places to file (I don't know yet why the initial notice said "docket 04-37" but my Comment went to both and were indicated as accepted).

The R&O (Report and Order) that established the latest Restructuring in U.S. amateur radio was FCC 99-412 and was effective 30 Dec 99. By the ECFS listings on the NPRM 98-143, 218 sent in Comments AFTER that date. All commentary on 98-143 was cut off on 15 Jan 99 but many continued on regardless. The last person to "file" comments on 98-143 was Peter Alterman, PhD, W2CDO, document accepted 24 Sep 03 (!),

over two and a half years AFTER the R&O. Does anyone think
that 200+ comments filed on an NPRM after an R&O has been
issued will somehow make an R&O go away?

No one HAS to file anything on any subject with the FCC. Hams
can just let the ARRL do all the work for them and go back to
playing with their radios. However, anyone who really and truly
cares to comment as a thinking, independent citizen has an
excellent opportunity to speak DIRECTLY to our government.

There's no real delay with electronic filing. But...there's only about
two weeks left for initial Comments and a month more for Reply to
Comments and back-and-forth on same. Time doesn't stand still
and a minority membership organization can't do all the effective
speaking for you.

The alternative is to do NOTHING. Very safe, no effort required.
But, you don't qualify all the subsequent whines and crying about
the awful interference on HF when you did NOTHING. You did
NOTHING even if you sit around high-fiving all the other do-nothing
hams about your self-perceived wonderfulness and glorious
"service" to something or other.

CB was created 46 years ago and hams of today are still crying
and whining and P&Ming about the FCC "stealing away 'their' band"
even though they may not have been born when CB was.

DO SOMETHING. Tell the government what you think.

LHA / WMD

You do, of course, recognize that "fucking" is against the law now, as an expression of intense emotion, such as a plate breaking and severing several really important arteries while doing the dishes.

Laws specifically require that the word "fucking" not be used. It is written down and law, that btw, you as a citizen of the U.S. (I assume you are a citizen and are required to be informed of these laws) are required to have read and understood. According to law, you must have read and understand this law. It is extremely important that you understand the law about words you can't say. In the case you have not read this law as according to the law every citizen of the United States is assumed by the courts to have read, you face very severe fines and penalties for using the word "fucking".

Somebody has to make clear the laws that every citizen of the U.S. is expected to know. Assumed to have read.

Usage of the word "fucking" is against the law. A law that is important to people in their daily conversations and expressions of extreme emotion, distress, or agony.

Since it may be a law, I felt you should be informed of this law as required of any law-abiding citizen of the United States. It is my responsibility that I should inform people of what they are required to know that the word "fucking" is no longer lawful.

I'm not actually super positive that this is in reality a law at this time, but, in order to prevent anyone from being arrested for using the word "fucking" I will treat it as a word that is unlawful and hence every american should understand is against the law. Which is, btw, required by law, in the United States of America.

Having performed my civic and lawful duty in informing you of this fact,
I will now rest easier, knowing that you have been informed of the
"fucking" law.

TheNIGHTCRAWLER
(I copyright nothing at this time. Have fun, Anonymous.)

> > Sure I can. When you and Lennie make idiotic postsings, I present
> > information or evidence that you are wrong. No problem.
>
> Yeh, sure you can - when you're on your meds. Rest of the time you go berzerk.

"...you go bezerk." OK...define "bezerk"...

You mean when I nag you about presenting SOME evidence of
factuality of YOUR assertions (none of which has been
forthcoming)...???

Or do you mean when I present yet another bit of third-party
corroboration that I am indeed correct and your or Scummy is wrong?

Perhaps you mean when I stand up to liars and bullies whio
intentionally misrepresent the character of Amateur Radio in a public
forum...?!?!

So far you only make claims that I am "nuts", yet cannot present
any documentation of qualification in any discipline of pyschiatry
that would substantiate your claim.

You've childishly tried to suggest that I was trying to
physically harm you yet refused to provide any proof of that.

You have yet to substantiate any of your claims of experience as
a "DXer" from Somalia. All we asked for was the callsign of just ONE
person who could verify having worked you....ONE QSL card. Heck,
Brain...I still have some QSL's from 1981 when I was KA6CM/JR6. You
were in Somalia...WHEN...???

So...If there's anyone here who is "nuts", I think it's the
self-proclaimed DX-operator with no evidence of that operation....And
if anyone is "bezerk", it's the person who makes unsubstantiated
claims of impropriety against another with no corroboration, which is
what YOUR 'assertions" are...

Try again, PuppetBoy....And tell Lennie to be a bit more subtle
pulling your strings...Maybe next time it won't be so obvious.
(yeeeeah...rrrrrrright)

Better yet, be a man and try moving your lips WITHOUT his input.

Yessir. Maybe 1950 or so and I was prowling Arch around Tenth and one
of those radio row junk shops had it's usual pile lined up on the
sidewalk. In addition to the half ton of WW2 surplus goodies there
were several clean new-looking boxes which, in retrospect, were along
the lines of the Gonset Communicators and/or Benton Harbor Lunchboxes.
Nice looking pieces, mics included, had short whips atop the boxes.
Looked like complete two-way radios to me and were marked $5 each,
same $$ as all the ARC-5 boxes. I asked the guy what they were. His
exact words are long lost of course but the gist of it was that they
were for a new kind of two-way radio band everybody could use without
having to take any FCC tests at all. "WHAT??". Unthinkable! "What
frequencies do they run on?" "UHF crap, 400 Mhz or something. Don't
work worth a damn for more than a few blocks away, don't bother kid."
I didn't.

Then why make such broad claims?

You said, "I can say that I have never been without ham radio
capability."

Now you're telling me that you really meant to say, "For as long as I
have been a licensed amateur radio operator, I have never been without
ham radio capability."

I think Dick/W0EX used to beat the "I've never been w/o, I'm always
ready for an emergency" drum. But when Hans invited him to operate
his favorite mode (cw), Dick was nowhere to be heard.

So, I'll let you slide on the unlicensed period of your life not being
with ham radio capability. This time. Just don't go broad brushing
your magnificent capabilities again.

Just be sure that should Hans invite you to a CW QSO, you'll be there,
because "For as long as I have been a licensed amateur radio operator,
I have never been without ham radio capability."

;^)

>did with HR2346.

Woah! I think it's time to look at things from a different
perspective. One of the main reasons why the FCC, as you put it,
became "inattentive", has to do with the fact that the great majority
of RFI complaints are the fault of the electronic widget being
interfered with. Since the emphasis has been on producing things
cheaply, and with the minimum amount of engineering, it should not be
surprising that these devices are made so poorly with respect to R.F.
immunity. Hams are not so much getting "cocky" as they are becoming
increasingly defensive as more and more RFI problems are being leveled
at their feet which didn't exist 10 or 15 years ago. The FCC should
mandate tougher shielding specs for consumer widgets, and the majority
of RFI problems would disappear.

You can argue the relative difference between a person's "right" to
enjoy their radio hobby versus another's "right" to enjoy internet
porn. But if the ham is clean (and they usually are), it's not his
problem directly.

>So believe what you want about the law -- the facts are that people aren't going
>to give up their entertainment, electronic conveniences and basic communications
>devices just because some smart-ass ham thinks the feds will always be there to
>defend him even when he's too lazy to clean up his signal.

This is not the case in most instances. You have to remember these are
hams, not class "C" amp running CB'ers. Most hams understand RFI to
some degree, and most ham equipment is manufactured to comply with
spurious emissions requirements. Hams will do what they can to clean
up their own act. But once they've done all that they can do on their
end, if the problem's still there, then what?

> They won't. And they
>won't because this country is governed by the majority of the people, not a few

>holier-than-thou hams.

You might want to re-examine your conjecture there. While I would agree that logically the rule of the majority would make the most sense. But especially in the last several years, there have been increasingly small, but highly vocal, special interest lobbyists which have managed to thwart the wishes of the majority, and have been responsible for laws which protect the "rights" of certain minorities above and beyond what the majority enjoys. Take a look at political correctness if you have any doubts.

The problem is with the cheap Chinese produced electronic devices. Something needs to be done to minimize their susceptibility to RFI. Trying to sweep the problem of RFI under the rug (and thereby saving XYZ company the cost of making RFI resistant devices) by persecuting legally operating hams is not , IMHO, the right solution. Remember, that what they do to hams, will also trickle down to CBers, since the RFI potential is worse on the CB band, with the preponderance of illegally operating stations who are there.

But Jim's point is valid. If your transmitter is truly "dirty", then
you will interfere with your own equipment as well as any neighbors.
Harmonics do not discriminate. If you can demonstrate to your
neighbors that you can watch TV, listen to the stereo, and surf the
internet with RFI immunity, it lets the air out of their balloon.

On the other hand, I used to live about a mile and a half away from
both an FM radio station's transmitter, a directionally phased AM
broadcast transmitter and a "low power" AM broadcast transmitter.
Those things used to come though all sorts of poorly shielded stuff.
It wasn't the stations' fault, we were just getting hammered with a
large RF field. Every now and then the phone company would have to
come out and tighten their connections, as they would act like an
antenna, and a poor joint would become a diode and we'd have a radio
station in the background when talking on the phone. It wasn't a dirty
transmitter. It was near field rectification, and RF overload. The

plus side of all this, was that the local area was so used to dealing
with the "bleed" from the commercial stations, that RFI shielding was
a priority for utilities, and that worked in my favor as a CBer and
ham.

>

>
>My point is that interference is almost always caused by excessive harmonic
>emissions; i.e, poor filtering at the transmitter, not at the receiver (or
>device receiving the interference) as most hams claim is the case.

I've been doing radio for over 30 years now and I've seen exactly the
opposite. Most of the cases (and the FCC database backs this up) of
RFI are the fault of the receiving equipment. When you run a squeaky
clean 4 watt CB, and 100 watt H.F. ham gear and you still have
interference complaints, with all filtering, grounding, and proper
antenna decoupling in place, it's usually not the ham's fault. If
you're going to fight the fight, it's helpful to have all of your
facts straight before you do.

>BTW, I should point out that we at the station take care of our listeners and
>respond to complaints of interference to our signal wherever they occur (within

That's not what I have experienced. If these cheap devices are so suseptible to
fundamental RF transmissions, how can so many of them be used without trouble
next to radio and television stations? The majority of interference is caused to
televisions, and cordless phones ring in at second place on the list (excuse the
pun). They work on frequencies that extend from low VHF up to about 1 GHz, yet
there are almost no reports of interference above VHF. In fact, most of the
interference happens in the low TV channels and low-VHF cordless phones. Not
suprisingly, this is the area where harmonics from high HF are strongest. And I
know for a fact that a ham can run 1kW on HF and not cause interference to
televisions, cordless phones, radios, or just about anything else accused of
having poor RFI rejection because I have seen more than one station that does.
And again, in the course of my job I have met more than a couple hams who
sincerly thought their signal was 'clean' only to find out it wasn't.

> Hams are not so much getting "cocky" as they are becoming
>increasingly defensive as more and more RFI problems are being leveled
>at their feet which didn't exist 10 or 15 years ago. The FCC should
>mandate tougher shielding specs for consumer widgets, and the majority

>of RFI problems would disappear.

There are indeed more and more RFI complaints than there were 10, 20, or even 30 years ago during the CB craze. This is not a matter of the quality of the devices people have in their homes, but the sheer number of them that are available these days compared to years ago. There was a time when a color television was a luxury, yet nowdays people have TV's in almost every room. Cordless phones were almost non-existent in the 70's, yet they are almost standard issue in todays appliance market. But interference still occured to these devices in the past just it does today. They are no more suseptible to RFI than they were 30 years ago -- on the contrary, since the frequencies used are much higher, cable TV is much more popular, signal processing is more advanced and the bandwidth response of tuners is better than ever, these devices actually receive -less- interference than ever before. But they are -not- immune to harmonics that land on their operating frequencies, which, in my experience, is the cause of almost all of the interference that is caused by intentional radio transmissions.

(I should point out that -most- radio and TV interference is not caused by radio stations of any sort, but by light-dimmers, motor speed controls, computer power supplies, wall-warts, coffee-makers, and a myriad of other switching devices that connect directly to the power lines. But of the cases where the source was clearly a radio station, the cause was almost always harmonics.)

>You can argue the relative difference between a person's "right" to
>enjoy their radio hobby versus another's "right" to enjoy internet
>porn. But if the ham is clean (and they usually are), it's not his
>problem directly.

I can argue that a person has the right to peaceful use and enjoyment of their property and premises. And I'm not saying that all, or even most, hams run a dirty station. In fact I believe quite the opposite. It's just a few hams that are either too lazy to check their signal or too ignorant to realize the possibility of harmonics.

>>So believe what you want about the law -- the facts are that people aren't going

If the ham has done everything reasonably possible on his end, it's very likely the problem will be no more. But if it -still- exists then the neighbor must decide whether he is willing to sacrifice his everyday appliances so the ham can play with his radio. Federal law says the neighbor is screwed. Many local and state laws state that the neighbor does not have to put up with such intrusions.

This is a conflict that must eventually be solved in the courts.

I agree with you 100%, and one of those "special interest" groups is the ARRL. They have done more to defend those that cause interference than they have to help resolve the problem to the satisfaction of both the hams -and- the general public.

>The problem is with the cheap Chinese produced electronic devices.
>Something needs to be done to minimize their susceptibility to RFI.

Honestly, I don't believe that at all. I have yet to find one of these devices that are ultra-suseptible to fundamentals on HF. If someone has an example, please post it so I can get one and test it for myself.

>Trying to sweep the problem of RFI under the rug (and thereby saving

>illegally operating stations who are there.

I think it's the other way around -- it is the illegal CBers that started the "I don't care" attitude towards interference, and that attitude is being adopted by some in the ham community. And yes, I believe the illegal CB problem far outweighs the problems caused by a few asshole hams that learn their operating practices from the keyclowns. But when good hams start defending the bad hams by wielding the sword of preemption, you can bet that the keyclowns will do the same and the problem in both arenas will just get worse.

>
>Apologies...should have said "criminal" law.

Civil -and- criminal law. If you file a civil suit, it is filed and tried in a
court of LAW. Codified laws usually include both civil and criminal remedies for
various violations, and many times even for the same violation.

>> >> And now I'll ask -you- if you can provide

>
>Excuse me. just what does that mean?

It means that if the neighbors are being bothered by interference from a dirty ham (or even an illegal operator), and the FCC chooses to ignore the complaints as they do most of the time, federal law says the neighbors are screwed.

>> Now any judge has the right

In WA you can sue in Small Claims court on the grounds of causing, maintaining, or failing to abate a public or private nuisance, provided the requested damages do not exceed the limits of the court. That's where the case I quoted was tried.

>> But on appeal there arises another thorn in the

>Dropped by who? If I am being sued and my defense is federal preemption,
>then why would I drop the case? The FCC doesn't even have to be
>a direct party to the case for the issue of federal preemption to be
>argued.

Try it the other way around -- suppose a community prosecutes a ham for causing a nuisance, but the case is dismissed on the grounds of federal preemption. The case doesn't need to stop there, as the preemption law can be challenged by the community. If they have a good case, the FCC may not take the chance of losing and will most likely drop the case or settle out-of-court. That's their MO, and that's why you have rarely seen any case challenging the constitutionality of their laws get anywhere near the US Supreme Court.

>> To be blunt: as long as fat, lazy hams keep causing interference

Assuming the attorney knows anything about FCC regs. Regardless, the judge can
rule any law as unconstitutional. It has been done many times before. Whether
that judgement holds up on appeal is another ball of twine.

>a priority for utilities, and that worked in my favor as a CBer and
>ham.

I run into the same issues. In fact, my house sits smack-dab center of an interference lobe from a two-tower Class A station, and I can even pick it up on my scope. But it doesn't cause any interference with anything else, not even any of the sensitive audio equipment I service from time to time. If an electrical connection is corroded, that may indeed cause interference from a local source via unintentional rectification, but I haven't found that to happen nearly as often as some people claim. This discrepancy may be due to the larger wavelength of the broadcasted signal from the station, but I haven't seen any evidence to support that conclusion, either.

>>On the other hand, the station has had incidents where it was the -receiver- of

No it doesn't.

>> I have to prove this fact to
>>at least a couple hams each year by parking the van outside their house and
>>showing them their spurs on the spectrum analyzer.
>
>I have my own analyzer and my station IS clean. Now what?

Are your neighbors picking up your signal?

Finding the source of RFI is just like troubleshooting any other piece of electronic equipment. Take your spectrum analyzer to where the interference is occuring -- it doesn't do any good to measure signal strength where it doesn't matter. Also, what are the devices that are receiving the interference? If you bring those same devices into your home (assuming you don't have interference with your own stuff, as per Bill's example), does it still pick up RFI? If you add a device to filter the fundamental does it still receive interference? Is the interference entering the device from the antenna, the power line, or some other unknown route? Is there RF on your power feed? Does either house have aluminum siding? If the RFI is coming through the TV, is it interfering with the audio or video, or both?

Some of these might sound like silly questions, but putting a bunch of silly answers together can draw a very different picture. And it's very possible that the device or devices in question simply need repair. But since I don't have the whole picture I can't say one way or the other.

>> And these are hams who swear
>>up and down that their signal is clean and that the problem is with the
>>neighbors equipment.
>
>It usually is, trust me.

You are right, it usually is. But a few aren't. Those are the one's I was talking about.

I thought I said this before, but I'll say it again: I don't think that all hams, or even most hams, run dirty stations. I believe most of them -do- run clean. The problem, as I stated before, is a few hams that don't have a clue and are going to ruin it for the good ones. But then again, I'm not a ham and I'm not about to defend any of them, good or bad. I see things from a bit different perspective because of my job, and until you have done the same job for a few years I don't expect you to see it the same way. But I -would- expect you to consider what I have to say because it is what I have seen first-hand. And what I have seen is that unintentional rectification is a far less common source of interference than poorly filtered transmitters. You may have seen different, and that's fine. Our tower cranks out several thousand watts 24/7, and one would think that with that kind of power unintentional rectification would be a major problem. It isn't, at least not here. Maybe it's a geographical thing....

>> Most of them clean up their act in a hurry.
>

>you're going to fight the fight, it's helpful to have all of your
>facts straight before you do.

The FCC 'investigators' rarely visit the scene to determine the cause of interference. If you read those cases in the FCC database they simply reflect

what is claimed by one party or the other, but usually by the ham. Check the records for interference claims regarding commercial stations and you will see a very different picture.

>>BTW, I should point out that we at the station take care of our listeners and
>>respond to complaints of interference to our signal wherever they occur (within
>>our contour).
>
>I would propose that your motives are less altruistic and more to do
>with market impact.

Damn straight! It's good PR, great WOM advertising, and it's well within the station's rights to try to resolve any source of interference to its signal. Actually, the campaign started because of a couple broadcast pirates that were messing up the band. Go figure....

>> Many times that interference is caused by radio operators, legal
>>or not. We determine the nature of the interference then attempt to resolve it.
>>If it is caused by a radio operator that is unwilling to clean up his act then
>>the station files a complaint with the FCC.
>
>Unwilling or unable? It's tough to solve a problem that's not yours to
>solve. Other than giving up your radio hobby.

Unwilling. I haven't seen a case yet where a ham (or even a keyclown) wasn't able to keep his signal off the TV, radio or cordless phones if he made the effort. Mind you that there are still some old single-conversion radios that seemingly scan for the most obnoxious RFI on the band, and there is nothing you can do about that except replace them. Fortunately, they are usually old and cheap.

And the problem -is- your's to solve if you are the source. That's not law, it's just decent social behavior. If we choose to live communities, we should really learn how to respect the others in the community instead of shoving a federal regulation in their face and saying "tough titties" (that may not be the way it is intended, but that's the way it sounds to the other guy).

>> We get a better response from the
>>FCC than do a few angry neighbors because the station pays a lot of money to
>>stay on the air, and the FCC responds to money, not people.

>That's not what I have experienced. If these cheap devices are so suseptible to
>fundamental RF transmissions, how can so many of them be used without trouble
>next to radio and television stations?

That depends. I've had cheap $5 phones which picked up radio stations
faintly in the background, while in use. Switching to a more
"bulletproof" phone eliminated the problem.

Interference from a TV station would be harder to ascertain. The
greatest power output in on the video carrier, which, when received by
a simple diode detection (As in RFI rectification), sound like a
buzzing noise, not too much different than electrical interference.
Frequency modulated audio does not rectify well, in this scheme and
will also not usually be discernable as intelligent audio broadcasts,

unless it is especially strong, or there is some frequency determining component which promotes slope detection in the face of the FM modulation.

> The majority of interference is caused to
>televisions, and cordless phones ring in at second place on the list (excuse the
>pun). They work on frequencies that extend from low VHF up to about 1 GHz, yet
>there are almost no reports of interference above VHF. In fact, most of the
>interference happens in the low TV channels and low-VHF cordless phones.

I don't know about the latest generation of 2.4 GHz digital cordless phones, but back a few years, I had a neighbor who was 5 doors down the street who claimed he could hear me on his 49 Mhz cordless phone. I was running a bone stock 4 watt CB, which was spectrally clean. You might be able to make a case that the near field was especially strong due to antenna design issues. But even so, it should not have brought that phone to its knees, if it was properly shielded.

>Not
>suprisingly, this is the area where harmonics from high HF are strongest.

And ground wave propagation is also the most effective.

>And I
>know for a fact that a ham can run 1kW on HF and not cause interference to
>televisions, cordless phones, radios, or just about anything else accused of
>having poor RFI rejection because I have seen more than one station that does.

I can run 100 watts and not interfere with neighbor "A", but I destroy neighbor "B"'s TV. Neighbor B has a Sony TV, which are notorious for RFI issues.

>And again, in the course of my job I have met more than a couple hams who
>sincerly thought their signal was 'clean' only to find out it wasn't.

I don't doubt that. Not all hams are RF savvy, even though they should be.

>> Hams are not so much getting "cocky" as they are becoming

>There are indeed more and more RFI complaints than there were 10, 20, or even 30
>years ago during the CB craze. This is not a matter of the quality of the
>devices people have in their homes, but the sheer number of them that are
>available these days compared to years ago.

They are both true. There are more devices AND they are made with less regard for RFI protection.

Case in point, I have a Fisher tube-type stereo receiver/amp, which
was made in the late 60's. I could run all the power I ever wanted on
any band, and there was nary a whisper out of that tube stereo. I
recently replaced it for a "newfangled" JVC with a remote control,
digital tuning, and all sorts of bells and whistles. My 4 watt CB
destroys it. My 25 Watt 6 meter station blanks out the music
(Fortunately it's FM so I don't get that awful feedback). Even my 2
meter SSB station gets into it. Fortunately I don't operate the stereo
and the radios at the same time, or I'd have to think seriously about
going back to my old stereo.

>There was a time when a color television was a luxury,

And hams running on 80 meters, close to the colorburst frequency of a
TV would make the color vanish. A common problem back then.

>yet nowdays people have TV's in almost every room.
>Cordless phones were almost non-existent in the 70's, yet they are almost
>standard issue in todays appliance market. But interference still occured to
>these devices in the past just it does today.

Some were more prone to RFI than others. Just changing brands could
often cure an RFI problem.

>They are no more suseptible to RFI
>than they were 30 years ago -- on the contrary, since the frequencies used are
>much higher, cable TV is much more popular, signal processing is more advanced
>and the bandwidth response of tuners is better than ever, these devices actually
>receive -less- interference than ever before.

Yes and no. By having a TV receive through a shielded cable rather
than from an external TV antenna, reduces the potential for RF front
end overload, it does little to prevent RFI which creeps in through
the A.C. line cord. Not all RFI comes in through the tuner.

>But they are -not- immune to
>harmonics that land on their operating frequencies, which, in my experience, is
>the cause of almost all of the interference that is caused by intentional radio
>transmissions.

You're right, you can't expect a TV to reject an on-channel harmonic.
But a properly operating radio should be operating with a -40 to -60
(depending on year of manufacture) dbc harmonic suppression. At 100
watts, a -50 dbc harmonic is 1 mW of radiated power. Not much in the
grand scheme of things, and certainly no match for the grade A
coverage footprint of a 50 KW TV station.

>(I should point out that -most- radio and TV interference is not caused by radio
>stations of any sort, but by light-dimmers, motor speed controls, computer power
>supplies, wall-warts, coffee-makers, and a myriad of other switching devices
>that connect directly to the power lines.

On that point, I also agree. I once ran across a poorly designed Radio
Shack TV signal preamp which had a nasty tendency to self oscillate in

the 220 Mhz region. Every now and then it would drift into the input
of our 220 repeater. Talk about a bugger to pin down.

>But of the cases where the source was
>clearly a radio station, the cause was almost always harmonics.)

Then I guess we have to agree to disagree, as I have had to mediate on
several radio op's behalf to prove that their stations were not
generating the interference (I was the only one with test equipment).
The FCC's website has documentation on RFI issues and what consumers
should do to reduce near field rectification and front end overload.
In many cases, a high pass filter needed to be added to the TV to
eliminate the problem. A.C. line interference was cured by wrapping a
A.C. line cord around a toroidal ferrite core.

I had a neighbor who, back in 1983, complained to the FCC about my
station. It seems that he was happy as a pig in mud, until one day his
TV died and he bought a new one. All of a sudden he started hearing me
loud and clear though the speaker in the TV. He swore that I was
suddenly running "big power". He just didn't want to make the
connection that the problem didn't start until he got a new TV. The
FCC sent me a letter informing me that they had received a complaint.
I wisely sent them my ham call, even though I knew that it was the CB
that my neighbor was hearing. The FCC, once they realized that I was a
ham, literally let the matter drop. They referred me to a "TVI
committee" (A group of hams who investigate RFI claims), but once we
made initial contact, they dropped the ball, and I never heard another
word.

>

>play with his radio. Federal law says the neighbor is screwed. Many local and
>state laws state that the neighbor does not have to put up with such intrusions.
>This is a conflict that must eventually be solved in the courts.

And that is the crux of the matter. If a case can be made that the
fault of the interference is caused by a dirty transmitter, then it
becomes an easy case to mediate. If, on the other hand, the ham (or
CBer) has done everything he can to make his station clean, but the
neighbor is the victim of a poorly designed (Even if it's a $5000 HD
TV) consumer product, then the only thing the ham can do, is not
transmit. That may be an acceptable solution to the neighbor, but most
hams love their radio as much as other people love TV, so it's back to
who's rights carry more weight. That's not a case I'd want the courts
to set precedent on, as they might just decide that mindless drivel
such as "American Idol" or the umpteenth episode of "Friends" deserves
more consideration than someone looking to further his electronics
knowledge through the art of radio.

>>> They won't. And they

>They have done more to defend those that cause interference than they have to
>help resolve the problem to the satisfaction of both the hams -and- the general
>public.

They defend hams against "witch hunts", where the radio operator is
automatically painted as a "bad guy" simply because he enjoys a

different venue for his pass time. You cannot expect the non-technical consumer to understand the nuances of RFI. All they know is that when the ham next door transmits, he kills their "XYZ device", therefore it must be his fault.

>>The problem is with the cheap Chinese produced electronic devices.
>>Something needs to be done to minimize their susceptibility to RFI.

>
>
>I think it's the other way around -- it is the illegal CBers that started the "I
>don't care" attitude towards interference, and that attitude is being adopted by
>some in the ham community.

That has happened largely because most "normal" consumers don't know the difference between a ham and a CB'er. CB'ers have gotten a bad rap due to their blatant disregard of the rules and their penchant for operating high power and dirty amplifiers. In the consumer's mind Cb'er = Ham. I've had people tell me that I can't run 100 watts on the ham bands, and that they were going to call the FCC about it. Hams are starting to get tired of being lumped in with CB'ers, especially when there may be both an illegally running CB'er AND a ham in the same neighborhood. Guess which one is the likely cause of interference?

>And yes, I believe the illegal CB problem far
>outweighs the problems caused by a few asshole hams that learn their operating
>practices from the keyclowns.

Because in all likelihood, they used to be keyclowns themselves.

> But when good hams start defending the bad hams by
>wielding the sword of preemption, you can bet that the keyclowns will do the
>same and the problem in both arenas will just get worse.

PRB-1 does not apply to CB'ers, nor does many of the preemptions that were cited previously. CB'ers should be allowed the protection that their service by rule provides. But since the federal government does not grant CB licenses to specific individuals, local governments have

seized upon this to justify legislation which restricts CB operation in many municipalities. IMHO, there should be no difference between a legally operating and clean ham station and an equivalently operating CB station WRT interference protection. But the local municipalities are much less likely to bring action against a federally licensed ham, than an unlicensed CBer. Many legal CB'ers may have to fold their operations rather than having to pay a large amount of money to defend against such a case.

I went with a group of scouts to a ski resort (didn't ski, but my son did). They had this marvellous plan to communicate with cell phones instead of moving around the resort together as a group. Guess what? No coverage. Nobody knew where anyone else was for 80-90% of the time.

I was the only ham there, so I'm not suggesting that ham radio would have been a solution. However, if there had been some sort of HTs (FRS or the like) that would have worked where cell phones failed altogether. One family did bring a pair of FRS radios and were able to stay in touch. And yes, there are other solutions to coordinating groups of people that don't rely on radio atall, but once you actually rely on radios they better work.

My point? Even in the absence of a disaster cell phones are not the answer. In an actual disaster situation relying on cellular is foolish. Yes, it may work. Or not ...

> and seven year loans.

Apples and oranges. The imporatan factoid is whether the prices have
lagged or led inflation and real income. If the Squire was $2,600 in
1961 and a good middle-class income was $5K/yr, then today the Odyssey
and a $50K income are sorta comparable. I say "sorta" because the
percentage of income you actually get to take home today is less.

OTOH, if you can keep a car 10 years today, compared to, say, 4 years
back then, that has to be factored in. How long before that Squire was
worth, say, 25% of its sticker price, compared to an Odyssey today?

(btw, it's a 2001 Odyssey. One guess what it's called....)

>What made you think he did?

Mr. Foreign Serviceman thinks that every PUBLIC posting I make is
aimed straight at him and his ego wounds are grievous.

The gunnery nurse thinks every PUBLIC posting I make is aimed
straight at him and he is mad as heck and can't take it any more.

But, over 600 comments have been filed on NOI 03-104 since the
04-29 NPRM was released...over 600 comments that will have no
effect on FCC decision-making on NPRM 04-29.

As of the close of FCC business on 15 March 2004, the number
of comments on 04-29 and 04-37 are the SAME number as on
the close of business on 11 March 2004. No one seems to be
filing anything. Not even FISTS...but then "CW gets through when
nothing else will" according to them and they aren't worried about
Access BPL.

Everyone else seems happy and content with personal in-fighting
in newsgroups instead of going out and DOING anything about
BPL. That shows everyone how "dedicated" they are to preserving
their hobby lifestyles. Dedication = nothing. Imagination and
fantasy = everything.

Brian, the murine corpse are preparing even as you write. Hundreds
of Heroic Mighty Men in cammies and greasepaint are putting on
their chutes and 80-pound GP bags, hooking up in the C5 jump door
waiting for the HALO drop signal from Fearless Leider, the
gunnery nurse. The Amateur Expeditionary FORCE at the ready!

Death to professionals! Death to CB! Death to No-Coders! Phrases
are mouthed silently as the murine corpse AEF read their phrase
cards, fingers moving slowly under the printing as they chant
mentally, anxious to drop and KILL all that disagree with Their
Beliefs!

All is not well in the C5. Dozens of pink flamingos are pooping on
cans of lavendar paint, that stuff clogging the control lines of the C5.
The C5 drifts off course, heading for the Amana Colonies. No
matter, the PA system on the C5 blares out the recorded Hymn,
"From the halls of down-town Tennessee to the shores of Mary
Land, we will fight our imaginary battle foes..."

Tune in tomorrow for another chapter in the gunnery nurse's
fevered imagination as he seethes righteously in front of his
screen, murderous thoughts causing his eyes to glow like red
LEDs on overvoltage.

Ho hum...all that about a hobby involving radios...

There are many methods of comparison. I don't know if my methods are
apples and oranges. A person has a reasonable expectation of getting
ahead by comparison to how they were doing X number of years ago. but
how on earth would that be factored in.

We have to have some sort of comparison, and I really doubt you can
factor in all the differences between the years. Does this mean no
comparisons are possible?

> OTOH, if you can keep a car 10 years today, compared to, say, 4 years

Yeah, and leases confuse the issue even more.....

Yes, you down payment was probably around half the price of the car,
whether through trade/cash or combination of both.

A Vitara. Been a wonderful little twerp so far. Gets good gas mileage,
especially compared to what I had before. $16k, and has all the
amenities the last vehicle did plus a CD player. The other choices in
this type vehicle were from $23-30K. I got the chance to try it out in
the snow today, and it's a real mudder, just like I hoped.

As I read it, the apparent answer is to turn ourselves into a third-world country. That sucks! I can hardly wait to hear who the coming inflation is blamed on!

You're right in one way, Mike. Mr. FS wants to Put Me Down.
It's his way of asserting control over this automotive chat room.
He's tried all sorts of ways to put me down and hasn't yet
succeeded. It must be terribly frustrating that he doesn't Get
His Way.

So, how's your CW rate coming along? Are you ready for the
next emergency where you have to communicate by morse
outside of a disaster area?

Or are you going to use BPL...Beeping Pejorative Language?

>European fuel prices are that high in large part because of very high taxes.
>The tax revenues are used for the roads and also to subsidize bus, transit
>(Metro) and rail service. Unlike the USA, public transportation in Europe is
>not expected to make money or even to meet its own expenses.

Jim:

Don't look now, but ALL public transit in the United States exists mainly due to state and federal subsidies which provide virtually all of the funding needed
for the procurement of vehicles, facilities, communications systems, and most of the operating costs. If public transit had to "pay it's own way," I, for one
public transit employee, would not have a job. I drive Paratransit in Kent County, Delaware, and the cash I turn in from my fare box at the end of the day would not pay for an hour's worth of my wages. At best, a few of our more heavily utilized fixed-routes in Wilmington might just possibly pay for the fuel consumed and other routine expenses, but wouldn't even come close to covering all of the essential overhead.

>>Thats why Volkswagen, BMW, Mercedes and all the other non-US Car
>>manufacturers sell their "premium edition" multi cylinder high consumption
>>vehicles to the States. They never could sell lots of them over here.
>>
>>Modern Diesel engines have a mileage per gallon of 60 or 70.
>
>Only in small cars.

True, and that's part of the reason why diesel engines are not more common in U.S. passenger vehicles. Partly by necessity but mainly by preference, us Americans prefer to drive massive, heavy, inherently inefficient vehicles such as all those 4-wheel drive SUV's being driven exclusively on perfectly clear dry roads and highways. If only we were a lot smarter in our choices of vehicles, we could probably benefit from the many advantages of diesel engines, which can now be made as "clean" as gasoline engines.

>>And their
>>performance is not less the gas engines.
>
>Agreed. But the first-cost is greater. And at US fuel prices, the difference
>may not be worth it.

It would be if we started viewing our vehicles as the mere transportation appliances they should be, and not as outward extensions of our personalities or demonstrations of our wealth.

>Suppose the diesel car gets 60 MPG and the equivalent gasoline car gets 40
>MPG.
>And suppose the car is driven 12,000 miles per year. That's 300 gallons of
>gasoline vs. 200 gallons of diesel. If both fuels cost about the same (as
>they
>usually do in the USA), the saving is only $150-200 per year. Compared to the
>price of the car, insurance, repairs, maintenance, etc, that's not much
>saving.

Now consider a driver who must drive anywhere from 25 to 30,000 miles a year, for business purposes or just a particularly long commute from a rural area to the city where he/she works. Now the fuel cost savings of a diesel start to look very attractive indeed!

>>So, now you can rest back at your next refueling stop, let the gas go into
>>your tank, and when at the cashier, just SMILE.
>>You know, you are filling up CHEAP.
>
>Back in 1980 I bought a VW Rabbit Diesel. Over its 17 year lifetime, I got 43
>mpg combined (I kept very accurate records). An equivalent gasoline Rabbit
>would have probably done about 30 mpg.
>
>But the diesel engine cost $900 more back then. Considering all factors, I
>didn't save very much driving an oil burner.

If a high mileage diesel-engine version of the Ford Focus, Honda Civic, Toyota Corolla (my automobile!) and every other econo-box in the same class as the VW Rabbit were available, then the additional cost wouldn't be so great as to skim the potential savings off from the top. Modern diesel engines are clean, efficient, and have more than adequate power for vehicles that would adequately serve over 80% of the American travelling public. They are no more difficult to maintain than a gasoline engine of equivalent power, and generally last longer because they are, out of necessity, built stronger. There's gotta be some reason why we aren't using more diesel power here in the U.S., but I am at a loss to explain it.

In your example, the FCC isn't the one making the preemptive argument...
the defendent is. The FCC doesn't get the chane to drop anything.

Official NCVEC Press Release:

VECs PROPOSE NEW ENTRY LEVEL COMMUNICATOR HAM LICENSE

The National Conference of VECs filed a Petition for Rulemaking on
March 1, 2004 proposing their version of a new entry-level Amateur Service
license and redistribution of some HF frequencies to General and Amateur
Extra Class licensees.

The petition, which is somewhat similar to the one filed by the
American Radio League, requires no required demonstrated Morse code
proficiency for any license class ...including Extra.

The NCVEC proposed the same HF/VHF/UHF bands for the entry level
class as the ARRL and both petitions grant more privileges to all classes.
The VEC's proposal, however, allows wider voice subbands and less exclusive
CW/digital frequencies. The NCVEC petition also places more emphasis on the
use of 15 and 10 meters for entry-level voice operation than does the ARRL.

The VECs proposed an additional 50 kHz of 80-meter voice spectrum
over the ARRL proposal and 25 kHz more 40 meter voice spectrum for both the
General and Extra Class. At 15 Meters, the General Class would get an
additional 75 kHz of voice spectrum over ARRL proposal; Extra Class, an
additional 50 kHz.

The frequency privileges proposed for the new entry level class
which the VECs want called the "Communicator" Class are:

80 Meters:
3950-4000 kHz (voice/image), 3550-3675 kHz (digital/CW).

40 Meters:
7250-7300 kHz (voice/image), 7050-7150 kHz (Digital/CW).

15 Meters:
21350-21450 kHz voice/image), 21050-21150 kHz (Digital/CW).

10 meters:
28.300-28.500 and 29000-29700 kHz (voice/image), 28050-28150 kHz
(CW/Digital).

All bands 6 Meters through 70 cm:
Full Amateur privileges.

The NCVEC envisions that all Novice Class operators would
automatically become Communicator Class licensees as of the effective date.
At the same time, Technician and Tech Plus amateurs would be upgraded to the
General Class ...Advanced Class licensees would become Extra Class. The

VECs believed that there was no other effective way to redistribute Novice/Tech Plus spectrum to the General and Extra Class without this automatic upgrade feature.

This means that some 350,000 Tech/Tech Plus and 85,000 Advanced Class would not be testing for an upgrade to the next class. This amounts to about 60 percent or all current licensees and those in the two year grace period. On the other hand, the VECs anticipate a greatly expanded demand for entry-level ("Communicator") testing and license preparation material. Some 40,000 Novices would be automatically upgraded to the new entry level which would not only contain their existing frequency bands, but additional HF/VHF/UHF bands as well.

The NCVEC proposes that existing Novice, Technician, Tech Plus and Advanced Class operators be issued a new Communicator, General or Extra Class license document upon their next renewal. The new privileges will "kick in," of course, as of the effective date. The Novice, Technician, Tech Plus and Advanced Class licenses will be permanently retired.

The VECs suggested that Communicator Class call signs might come from the authorized but unallocated NA1AAA through NZ0ZZZ call sign block.

Proposed entry level transmitter power is proposed to be 100 watts when the operation takes place below 24 MHz; 50 watts above. This is the same as the ARRL proposal. In addition, the NCVEC proposed mandatory low voltage to the final transmitter amplifier stage and that only commercially manufactured transmitters be used by Communicator Class licensees. Communicator Class licensees may not install repeater or remote base stations, be a volunteer examiner or establish a club station.

Communicator Class licensees must pass a simple 20 question multiple-choice written exam and will be required to obtain, read and certify their understanding of the Part 97 rules. The VECs Question Pool Committee feels that it is impossible to cover the FCC rules in what would be a relatively few questions. The ARRL proposed 25 examination questions.

This petition was reviewed prior to submission by all 14 of the VEC's around the country, and was approved by a 2 to 1 margin. While some areas of disagreement were to be expected, the fact that such an overwhelming majority of the VEC's approved the NCVEC petition speaks well for it's being representative of the true feelings and opinions of those most in tune with the examination process and the needs of the Amateur Radio community.

This is further supported by the fact that the NCVEC and ARRL petitions are similar in basic concept, and in fact agree on most issues. Taken together, these two filings appear to be speaking in a unified voice as to the needs of the future of Amateur Radio in the United States"

The FCC acknowledged receipt of the Petition for Rulemaking on March 4, 2004. It is not known when it will be distributed for initial Public Comment. The ARRL Petition has not been assigned an RM (rulemaking) file number yet either.

Of course it has. Not by judicial decision, but by the FCC's avoidance of the same. That's how and why HR2346 was drafted.

Nor does it change the fact that both you and the FCC are ignoring the basic democratic concept of 'majority rules'.

Not in the case of SEPTA and Amtrak! While there is some support, it is nowhere near the level of support in Europe.

More importantly, the support is not long-term.

> If public transit had to "pay it's own way," I, for >one
>public transit employee, would not have a job. I drive Paratransit in Kent >County, Delaware, and the cash I turn in from my fare box at the end of the >day would not pay for an hour's worth of my wages.

That's because of the location and route. Try a major metro area like Philly at rush hour.

>At best, a few of our
>more heavily utilized fixed-routes in Wilmington might just possibly pay for >the fuel consumed and other routine expenses, but wouldn't even come close >to covering all of the essential overhead.

The same is true of other forms of transportation. Airlines don't build airports, nor air traffic control systems, nor the weather and comm systems needed to run them.
>

>>the
>>price of the car, insurance, repairs, maintenance, etc, that's not much
>>saving.
>
>Now consider a driver who must drive anywhere from 25 to 30,000 miles a
>year, for business purposes or just a particularly long commute from a rural
>area to the city where he/she works. Now the fuel cost savings of a diesel
>start to look very attractive indeed!
>
Maybe. Let's see - at 30K miles per year, the diesel burns 500 gallons per year
and the gasoline car 750 gallons. That's a sayings of 250 gallons per year. At
$2 per gallon, it's still not much of savings compared to other costs.

More important, the person who drives that much (such as a certain absent
rrapper who commutes ~120 miles per day) often wants a bigger car for the

perceived comfort and safety. (Note the word "perceived").

>>>So, now you can rest back at your next refueling stop, let the gas go into
>>>your tank, and when at the cashier, just SMILE.
>>>You know, you are filling up CHEAP.
>>

>>43
>>mpg combined (I kept very accurate records). An equivalent gasoline Rabbit
>>would have probably done about 30 mpg.
>>
>>But the diesel engine cost $900 more back then. Considering all factors, I
>>didn't save very much driving an oil burner.
>
>If a high mileage diesel-engine version of the Ford Focus, Honda Civic,
>Toyota Corolla (my automobile!)

Toyota is the world leader in hybrid car technology. The Prius is an example.

>and every other econo-box in the same
>class as the VW Rabbit were available, then the additional cost wouldn't
>be so great as to skim the potential savings off from the top.

Not exactly. The manufacturers all use different engines. The cost differential
reflectes the added manufacturing cost of the diesel.

>Modern
>diesel engines are clean, efficient, and have more than adequate power for
>vehicles that would adequately serve over 80% of the American travelling
>public.

But you don't drive one!

>They are no more difficult to maintain than a gasoline engine of
>equivalent power, and generally last longer because they are, out of
>necessity, built stronger.

They are also less tolerant of poor maintenance, bad fuel, and sloppy driving.
They also have a bad reputation in some circles due to poorly designed engines
such as were used in some GM cars 20+ years ago.

> There's gotta be some reason why we aren't
>using more diesel power here in the U.S., but I am at a loss to explain it.

A combination of factors, but they fall into two categories: "Image" (diesels
are not perceived to be "cool" in the USA) and cost (gas is so cheap and
plentiful that most people don't worry about it much.)
>
>73 de Larry, K3LT
>2003 Toyota Corolla LE (Automatic)
>Averaging 30 MPG City, 41 MPG Highway
>
My old car got ~41 city, ~52 highway. With late-1970s technology in a car

weighing over 2200 pounds. The modern TDI VWs do even better.

Then there's the other end of the spectrum:

Uhhh...precisely my point, but if you listen to witless willie cell
phones can always out do ham radio anywhere anytime.

(quoting the NCVEC proposal)

> In addition, the NCVEC proposed mandatory low
> voltage to the final transmitter amplifier stage

What about the 110 AC line?

> and that only commercially
> manufactured transmitters be used by Communicator Class licensees.

Might as well call it "Appliance Class" and be done with it.

> Communicator Class licensees must pass a simple 20 question
> multiple-choice written exam and will be required to obtain, read and
> certify their understanding of the Part 97 rules.

This is the worst part. We must fight this like the plague. What it *really"
means is that there will be *no* rules and regs questions on the 20 question
test!

It is precisely this sort of thing that messed up cb.

> The VECs Question Pool
> Committee feels that it is impossible to cover the FCC rules in what would
> be a relatively few questions. The ARRL proposed 25 examination questions.

The old Novice I took was 20 questions, and we could homebrew. Which I did from
Day One. If a 13 year old kid with books for Elmers could safely build
transmitters in the hollowstate era, why all these additional limits today?
>
> This petition was reviewed prior to submission by all 14 of the
> VEC's around the country, and was approved by a 2 to 1 margin.

Which means a third of them disapproved. Were the individual VEs polled?

This NCVEC thing is very similar to the "Amateur Radio in the 21st Century"
paper by KL7CC. I wrote a detailed commentary on it some time back.

NCVEC's proposal makes the ARRL one look good. Which isn't saying much...

Shows you have very little experience unless maybe you are speaking of
cb operation. In my experience of over 40 years of ham radio operation I
have been involved in and had knowledge of *many* interference cases,
and the inteference problem is almost always caused not by the ham
station radiating excessive harmonic emission, poor filtering at the
transmitter, but with the falult of the device being interfered with
because of poor engineering, construction, and lack of shielding.

The trouble is, how do you convince an irate neighbor that
their household electronics suck? They keep mass producing
the same crap so it's not going to get any better in that
respect.

I just bought a 52" tv for the family room, and it's a little
bit sensitive to my shack, not real bad tho. I'm more concerned
about messing up the screen.

My 27" or less tv's aren't really sensitive with my rf. (?)

If I had a neighbor tearing up my new 52" tv, he'd have a hard
time convincing me that it was my fault. License or not.

Here is my take on Public Transit, Larry:

Is public transit a good thing, or a waste of taxpayers money? Is the
subsidy of public transit a liberal plot to undermine America's core
values, or what? (hehe, kind of melodramatic there!)

The use of public transit, even when subsidized by government, is a LOT
less than the amount of money that would be taken up by the construction
and maintenance of new highways that would be needed if everyone had to
use their own automobiles to get to work. These new roads would
eliminate valuable real estate from productivity, as well as the space
needed for parking the said automobiles. And guess where the money for
these new roads comes from? Taxes. Sometimes, ya just have to pay
something, I think.

There is a particulate emission problem for diesel engines, but I
suspect that can be solved. Probably the biggest problem in the past was
the lack of available fuel where we needed it. I don't think that is a
problem anymore, and I suspect that if fuel prices continue edging
upward, diesel may make a comeback.

Audio modulated FM doesn't rectify into audio at all unless there is an AM
component. Broadcast-quality limiters are quite good at eliminating AM from an
FM BC signal.

>that phone to its knees, if it was properly shielded.

People are funny. When I was a kid I put up my first CB antenna on the roof. Like many people I spent the first few weeks just listening to the chatter. But not more than a week after the antenna went up I had a neighbor knock on the door whining about interference. A couple years ago I put up my first lowfer antenna. It is quite tall (60 ft.), and can be easily seen by the neighbors. But this antenna was used only for receiving, not transmitting. Well whaddya know, a couple weeks after the antenna went up another neighbor comes a'knockin' at my door whining about interference. Funny thing was that I hadn't even finished building the receiver!

>>Not
>>suprisingly, this is the area where harmonics from high HF are strongest.

>
>I can run 100 watts and not interfere with neighbor "A", but I destroy
>neighbor "B"'s TV. Neighbor B has a Sony TV, which are notorious for
>RFI issues.

Sony sucks all around. I would rather not get started on -that- issue, but the chances are that the Sony is bad. They work fine when they are new. But one spike on the antenna or coax and they will pick up RFI from anything and everything. If your radio is coming through a Sony I'll bet that you are not the only source of interference. However, if they have cable, it's a good idea to check it -- you could be inadvertently coupling RF onto their line.

>>And again, in the course of my job I have met more than a couple hams who
>>sincerly thought their signal was 'clean' only to find out it wasn't.

>be.

Well, learning is part of the hobby, right? What suprises me are the number of hams who think that they are running clean because they plugged in a LP filter, or because their radio was expensive. If it were only that simple.....

>>> Hams are not so much getting "cocky" as they are becoming

>>available these days compared to years ago.
>
>They are both true. There are more devices AND they are made with less
>regard for RFI protection.

It's true that they don't build 'em like they used to. Sony is a perfect example of that. But even there, if the device is working properly there usually isn't a problem. The problems occur when the device is made faulty by some other cause, such as line surges or CATV bullets. Now -that's- where product cheapness really shows it's ugly head.

>Case in point, I have a Fisher tube-type stereo receiver/amp, which

That's surpising because JVC (RCA of Japan) is usually pretty solid stuff. Email me the model number and I'll see if there's a fix.

>>There was a time when a color television was a luxury,
>
>And hams running on 80 meters, close to the colorburst frequency of a
>TV would make the color vanish. A common problem back then.

And many hams would transmit using colorburst crystals because they were cheap and readily available. Some still do, but most realize the problem it creates.

>>yet nowdays people have TV's in almost every room.

>>standard issue in todays appliance market. But interference still occured to
>>these devices in the past just it does today.
>
>Some were more prone to RFI than others. Just changing brands could
>often cure an RFI problem.

That's because some were FM and some were AM. The AM phones will pick up harmonics just like a shortwave radio. The FM phones are mostly immune to RFI, even to harmonics that land on it's operating freqs. But even with FM, if the harmonic is strong enough it will dominate the discriminator.

>>They are no more suseptible to RFI

>than from an external TV antenna, reduces the potential for RF front
>end overload, it does little to prevent RFI which creeps in through
>the A.C. line cord. Not all RFI comes in through the tuner.

No it doesn't. Modern TV's use switching supplies, a design which filters RF quite nicely. Older TV's used linear supplies where the transformer stopped RF dead in it's tracks. The way RF gets into a TV hooked to CATV (or a long run of coax to the antenna) is through an RF ground loop. You can eliminate the RFI either by ground-isolating the power lines and running a seperate ground wire adjacent to the coax (hard), or by powering the TV through an extention cord running adjacent to the coax for as long as possible (less hard).

>>But they are -not- immune to
>>harmonics that land on their operating frequencies, which, in my experience, is

>watts, a -50 dbc harmonic is 1 mW of radiated power. Not much in the
>grand scheme of things, and certainly no match for the grade A
>coverage footprint of a 50 KW TV station.

The emission limitations for broadcast stations are not based on decibels below the fundamental, but on absolute limits that are very, very low. And if you check the current FCC regs you will see that similar (and also very low) limits have been imposed for any new manufactured ham transmitters and amps. This was done in response to the FCC recognizing that receivers are more sensitive than ever before, and even harmonics of very low power can cause interference to the intended function of these receivers.

>>(I should point out that -most- radio and TV interference is not caused by radio

>more consideration than someone looking to further his electronics
>knowledge through the art of radio.

There is a difference here. The ham is transmitting a signal into someone else's
private space. The other person is doing nothing to interfere with the ham. It
should be up to the ham to use his radio in a way that doesn't cause problems
for anyone else. Point the antenna in a different direction. Use a different
antenna. Make an agreement with the other person to only transmit at certain
times (more commonly called 'sharing'). There is no reason a ham can't stop his
interference, or at least limit it to an acceptable level.

From a different perspective, and assuming you can prove that your signal is
clean, have you ever thought of suggesting to the person that they return the
merchandise as defective?

>must be his fault.

Because it is. You are intruding into their homes. You take from them some of
the comforts of everyday life that any reasonable person would expect to enjoy
in the privacy of their own home. It's a nuisance like any other nuisance,
except that it's a nuisance which is protected by a federal law.

>>>The problem is with the cheap Chinese produced electronic devices.
>>>Something needs to be done to minimize their susceptibility to RFI.
>>
>>
>>Honestly, I don't believe that at all. I have yet to find one of these devices

How does that apply to amateur RADIO policy?

Try the automotive newsgroups on the first floor. They are chock
full of mileage gas brags.

Thank you, Dan.

Checking the FCC website ECFS for 16 March 2004 after the close of business there (about 8:10 PM EST), there were NO additional comments filed on 04-29 since 10 March 2004. There were only 2 comments on 04-37 by Lionel Booth, PE, N3LB, MARS AR6IP, and good old rambling Earl Gosnell III, also a licensed radio amateur.

Booth's comment is good since he is approaching the problem in broad terms, that of the electric power lines becoming actual RF radiators. Those affect ALL wanting to use HF to low VHF. It is a literate document and worth reading the 11 pages on file.

If folks don't want to trouble themselves with engineering details or EM theory, then at least they ought to scan the Booth document and say they SUPPORT it...in public...on the ECFS. The FCC sees all those and considers them for a final R&O.

It isn't difficult to file a comment at the FCC. Anyone can do it on-line for a short comment, no fancy formatting or word processing needed. Hundreds have already done so on other subjects. The FCC has made it EASY for ordinary citizens to comment.

There's no real excuse to sit like lumps in a bog, doing nothing but on-line newsgroup combat. That won't make Access BPL go away, won't stop the BPL interference from that power line in front of the house.

Red-dog the FCC ECFS, hit both 04-29 and 04-37. If anyone goes to 04-29 and wants to comment based on Booth's comment, then mention his filing under Et Docket 04-37 for 16 March 2004.

I can understand some who hate my guts for other reasons and won't want to mention my comments on both 04-29 and 04-37. But, LIonel Booth filed under 04-37 and he IS a licensed radio amateur as well as a registered Professional Engineer. At least reference Booth's comment and SUPPORT it.

I have plenty of experience as an EE. My point was not that there are devices which are suseptible to RFI, but that the RFI can be eliminated by the ham if he really wants to do so. Most do, but some fall back on federal preemption as an excuse not to even try.

I still want to see the people (tech's specifically) that have been
harmed by RF.

> In addition, the NCVEC proposed mandatory low
> voltage to the final transmitter amplifier stage

How odd! Are the newbies going to not be allowed to use antennas like
Magloops?

These people have it SO WRONG! Presumably thay are admitting that there
are safety issues involved, which there are. Then teach the newbies
safety, don't avoid the issue, teach them Safety!!

I find that the pussyfooting around safety, where these proposals to
limit power are made, is verging on criminal negligence.

> and that only commercially
> manufactured transmitters be used by Communicator Class licensees.

This is illogical! What purpose would forcing an amateur to use a commercially built product be? mThe main reason I am in Amateur radio at all is for the homebrewing and restoring of radio equipment.

I propose an addition to the proposal in which Hams of all classes must drink only Pepsi or Coke, whichever company donates more to the BPL defense fund.

The communicators should also not be allowed to own a soldering iron or electronic tools This will keep them out of their commercially built transcievers, and keep them safe from booboo's that they might get from foolishly messing with electronics, where they might get shocked or something

> Communicator Class licensees may not install repeater or remote base

> certify their understanding of the Part 97 rules. The VECs Question Pool
> Committee feels that it is impossible to cover the FCC rules in what would
> be a relatively few questions. The ARRL proposed 25 examination questions.

Cannot a person of even limited intelligence take a test of more than 25 questions? I took bigger tests in grade school.

What this is doing is alarmingly like the citizens band radio I bought in I think the late 70's or early 80's. At this point, the F.C.C. was still lamely trying to have some kind of callsign and "rules". I "had" to read a little pamphlet, and assign myself a callsign by some strange method that I forget at the moment. Even had places for me to sign.

If a person can certifiy that they have read and understand part 97, there is no reason at all that they shouldn't just say they read a book about the whole process and sign for that.

So if my town passes some nutty no interference law and the locals
then apply that law to a local ham and he then challenges the law
because he says federal law pre-empts it, then the FCC automatically
gets into the case? If you believe that, I have a bridge in Brooklyn
to sell you.

The authority hasn't diminished because of HR2346. All that
did was extend ability to take action against illegal
CB activity to local police (if and only if local
jurisdictions empowered their police to do so).

Citizen Band was created when they started issueing licenses without a CW requirement.

Good glub OM, where did you get your technical facts?
110 VAC was the standard line voltage in 1927!
Today the standard is 125 VAC. Update your notes.

> > and that only commercially
> > manufactured transmitters be used by Communicator Class licensees.
>
> Might as well call it "Appliance Class" and be done with it.

Sour grapes. Poo-Poohs. Cry me a river.
Same shi+ different day. Blah Blah Blah.
You old ham farts think everyone should know
code just because YOU had to learn it 40+
Years ago in a smoke filled room. OyVey
Bitch-Piss-and-Moan.....(playing my violin)

How do you know that? You don't even know
what the present day standard Line Voltage is!

> The old Novice I took was 20 questions, and we could homebrew. Which I
did from
> Day One. If a 13 year old kid with books for Elmers could safely build
> transmitters in the hollowstate era, why all these additional limits
today?

That was THEN - this is NOW.

I got my licence in 1969 btw and my first xmitter was
a DX-60B (which I built from a kit) and a Drake 2B.
Would I burden today's hams to do the same? No way.
It's a different era.

As someone said at a Bond Traders Luncheon I was
at 2 Months ago: "Glue-ing feathers to your ass
DOES NOT make you a rooster in the hen house".

> NCVEC's proposal makes the ARRL one look good. Which isn't saying much...

I'll give you that one. The ARRL is trying to backpeddle
big time as the hobby is dying on the vine with ever month
of the full-page listings of SK's. They should have been doing
this kind of restructuring 20 Years ago!! It's probably too
late now. EXAMPLE: Plunk a teenager in front of a new Yaesu HF station
and a 2 gHz Pentium w/DSL, DVD, CD burner and a Kazaa
account and *try to guess* which one he'll want to play with.....(grin)

From someone who entered via no-code and advanced to extra within a year
I take issue with that.

Perhaps the no-code license was the best thing that happened to amateur
radio. It removed an obstacle I wasn't ready to face at the time but
after a couple months I got my 5WPM code. And then a couple months later
my 13WPM and then the 20WMP.

What ticks me off is the watered down code requirement that we have now.
But in essence, we're all appliance operators now anyhow. It doesn't
really matter. And I think the days of amateur radio are numbered what
with BPL and such.

Oh, and I forgot to mention -- diesel engines don't have any ignition system, therefore, no ignition system noise. This makes it much easier to operate mobile HF from an automobile with a diesel engine!

>safety, don't avoid the issue, teach them Safety!!
>
There's a logical inconsistency in this requirement. The purpose of safety
questions in the written test is not so much to protect an amateur from the
consequences of his/her own ignorance as to protect *others*.

> I find that the pussyfooting around safety, where these proposals to
>limit power are made, is verging on criminal negligence.

Consider this: In most areas that I know of, a homeowner can work on his/her
electrical wiring without a license or test of any kind. Same for plumbing.
Just can't do it to somebody else's house as a "professional" - meaning for
money.

So a Communicator could legally wire or re-wire his/her entire house, but could
not legally *operate* a TS-520. Or even a solid-state rig with 48 volt
finals....because he/she might hurt themselves!
>
>> and that only commercially
>> manufactured transmitters be used by Communicator Class licensees.
>
> This is illogical! What purpose would forcing an amateur to use a
>commercially built product be?

1) To sell more commercially built products (read the "21st Century" paper - it
talks about how we need more hams or the ham equipment manufacturers will close
up shop).

2) To get new hams in the habit of buying, not building

3) To eliminate even more theory from the written test

>The main reason I am in Amateur radio at
>all is for the homebrewing and restoring of radio equipment.

>
More to the point: How many hams do we lose each year to electrocution from
their transmitters? How many hams cause serious interference problems with
their home-brew or restored rigs?

> I propose an addition to the proposal in which Hams of all classes must

>drink only Pepsi or Coke, whichever company donates more to the BPL

>
> Cannot a person of even limited intelligence take a test of more than
>25 questions? I took bigger tests in grade school.

Me too. You should see the tests they give second-graders here.

The old Novice test was originally 20 questions, then 25, then 30. Most of the
added questions were concerned with safety and the expanded privileges. Novices
are allowed to homebrew anything they can legally use on the air.
>
> What this is doing is alarmingly like the citizens band radio I bought

>
> If a person can certifiy that they have read and understand part 97,
>there is no reason at all that they shouldn't just say they read a book
>about the whole process and sign for that.
>
BINGO!

Check this out:

From the 1976 ARRL License Manual:

NOVICE (1976)

Study Question #31:
Draw a schematic diagram of a circuit having the following components:
(a) battery with internal resistance, (b) resistive load, (c) voltmeter,
(d) ammeter.

Study Question #32:
From the values indicated by the meters in the above circuit, how can
the value of the resistive load be determined? How can the power consumed
by the load be determined?

Study Question #33:
In the above circuit, what must the value of the resistive load be in
order for the maximum power to be delivered from the battery?

Study Question #34:
Draw the schematic diagram of an RF power amplifier circuit having the
following components: (a) triode vacuum tube, (b) pi-network output tank, (c)
high voltage source, (d) plate-current meter, (e) plate-voltage meter, (f)
rf chokes, (g) bypass capacitors, coupling capacitor.

Study Question #35:
What is the proper tune-up procedure for the above circuit?

The actual exam was multiple choice, and would show a schematic of the
amplifier circuit - close, but not exactly like the one shown inthe license
manual - and had 5 of the components labelled "a" thru "e". The question would
be something like, "which is the coupling capacitor?" "which is an rf chokes?"
"what is function of the capacitor labelled ''d' in the circuit above?"

That was for a Novice!

It makes sense in light of the present rf hazard calcs that we have to perform.

But I've not seen anyone claimed to have been harmed by rf.

I think I've got your statements figured out.

Cell phones or cell phone systems may break down and leave you w/o communications.

Amateur radio may break down and leave you without communications.

That's generally true, Larry.

But many modern diesel engines use electronically-controlled fuel injectors. The control circuits to these injectors can be a source of electrical noise. But said noise can be fixed.

Another advantage we didn't mention was that diesel cars generally have higher-capacity electrical systems, mostly because of the starting requirements. My Rabbit's diesel engine was rated at 48 hp - and had a 2 hp starter, 63 AH Series 24 battery and 55 amp alternator. I could jump-start almost anything with a 12 volt electrical system.

No. If the town loses based on federal preemption, they may have standing to appeal on the grounds that the federal preemption law is unconstitutional (or on some other grounds), at which time the agency responsible for the law being challenged (the FCC) would be enjoined.

>> The Patriot Act is an example of law that is unconstitutional but has yet
>to be

>
>That is only your opinion and clearly not shared by congress,
>the executive branch, nor any judiciary at this time.

It seems to be the popular opinion of congress despite the fact that they initially held a different opinion. Didn't you listen to the to the last State-of-the-Union speech? And how can anyone with standing challenge the constitutionality of the Act when it is under those laws that anyone, even a natural-born US citizen, can be locked up for months or even years on only the -suspicion- of terrorism, without a trial, without being charged with a crime, without access to legal representation, without visitors, without due process of law..... without any of the rights guaranteed by the Constitution? That's what the Patriot Act allows the government to do. Do -you- think those laws are constitutional? If you do, then think about this: Under the Patriot Act, the same thing can happen to you. All that needs to happen is for someone to claim that you threatened someone with a weapon, and if the powers that be don't like your choice of breakfast cereal, you too can become a political prisoner in the great United States of America. That's all it takes under the Patriot Act. And if you didn't know that about the Patriot Act then you really need to spend a little more time catching up on current events.

>> >And that authority has never diminsihed...has it?

>jurisdictions empowered their police to do so).

Before HR2346 the FCC was either unwilling or unable to effectively enforce the Citizen's Band. Cause or effect, take your pick because in either case their authority suffered until they conceded a portion of their jurisdiction to local authority. Since nothing has improved at the FCC since that time, it's very likely that they will concede more of their jurisdiction in the future.

>> >And I have yet to read about any actual case that has

>> >name calling.
>>
>> Nor does it change the fact that both you
>> and the FCC are ignoring the basic
>> democratic concept of 'majority rules'.
>
>How you come to that conclusion is beyond
>comprehension.

In case you missed it (or just ignoring it), I said that "this country is governed by the majority of the people, not a few holier-than-thou hams," which is true. But instead of addressing the issue you decided to whine about name calling. To wit: "Again, your derogatory name calling pretty much sums up who the real smart ass is." I have refrained from "name calling", yet you are still avoiding the issue that the majority rules under a democracy, and that hams are not the majority -- not even close. Do you have an opinion about that, or would you rather go back to whining about name calling?

WHO would enjoin the FCC. If the town loses, just who would then
enjoin the FCC on appeal to. Typically, the town wins on the
local level (i.e. the local court/magistrate or whatever. The appeal is
then on a state appeals court basis by the defendent. IF, the
state appeals court then reverses...or perhaps it even goes to the
state supreme court where it is appealed, I still see no one directly
engaging the FCC in the court process.

People threaten others all the time and no one is being locked up
as you suggest. Now if someone threatens ala the terrorits in Spain,
then I have no sympathy for them. For all the hew and cry of
the liberals against the Patriot act they can't cite one example
of abuse to any US citizen.

> That's all it takes under the Patriot Act. And

very
> likely that they will concede more of their jurisdiction in the future.

Your opinion only. The HR2346, does not give cart blanche
power to local government to simply shut down legally operated
CB stations. HR2346 allows local governments to empower their
local police to enforce existing FCC rules and regs regarding
CB. It does NOT allow local government to create more
intrusive or more restrictive CB rules. For example, a town can
not simply outlaw all CB activity, a town can not ban CB
antennas, etc.

> >> >And I have yet to read about any actual case that has

>
> So did abortion before Roe vs. Wade.

But in the area of law we are discussing, YET has still
prevailed. The truth is, most local law enforcement don't
care or want to be bothered with things like radio
interference, etc. There's no glory in it and winning
in court requires significant technological proof.

are
> still avoiding the issue that the majority rules under a democracy, and
that
> hams are not the majority -- not even close. Do you have an opinion about
that,
> or would you rather go back to whining about name calling?

Actually, majority doesn't always rule. For example, a town
can not outlaw antennas for CB, Ham, or anything else just
because a majority of people might want that. A town can't
impose a set of "approved" colors for which I would
only be allowed to paint my house (small exception in that arena
for special historic districks). A town can not prohibit me
from parking my legally registered car/truck in my driveway.
A town can't outlaw operation of CB, Ham or any other
federally permitted radio service.

Cheers,
Bill K2UNK

>Jim also pointed out that changing the direction of the antenna can help.
>Harmonics don't come off a beam as if it were isotropic.

Likely, if changing a beam heading helps, it's probably reducing the
near field strength of the interfering signal, below the point of
susceptibility. The same can hold true for any harmonic content as
well.

>>On the other hand, I used to live about a mile and a half away from

>of the broadcasted signal from the station, but I haven't seen any evidence to
>support that conclusion, either.

I guess conditions vary. I've talked to people who have claimed that
they could hear our nearby broadcast station through appliances that
shouldn't be able to receive radio signals. Granted, this is only
anecdotal evidence, as I didn't witness it personally. But I would
wonder why these people would need to lie about something like that.

>>>showing them their spurs on the spectrum analyzer.
>>
>>I have my own analyzer and my station IS clean. Now what?
>
>
>Are your neighbors picking up your signal?

Now, no (at least I don't think so, as I don't have much time to "do
radio" these days. However, back in my "radioactive" days in the old
neighborhood, I heard many second and third party accounts of hearing
my station through phones, cheap clock radios, and equally cheap
stereos. TV's I didn't bother, as a rule, except for a few notable
exceptions, where I didn't herringbone the picture (as the classic
case of harmonic interference would manifest itself), but instead my
audio would blast through the speaker (Which should never occur as the
TV's audio receiver is FM, and I was using AM), which smacked of
rectification in the audio stage of the TV.

>
>Finding the source of RFI is just like troubleshooting any other piece of
>electronic equipment. Take your spectrum analyzer to where the interference is
>occuring -- it doesn't do any good to measure signal strength where it doesn't
>matter.

Ah, but it does matter! I was verifying that the signal I was putting
into the air with my equipment was clean, and I did that.

You touched on some interesting external causes of RFI. There have
been cases where strong near field signals have been rectified by
corroded connections (like metal gutters or siding), and the signal
reradiated as a form of intermodulation, which can have the same
effect as harmonic generation. In this case, the transmitter is clean,
but the effects of the surrounding area can mimic a dirty transmitter.

I've even seen a case where a poor joint in a ham's antenna, caused a spur to be generated. This is especially troublesome in repeater operation, where these IMD products can desense the repeater's receiver.

But unless these culprits are on your own property, you have no control over them. If I find that "harmonics" were being generated as a result of rectification in my next door neighbor's siding (a different neighbor from the one complaining from RFI), what can I do? I'm not about to pay to re-side his house, and he's under no obligation to do it himself.

> Also, what are the devices that are receiving the interference? If you
>bring those same devices into your home (assuming you don't have interference
>with your own stuff, as per Bill's example), does it still pick up RFI? If you
>add a device to filter the fundamental does it still receive interference? Is
>the interference entering the device from the antenna, the power line, or some
>other unknown route? Is there RF on your power feed? Does either house have
>aluminum siding? If the RFI is coming through the TV, is it interfering with the
>audio or video, or both?

Those are all intelligent questions to ask, when trying to get to the bottom of the issue. The problem is that in many cases, you won't have access to the problem devices, as the neighbor may not be receptive to "that radio asshole" tampering with his stuff. Also, I am not comfortable with adding any devices to people's equipment, as in their eyes, any future problems that they may have with their equipment, will automatically be the fault of the work that you did. It doesn't matter that you and I know that this is a ridiculous conclusion. But remember, we're dealing with non-technical people here, and that is the least of the wild theories that they come up with. I had a radio associate about 20 years ago, who had a neighbor who bought a new TV (it was a Sony), who then started getting TVI. Then this neighbor also started having reception problems, and blamed it on the radio op's large beam antenna (even when the radio op was not transmitting). Never mind the fact that this neighbor's other TVs worked alright. But the neighbor insisted that beam antenna was blocking signals only to his new Sony TV. It didn't help that a local TV repairman could not find anything obviously wrong, and concurred that it was "likely" that the radio op had something to do with the problem. We joked about it, and nicknamed the radio op's beam the "Sony Signal Sucker" (Or S.O.S. for short). But this situation illustrates the lunacy of dealing with the non-technical mind.

>
>Some of these might sound like silly questions, but putting a bunch of silly
>answers together can draw a very different picture.

Those are hardly silly questions! They get right to the core of the issue. But sometimes solving them is the real challenge.

>And it's very possible that
>the device or devices in question simply need repair. But since I don't have the
>whole picture I can't say one way or the other.

If would call the installation of devices to limit exposure to near
field RF, a "repair". One that should 've been made at the factory.
But those $.50 worth of parts add up when factored against millions
of consumer devices, and has an impact on profit. Considering that RFI
situation are not likely for most consumers, the manufacturers took
the risk of cutting corners in the name of increased profit.

>>> And these are hams who swear
>>>up and down that their signal is clean and that the problem is with the
>>>neighbors equipment.
>>
>>It usually is, trust me.
>
>
>You are right, it usually is. But a few aren't. Those are the one's I was
>talking about.

There are a few bad apples in every bunch. That's why we have so many
entitlement programs. Some people just don't get the concept of
personal responsibility.

>I thought I said this before, but I'll say it again: I don't think that all
>hams, or even most hams, run dirty stations. I believe most of them -do- run
>clean. The problem, as I stated before, is a few hams that don't have a clue and
>are going to ruin it for the good ones.

That's true in many facets of life. That's why I am attempting to
throw some cold water on the assumption that the problem is bigger
than it really is, and that the fault lies with the radio op in the
majority of the cases.

> But then again, I'm not a ham and I'm
>not about to defend any of them, good or bad. I see things from a bit different
>perspective because of my job, and until you have done the same job for a few
>years I don't expect you to see it the same way.

Granted.

> But I -would- expect you to
>consider what I have to say because it is what I have seen first-hand. And what
>I have seen is that unintentional rectification is a far less common source of
>interference than poorly filtered transmitters. You may have seen different, and
>that's fine. Our tower cranks out several thousand watts 24/7, and one would
>think that with that kind of power unintentional rectification would be a major
>problem. It isn't, at least not here. Maybe it's a geographical thing....

I can't explain it either. But I've been a party either directly or as
a "consultant" to other people, who have had RFI issues. From
proximity lights, to burglar alarms, to smoke detectors, computer
speakers, and all sorts of other electronic devices, many of which do

not contain a receiver in them at all. How can a device with no
receiver, discriminate between a dirty transmitter and a clean one? Is
it more likely that a device like an amplified computer speaker, is
responding to a -20dbc (I would consider that "dirty") harmonic, or
the full strength fundamental?

>>>The rest get a
>>>complaint filed with the FCC by the station because they are interfering with
>>>the station's transmission.
>>>
>>>My point is that interference is almost always caused by excessive harmonic
>>>emissions; i.e, poor filtering at the transmitter, not at the receiver (or
>>>device receiving the interference) as most hams claim is the case.
>>
>>I've been doing radio for over 30 years now and I've seen exactly the
>>opposite. Most of the cases (and the FCC database backs this up) of
>>RFI are the fault of the receiving equipment. When you run a squeaky
>>clean 4 watt CB, and 100 watt H.F. ham gear and you still have
>>interference complaints, with all filtering, grounding, and proper
>>antenna decoupling in place, it's usually not the ham's fault. If
>>you're going to fight the fight, it's helpful to have all of your
>>facts straight before you do.
>
>
>The FCC 'investigators' rarely visit the scene to determine the cause of
>interference. If you read those cases in the FCC database they simply reflect
>what is claimed by one party or the other, but usually by the ham.

The FCC had investigated a number of cases. They also rely on
competent independent engineers to do so as well. It didn't take them
long to realize that the majority of cases were the fault of
inadequately shielded C.E. devices. They also have a fact sheet which
addresses what to do if you receive interference on a telephone, since
a telephone has no receiver, and therefore has no reason to have any
RF on it. Other devices fall under the same parameters.

Some may try to make the case that the FCC dropped the ball, and
should have done a more thorough job. But my own experiences back up
what the FCC has concluded.

> Check the
>records for interference claims regarding commercial stations and you will see a
>very different picture.

I would offer that commercial stations have a financial and public
relations agenda, which would be more than sufficient motive for
limiting their exposure as an RF "bad guy". If they can "explain" away
RFI problems as IMD products from another transmitter (A "sloppy" ham
for instance), they can deflect their responsibility in the matter.

I have an Icom 706 HF transceiver. I can hear a strong local AM
broadcast station on its fundamental frequency, the second harmonic,

and the third harmonic, which falls right below the 80 meter band. If
I turn off the radio's preamp, the harmonic goes away. I also have a
Yaesu FT-757, on which I do not hear the same interference. Now, based
on my own investigation, I would conclude that the Icom's receiver
preamp is being overloaded by the fundamental signal from the radio
station, and is creating IMD products or some other spurs. Is this the
fault of the radio station? What makes my situation any different from
a consumer device problem other than I am technically able to diagnose
the real problem on my own? Should I have complained to the radio
station? Would you not agree that my "interference" was the fault of
my own equipment?

>>>BTW, I should point out that we at the station take care of our listeners and
>>>respond to complaints of interference to our signal wherever they occur (within
>>>our contour).
>>
>>I would propose that your motives are less altruistic and more to do
>>with market impact.
>
>
>Damn straight! It's good PR, great WOM advertising, and it's well within the
>station's rights to try to resolve any source of interference to its signal.

Even if it means deflecting their part of it onto a nearby ham by
suggesting that his transmitter is "dirty"?

>Actually, the campaign started because of a couple broadcast pirates that were
>messing up the band. Go figure....

I love radio pirates. Not because they defy the law. But I enjoy the
raw, un packaged productions. Nowadays most commercial stations are
clones of hundreds of others. They've taken the creativity and local
personality out of individual markets in the name of a "proven"
corporate strategy. The result is a network of bland cookie cutter
programming, which lacks the style and depth that I remember from the
60's and the early 70's.

>>> Many times that interference is caused by radio operators, legal
>>>or not. We determine the nature of the interference then attempt to resolve it.
>>>If it is caused by a radio operator that is unwilling to clean up his act then
>>>the station files a complaint with the FCC.
>>
>>Unwilling or unable? It's tough to solve a problem that's not yours to
>>solve. Other than giving up your radio hobby.
>
>
>Unwilling. I haven't seen a case yet where a ham (or even a keyclown) wasn't
>able to keep his signal off the TV, radio or cordless phones if he made the
>effort.

I have. Other than offering to buy the neighbor a new TV or other
"device" that's more RF immune, once you're within your technical

spec's, there's often not much else you can do other than reducing
your power, or reducing the amount of time to spend "talking".

> Mind you that there are still some old single-conversion radios that
>seemingly scan for the most obnoxious RFI on the band, and there is nothing you
>can do about that except replace them. Fortunately, they are usually old and
>cheap.

No they're not, that's my point. There are still MANY of these "signal
seeking" widgets on the market. My JVC stereo, amplified computer
speakers, Sony TV's, the list goes on. I have ham friends who, either
for themselves or as a "favor" (to themselves actually) to their
friends and neighbors, will take their 2 meter HT with them when they
go to a place like Best Buy to look at new TV's. Waving the HT in
close proximity to each TV while it is on will reveal which ones are
somewhat immune to RFI and which ones are problems in the making.
Lines in a picture or buzzing sounds out of the speaker, are signs
that this is not the TV for you.

>And the problem -is- your's to solve if you are the source. That's not law, it's
>just decent social behavior. If we choose to live communities, we should really
>learn how to respect the others in the community instead of shoving a federal
>regulation in their face and saying "tough titties" (that may not be the way it
>is intended, but that's the way it sounds to the other guy).

I agree with this 100%. The problem is that many neighbors wait until
they've had it "up to here" with the problem before calling your
attention to it. By then they've become somewhat belligerent, and not
too receptive to you tampering with their stuff (not that I'd want to
for the earlier reasons). They will also insist that YOU, the ham, pay
for it all because, after all, the ham is "causing" the problem, even
if the symptoms are the fault of the poor C.E. device. I had another
ham friend who hung a tray full of high pass filters on his front door
with a note that basically said, "For TV interference, take one filter
and call me in the morning".

>>> We get a better response from the
>>>FCC than do a few angry neighbors because the station pays a lot of money to
>>>stay on the air, and the FCC responds to money, not people.
>>
>>
>>Exactly!

Sure. And there is no logical argument that can convince me that safety
shouldn't be practiced from the start. It doesn't have to be safety
officer level, but it has to be there, and it has to be there from the
start.

Right! we'll have to work on that! The goal is no booboo's. We have to
protect the new hams from themselves. So I would amend the proposal to
not allow Communicator's to use ANY voltages over 48 volts.

Maybe they should wear aluminum foil hats too?

I guess you meant "Len", Brain...but another typo, per the
LennieRant of "typo = rage" must mean we're getting under you skin!
Too bad!

Yeah...he does...Offers himself up as a "professional", scolds
EVERYONE for allegedly not knowing about anything not directly Part 97
related, then makes stupid, easily caught errors.

Kinda like you, Brain, without the assertion of "professional".

I was nailed by maybe 50 watts of RF one time on the tip of my finger.
I was tuning up a MFJ tuner, and there was a problem somewhere. The
metal band on the tuner apparently capacitively coupled me to the tuning
cap and shazam! Darned if RF burns don't hurt a LOT.

I think that NCVEC and ARRL and others are missing the boat here. With
the likely disappearance of Morse as a requirement, they are simply
proposing *another* caste system, in which there is an elite, and an
underclass ghetto of people with what to me seem to be radically reduced
privileges. I don't have anything against different levels, but this
seems like too much discrimination.

- Mike KB3EIA -

1119. Why the caste system? was: NCVEC files license restructuring proposal

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-17 14:44:06 UTC
From: Mike Coslo <mjc5@psu.edu>
Message-ID: <40586436.2040505@psu.edu>
Source record: 89233

Now that the element 1 requirement is likely to go away, why do NCVEC, ARRL, and even Hans' proposals simply set up a new caste system? There is nothing wrong with levels of certification, but they should make some sense.

The only logical argument that I can accept for the punitive measures of power limitations and the ridiculous restrictions on homebrewing and the "final voltage restrictions for the lowest class of operation is just the creation of another group of "great unwashed"

We DON'T learn do we?

It has some improvements over the League's plan, but that all depends on your perspective.

I'm not in favour of making the theory requirements easier. Both of these plans upgrade all the Techs to General just to add a lower class licence without increasing the number of classes. This is because they know the FCC won't accept anything that makes the end result more complicated.

I don't think we need an easier theory test to attract people. If someone is genuinely interested they will learn the theory. What we need is simply publicity. Most people are scarcely aware that ham radio even exists.

The code test does need to be dumped to get over the hurdle of potential recruits who immediately lose interest when it is mentioned. No-code licencing for VHF+ did not eliminate that problem, no matter what anyone says to the contrary. Any intelligent person knew that code testing was only postponed if they wanted HF. However, most people don't even get that far. Our visibility is zero. Besides, I am sure that the FCC will eliminate Element 1 anyway.

By all means restructure, but these petitions are misguided.

You should be. Everyone should be worried, because if they can pass laws like that, the next act of congress might include a provision that might take away basic civil rights that affect you directly.

>> That's what
>> the Patriot Act allows the government to do. Do -you- think those laws are

>> great United States of America.
>
>People threaten others all the time and no one is being locked up
>as you suggest.

Some people are indeed being locked up. But what I am suggesting is that this law is wide open for abuse by the government, and there is little chance for any victims to challenge it because those same victims are locked up tight and stripped of their right to mount any sort of legal defense.

> Now if someone threatens ala the terrorits in Spain,
>then I have no sympathy for them. For all the hew and cry of

>interference, etc. There's no glory in it and winning
>in court requires significant technological proof.

Local LE's do indeed have a stake in the elimination of RFI at the local level because the FCC doesn't do the job at the federal level. If you do a thorough search on google you will find dozens upon dozens of local ordinances that outlaw RFI despite federal preemption. Many of them exclude hams, many don't. And local LEA's are especially concerned when the FCC interferes with the prosecution of anyone that causes RFI which disrupts their local emergency and vital services (Helm v. Louisville Two-Way Radio Corp.,(Ky. 1984); Southwestern Bell Wireless, Inc. v. Johnson County Board of Commissioners,(10th Cir. 1999)). The desire was there, and so was the proof. The deciding issue was federal preemption. But hey, nothing lasts forever.

>for special historic districks). A town can not prohibit me
>from parking my legally registered car/truck in my driveway.

Have you ever heard of a 'planned community'? I think they have a new phrase to describe them these days, but the concept is the same: If you buy property in a neighborhood, as part of the sale you must agree to follow the bylaws of the neighborhood. I don't know if it's legal, but it's done.

>A town can't outlaw operation of CB, Ham or any other
>federally permitted radio service.

Who said they can? More word-twisting? I just said "majority rules in a democracy", and it does. If the majority is fed up with FCC's lack of action regarding RFI complaints, you can bet that eventually the majority will speak and be heard at the federal level. That's the way this country works (most of the time, at least).

> You sure seemed to be doing a good job of it above. Thanks for coming
> clean and acknowledging that cellular telephones have played a huge
> role in emergency response communications.

Here you go with putting words in other peoples post,
MiniLennie...

I DID NOT say they play a "huge role". They are important, but
thier loss of service is a contingency planned for. So is the loss of
the commercial and public service systems. Those plans include using
Amateur Radio as a stop-gap.

Can you/do you refute this?

> > What I HAVE stated in this and other forums is that Amateur Radio
> > CONTINUES to provide a necessary and almost irreplaceable asset.
>
> To the exclusion of all other communications means. At least until
> you posted the above.

An absolute Brian Burke mistruth.

Brain, WHY do you insist on making assertions that ANYONE who
might care to research can find out are so blatantly false?

Do you ENJOY being proven a liar?

> NO
> > OTHER RADIO SERVICE provides the flexibility and utility that Amateur
> > Radio does.
>
> You're simply wrong on that one. Amateur radio does not offer the
> flexibility and utility that cellular telephones provide.

Oh...?!?! How?

(this guy IS an idiot...Hope I get to see him at Dayton and tell
him to his face...)

When the cellsite is down, unaccessable, or overloaded, HOW do you
communicate with your cellphone?

> > I challenge you to prove THAT otherwise, also.
>
> Challenges, challenges, challenges! That's a part of your problem,
> Don Quixoterobeson. Always making challenges.

So far, Putz, you've not been up to ANY challenge. (no cajones)

> > > > These facts are not from some ARRL source...these assertions come
> > > > from a plethora of govenmental, public and private agencies who have
> > > > benefitted from the contributions of Amateur Radio and have expressed

> >
> > How well does a cellphone operate without a functioning cellsite,
> > Brain?
>
> Don, if you can say my cell site is dead, I can say your ham radio is
> dead.

When the repeater is down, I can switch to simplex...When the
propagation is bad, I can switch bands...If FM is inappropriate, I can
switch to a data mode or SSB.

So far, Brain, you've not proved anything except your
ignorance...but you've done THAT well...

> > Please DISPROVE >>ANYTHING<< I have said about Amateur Radio's
> > role.
>
> Just did.

No, you've not. You have made a foolish assertion that is NOT
supported by a shred of evidence.

> > I have NEVER said anything even CLOSE to the idea that we're the
> > only game in town. Quite the contrary.
>
> You omit any discussion that any other radio service or common carrier
> can provide emergency comms. That is a form of lying.

First of all I have not "ommited" anything. I have discussed
other services on many occassions...It happens THIS is a forum on
Amateur Radio.

> > I >>HAVE<< said we provide a service to those who make the plans
> > and need the help.
>

> Until the emergency happens, you don't know who your customer might be
> or if you can provide a service to him or her.

Ahhhh...but I do...

You see, Mr Clueless, there are things called "MOU's", or
"Memorandum of Understanding", that exist between agencies for just
these instances.

Those of us who are actually involved in these types of activities
prepare in advance for these issues. It's called "TRAINING".

Is it possible to train or prepare for ALL eventualities...?!?!
Of course not, but short of The Rapture or complete nuclear
annihilation, I'd say most responding agencies have SOME plan in
place.

ARES has MOU's with nearly every state EMA in the Union. That
pretty well puts them in a positon to be able to train with just about
everyone they will need to be in touch with during any given
emergency.

> Unless your emergencies are always predictable, in which case they are
> not emergencies.

Sure they are.

Can anyone say exactly WHEN an emergency will occur? Of course
not! But I know, with unfaltering certainty, that tornadoes will
come, rivers will flood, buildings will burn, aircraft will crash,
power grids will fail, etc etc etc.

Are YOU saying that these events, which we KNOW will occur at
some time, are NOT emergencies simply becasue we know they occur?

> outages?

You interject adjectives again, Your Cowardness. You also tried
to skate around answering MY request to cite the post wherein you
alledge I say such a thing...

Cellphones were nearly USELESS in the initial stages of the
attacks in NYC due to overload and loss of cell sites. This is
documented fact.

> > > Did you say that cell sites don't have emergency backup generators?
> >
> > Absolutely not. You'll please quote the post wherein I made such

>
> Just making a clarification. So you do say that cellular sites are
> capable of operating in an emergency?

Why are you being an idiot? Was this a birth defect, or have you
been studying...???

> Just making a clarification. Just trying to get your non-verbals on
> paper.

No clarification needed, Brain, unless you have a rectal-cranial
inversion that you need resolved (which is reasonably apparant from
your posts)

As for "non-verbals", we're still waiting for YOUR "non-verbals",
ie: from whom you got permission to operate Amateur Radio in Somalia,
and by what United Nations authorizaton that person had to GIVE you
that authority...

I can remember the names of every commanding officer or OIC I
served under in the USMC going back to my Series Commander in boot
camp in 1974. You can't pony-up a name of a guy you served in a war
zone with...?!?!

> > "Emergency comms" are NOT >>only<< when the wires are down or the
> > cell site destroyed, Brain.

>
> JJ thinks they are. My cell site is always down, his ham radio is
> always up. That is the picture he paints.

Is it?

> > disaster mitigation agency you might have a better insight as to what
> > Amateur Radio's OTHER roles are...?!?!
>
> I was a MARS volunteer and BST member. I have no problem with that
> concept. But there sure are a lot of DP planners running around with
> cellular telephones nowadays.

Yes, there are. And they still depend on Amateur Radio
organizations to fill essential billets in EOC's.

When was the last time YOU were in an EOC as a functionary,
Brain? When was the last time you participated in ANY disaster
mitigation exercise in ANY role?

> > > You and Dee simply cannot accept that an unlicensed service has played
> > > a major role in emergency comms.
> >
> > What "unlicensed service"...?!?! CB? FRS? MURS? Part 15
> > compliant devices?
>
> Sure. Why not?

OK, Brain...YOUR "scenario" was "that an unlicensed service has
played a major role in emergency comms".

Now...provide me with some example of one of those "unlicensed
services" playing a "major role".

To ME, at least, "major role" means that SOME sort of crucial
event was dependent upon one of those "services" being able to render
a meaningful, positive outcome.

So...YOU put it out there, let's see you come up with some
pertinent examples.

And remember, Brain, "major" was YOUR adjective...NOT mine.

> I'm just so happy that you finally acknowledged that mere cell phones
> play a major role in disaster communications. Or did you?

I said they played a role...just like Amateur Radio does.

Now...You made some silly assertions that I've asked you to
substantiate.

You got the cajones to come up with valid answers, or are we to
be treated to more of your lame sandlot excuses...???

> Of course...and all the NYFD and NYPD radios were all cell phones,
> right? Gosh, somehow they managed to get there anyway!

They got there based on dispatches via repeaters that were on the
Towers, neither of which immediately collapsed after being struck.

There are reams of documentation of how those repeaters failed,
Lennie, and the subsequent lack of "talk-around" (simplex to you and
me...) capabiltiy in the EMS and Fire Service HT's...or at least any
contingency planning for redirecting thier communications to simplex
and how to do it...

BTW, Lennie...Unless you're refering to "New York Floral
Delivery" you have once again erred...

The Fire Service in the City of New York is "FDNY"...Fire
Department of New York"

I guess it depends on what you're hearing it through. The 15.734 Khz
horizontal sweep rate is more like a whine. The 60 Hz vertical sweep
component is more like a buzz.

>FM BC signal.

Exactly! So any intelligible sound that passes through a TV's audio
section is being rectified in a place that it has no business being,

usually well past the limiter stages. This phenomenon is reflective of
poor design. In many of these cases, the RFI entered through the A.C.
line cord and got coupled into the audio amp stages.

Oh boy! have you hit the nail on the head there. People have other
interference problems (squirrels chewing their antenna lead), but if
they see an antenna, they conclude that their problems are the fault
of a "transmitter".

>>>Not

>check it -- you could be inadvertently coupling RF onto their line.

I find that a number of cable installation are not grounded properly
at the entry point to the home. That's supposed to be code, but some
of the contractors who do the majority of cable installs around here
are only interested in getting the most money they can in one day.
Time is money for them.

>>>And again, in the course of my job I have met more than a couple hams who

>or because their radio was expensive. If it were only that simple.....

It's never THAT simple. But it's a start. Good (and properly grounded)
low pass filters will further reduce any harmonics that weren't
properly filtered in the radio.

I love JVC products as well. I have another JVC system downstairs
(Different model) and it's fine. If I remember tonight, I'll look at
the receiver for the model number. I assume that the problem is either
A.C. line or speaker cable related. I just haven't had the motivation
to apply all of my known remedies yet.

Most of the 46/49 Mhz phones that I've seen are all FM. The last
cordless phones that I saw which might have used AM where the old
49/1.7 Mhz phones. Even some of them were full FM.

>>>They are no more suseptible to RFI

>dead in it's tracks.

Then there were the "transformerless" linear supply designs. THEY
were, by far, the worst for AC line RFI ingress. There was nothing to
stop the RF from riding along the supply rails and into an audio
stage.

> The way RF gets into a TV hooked to CATV (or a long run of

Most consumers have a problem with "extra wires" attached to their
sets.

>>You're right, you can't expect a TV to reject an on-channel harmonic.

>>coverage footprint of a 50 KW TV station.
>
>
>The emission limitations for broadcast stations are not based on decibels below
>the fundamental, but on absolute limits that are very, very low.

At 50 KW or more, you would need tighter specs. -50dbc down from 50 KW
is still .5 watts, which could be significant, and outside Part 15
specs.

>And if you
>check the current FCC regs you will see that similar (and also very low) limits
>have been imposed for any new manufactured ham transmitters and amps. This was
>done in response to the FCC recognizing that receivers are more sensitive than
>ever before, and even harmonics of very low power can cause interference to the
>intended function of these receivers.

Unless they very recently changed the rules, -60dbc is the current
harmonic spec for most transmitters used in the amateur and land
mobile services.

>>>(I should point out that -most- radio and TV interference is not caused by radio

>
>
>Is that the one with the three BF960's? Stupid design if you ask me, putting
>three MOSFET's on a single board with no shielding between stages and set for an
>overall gain of 40 dB!

I don't know as I never physically had the device in my hands. That
might be the one, as the better design used CATV gain blocks, which
were internally stabilized.

>>>But of the cases where the source was
>>>clearly a radio station, the cause was almost always harmonics.)

>
>The toroidal choke works better if you split the wires and wind them in opposite

>
>Now this is what I'm talking about. It's like the FCC says RFI is a bad thing
>unless it comes from a ham, in which case the rest of the world must suffer.

It's just a case of experience. Hams are noted for being more
technically aware of their stations operation. That may not be as true
today as it once was, but it's still a valid observation when compared
to other services which are designed to be used by non-technical
people (Like CB).

Hams also have volunteer groups within their own ranks to take care of
these things. I just got lucky that the matter dropped. Had my
neighbor made a bigger fuss, they may have pushed the issue. I figure
that my neighbor (Who himself used to be a CBer) turned me into the
FCC just to "scare" me.

>There is a difference here. The ham is transmitting a signal into someone else's
>private space.

Last time I looked RF doesn't observe borders either real or imagined.
It is impossible to prevent (Unless you want to enclose your house in
a faraday cage) RF from "polluting" your airwaves.

>The other person is doing nothing to interfere with the ham. It
>should be up to the ham to use his radio in a way that doesn't cause problems
>for anyone else.

In other words stop transmitting. Hardly fair. Especially when the
person with the interference can fix the problem by buying better

consumer devices.

> Point the antenna in a different direction. Use a different
>antenna. Make an agreement with the other person to only transmit at certain
>times (more commonly called 'sharing'). There is no reason a ham can't stop his
>interference, or at least limit it to an acceptable level.

What's considered "acceptable" is subjective. And that difference in perception is the source of most of the contention. Most people work during the day time, and enjoy their "entertainment" at night. That leaves a fairly small window for compromise where either party isn't giving up something that is important to them.

Some people are happy if you stay quiet during certain sporting events. Other people will settle for nothing short of the total elimination of any and all interference. I've had to deal with some people so paranoid that they feel that the ham might give them cancer as a result of the RF exposure. How do you fight that level of paranoia?

>From a different perspective, and assuming you can prove that your signal is
>clean, have you ever thought of suggesting to the person that they return the
>merchandise as defective?

Human nature is such that people become very defensive at the mere suggestion that their equipment is to blame. And since this is normally a design issue, any replacement that they get of the same model will likely be just as bad. Suggesting a different brand/model now begins to infringe on that person's right of individual choice. It's never a pretty sight.

>
>>>I agree with you 100%, and one of those "special interest" groups is the ARRL.

Ok, look at it this way, would you blame the weather for making your house cold, if your front door was wide open? Maybe we should just stop all cold weather? Afterall, that cold weather is "intruding" into

someone's home. Why should a homeowner take steps to block these
intrusions? They should be eliminated at the source.

That's basically the position you are taking.

>It's a nuisance like any other nuisance,
>except that it's a nuisance which is protected by a federal law.

Being told to give up an important hobby and passtime, is a "nuisance"
as well. It all depends on your perspective.

I believe that all radio operators should be responsible for making
sure that thei stations are all in compliance with FCC rules and are
built and operated within the guidance of good engineering practice.
Once this criteria is met, then any further RFI becomes the problem of
the recipient, since it can be demonstrated easily that poorly
designed consumer devices are responsible for the inability of the
device to reject interference. You wouldn't live in a house without
walls, so why should you settle for devices which lack proper
shielding?

Paying attention is one thing. Getting CB'ers on board with proper RFI
responsibility is totally another.

Exactly! Sympathetic vibrations. It's like your signal is tapping someone else's
tuning fork.

>But unless these culprits are on your own property, you have no
>control over them. If I find that "harmonics" were being generated as

No, but what you -can- do is isolate the 'tuning fork' and dampen it so it doesn't oscillate. The culprits are usually resonant lengths of audio and video cables.

>> Also, what are the devices that are receiving the interference? If you

If the neighbor is not receptive to your efforts to track down the source of the interference then it's his problem. It's just like if someone complains about termites but won't let the exterminator do his job.

That's not such a looney concept. Every antenna has a capture radius. Maybe that one had an exceptionally large "suck zone". Also, have you ever checked out Bill Beaty's site? http://www.amasci.com/

I probably mistated myself in all this quagmire: The dirty hams are few, and are only a small contribution to the problem as a whole. A larger part comes from

keyclowns, who I believe will be responsible once again for tighter restrictions on ham radio. But if there's one thing I don't like it's a cocky amateur trying to educate me, a professional, about radio and electronics. They are different fields to be sure, but many aspects are the same. So while I can't tell an RCI from a Ranger without looking at the ID tag, I -can- give a qualified opinion on other issues. I digress.....

>it more likely that a device like an amplified computer speaker, is
>responding to a -20dbc (I would consider that "dirty") harmonic, or
>the full strength fundamental?

It's the basic amplifier circuit. Any amplifier will oscillate if given enough feedback in appropriate phase. An RF signal can be enough to cause a high-gain amplifier to oscillate. It might oscillate on the frequency of the stimulating signal, or it might just sit there and 'ping' on it's own resonant freq. But one thing is common to most of these devices, and that is they are most suseptible to frequencies in the high-HF and VHF portions of the spectrum. I don't know exactly why that is, but I suspect two possibilities: the physical size of the circuit and it's wires have lengths that make efficient secondary couplings to stray RF. The other idea is that while some equipment is intentionally protected from strong AM broadcast signals, the efficiency of the filter drops off with increasing frequency. Of course those ideas are nothing more than speculation, but they are things I intend to pay attention to in the future.

.....weather balloons? ;-)

>Some may try to make the case that the FCC dropped the ball, and
>should have done a more thorough job. But my own experiences back up
>what the FCC has concluded.

I don't know when these investigations occured, but I know that sometimes they
will refer a ham to an "RFI committee" which is comprised of more hams. Either
way, the state of electronics is changing so fast that it's hard even for a
professional to keep up with the latest advances. That may be why I like vintage
CB's so much.... simplicity!

>for instance), they can deflect their responsibility in the matter.

On the contrary, most stations are perfectly willing to admit any case when
their emissions exceed specs. In fact, such instances are required to be logged
in the station's records. What broadcast stations -don't- like is being blamed
for interference that is caused by other sources, such as keyclowns and a few
dirty hams. I'm sure that good hams can appreciate this point of view since they
are always getting a bad rep because of the keyclowns.

>my own equipment?

The difference is that a person can walk into any house in the US and expect to
see a TV, a radio, CD player, computer, and wouldn't be at all suprised to see a
cordless phone, garage door opener, etc, etc. They -don't- expect to see an
ultra-sensitive ham radio. Your equipment is exceptional -- an 'exception' from
the norm. Another difference is that as a ham you -expect- and -accept- such
issues as receiver overload and RFI. Most people don't.

>
>Even if it means deflecting their part of it onto a nearby ham by
>suggesting that his transmitter is "dirty"?

That's way off base, Dave. We don't deflect anything. If a listener calls us and
tells us that something or someone is interfering with their reception of our
transmissions we will check it out. Like I said before, most of the time it's a
power line problem. If it's a radio problem we can easily pin down the source
and address the issue with the ham (or keyclown, as the case may be). We help
resolve the problem on both sides of the fence. In fact, that's how we found two
of our best employees (long story).

>>Actually, the campaign started because of a couple broadcast pirates that were

>60's and the early 70's.

I'm with you 110% there. The station I work for is one of the few remaining
independant stations in the area, and every month I wonder how long it will be
until we get swallowed up. If you think about it, radio is just going through a
transition into networking, something that television did decades ago. But you
still won't catch me working for Pinnacle or Clear Channel.

>>>> Many times that interference is caused by radio operators, legal

>spec's, there's often not much else you can do other than reducing
>your power, or reducing the amount of time to spend "talking".

If that's what it takes. I found that most neighbors are more than willing to
give a little if the ham is willing to do the same. That's how we all get along
in a society -- compromise. If they are not willing to compromise, perhaps a
third party can mediate an agreement.

>> Mind you that there are still some old single-conversion radios that

>Lines in a picture or buzzing sounds out of the speaker, are signs

>that this is not the TV for you.

Anything will overload if you feed it enough RF. But like I said before, unless I can see it for myself I really can't say one way or another. And I still think there might be a fault with your JVC because that's not very characteristic of their quality. I have a lot of JVC gear and none of it has ever caused me a problem with RFI even in a noisy environment.

>>And the problem -is- your's to solve if you are the source. That's not law, it's

>
> Are you really that confused, or are you intentionally trying to
complicate the
> issue?

Not confused at all. Let's try it agin slowly:

1. Local gov't charges me with some infraction
which I claim they have no right to because of
federal pre-emption. (Here's a good example:
a local law that prohibits the public from having
a radio in a vehicle that can receive police
broadcasts.) I have a ham transceiver which,
like most such rigs, has a very extended receive
range that can also pick up local police channels.

2. Several years ago, the FCC
issued a blanket pre-emption against
such local laws IF the violation is because the ham
has a commercial ham tranceiver that happens
to also cover local police channel(s).

3. In court (local court) I raise the federal
preemption as my defense. The local court sides
with the town and doesn't accept my defense.
I lose at the local level. (If, on the other hand,
I win, then end of case.)

4. I appeal the case to the next level, again asserting
feeral preemption as over riding and that the lower court
was in error in not accepting the defense argument.
The town files its own counter argument. At this
point, the FCC is STILL NOT involved...nor would
I expect it to be. The arguing of the federal
pre-emption is all under my legal position.

5. Do you expect the court to "enjoin" the FCC directly
at that point? If so, by who? If not at the appeal level,
then why or how would the state supreme court
level be any different?

They'd have to do so by changing the Bill of Rights first.
Not an easy task.

Good, then we agree that if a neighbor complains about another
neighbor's CB operation, and upon investigation it turns out
the CBer is operating in full compliance with FCC rules, then
no further action can be taken under local law.

> > HR2346 allows local governments to empower their

The point is still one of enforcement...and even you
note that many of said ordinances exempt hams.

> Many of them exclude hams, many don't.

> The desire was there, and so was the proof. The deciding issue was federal
> preemption. But hey, nothing lasts forever.

Many of those types of RFI laws are not for incidental RFI,
but rather they were created to take action against anyone
deliberately interfering with police transmissions...usually
using an acctual radio setup to transmit on the police frequency.

Yes, but, the bylaws of such a planned
community are not laws at all, but rather they are
contract clauses.

Yes it is legal...but it isn't done under local township ordinance.
The "planned community" is done by contract law. As a buyer,
you agree to the terms of the community's bylaws when you
purchase the property.

If you
violate the bylaws, the community or homeowners association
takes a civil action against you under contract law...it does
not involve the township at all other than the case probably
being handled in the local court system.

> >A town can't outlaw operation of CB, Ham or any other

What happened to "the majority rules" on the local level? You
placed no criteria as to federal vs local in your original
expression.

Cheers,

I was thinking more along the lines of weak limiters/poor AM rejection, but poor
supply regulation could just as easily be responsible for what you describe. In
that case a power line filter won't do the job -- you would need either an
isolation transformer, or run the power cord with the coax (if there is coax).

>>People are funny. When I was a kid I put up my first CB antenna on the roof.

No kidding! And remember those plug-in doo-hickeys that allegedly used the power lines for a TV antenna? They did nothing but establish a power/antenna loop that turned the TV into a very good white noise generator.

>> The way RF gets into a TV hooked to CATV (or a long run of

That much is obvious. My point is that radio operation requires a level of
responsibility as high as the level of the privelege.

>>The other person is doing nothing to interfere with the ham. It

So the interfering ham should just brush off the neighbor and transmit anytime
he wants just because he can? That's not very fair, is it?

>Some people are happy if you stay quiet during certain sporting
>events. Other people will settle for nothing short of the total
>elimination of any and all interference. I've had to deal with some
>people so paranoid that they feel that the ham might give them cancer
>as a result of the RF exposure. How do you fight that level of
>paranoia?

I dunno. Ask Twisty. But looking at it from the other person's point of view
helps a lot. For example, people have a reasonable expectation that things they
own and use should work they way they were intended. Manufacturers can't make
things bullet-proof, and there will always be some vulnerabilities. So they have
to limit those vulnerabilities to what can be expected in normal, everyday use
by the vast majority of people. Close exposure to ham radio transmitters, I
don't think, could be classified as normal, everyday use by the vast majority of
people.

You have to draw some lines somewhere. There are what.... about 100,000 hams in
the US? Out of more than 300,000,000 people? So is it unreasonable for people to
expect that their modern appliances don't talk to them in the voice of the ham
next door? Sure it is. Whose responsibility is it to make sure that doesn't
happen? The manufacturers? No, because they make these products for the millions
of people who pay for them, not the thousands of hams who interfere with them.
It's up to the ham to make sure he doesn't piss off his neighbors. That's the
bottom line.

>>From a different perspective, and assuming you can prove that your signal is

>now begins to infringe on that person's right of individual choice.
>It's never a pretty sight.

Well, human nature is such that hams become very definsive at the mere suggestion that the manufacturer of that equipment isn't the person transmitting RF into your neighbor's home. And that person's right of individual choice was limited by the actions of the ham and nobody else.

>>>>I agree with you 100%, and one of those "special interest" groups is the ARRL.

>stop all cold weather? Afterall, that cold weather is "intruding" into
>someone's home. Why should a homeowner take steps to block these
>intrusions? They should be eliminated at the source.

Cold weather is a normal fact of life that everyone expects to happen and therefore prepares for. Home intrusions by weather or anything else has a high probablity of occuring if there is no door. OTOH, most people will live their entire lives without ever witnessing a case of RFI. So why should everyone have to "buy a door"? It is just plain unreasonable to expect 300 million people to spend their time and money to protect themselves from the occasional ham radio operator.

The world does not revolve around ham radio.

>That's basically the position you are taking.
>
>>It's a nuisance like any other nuisance,
>>except that it's a nuisance which is protected by a federal law.
>
>Being told to give up an important hobby and passtime, is a "nuisance"
>as well. It all depends on your perspective.

How about the FCC telling people that they must either give up the use of their TV, cordless phone, and whatever electronic gadgets they use, or pay gobs of money to get the house under an RF condom, just because some ham moved in next

door and wants to play with his radio? That's not a nuisance?

Is there something I'm missing here? Are hams some sort of superior race that the rest of the world must crawl in their presence? What right do hams think they have to take away the rights of others for the sake of a hobby? Am I the only person that can see the arrogance of that kind of attitude? Or is that what the human race is evolving into and I just got left behind? If that's the case then stop this thread because I want to get off!

It is possible, but what are the odds that both will be down at the same
times, especially since I have backup for ham radio. It is much more
likely that the cell phone or cell phone system will leave me without
cell phone communications than my ham radio will leave me without the
ability to communicate via ham radio.

> Nobody knew where anyone else was for 80-90% of the time.

Good lesson for 'em on the frailties of the technologies they think
they'd die without. How did we ever survive the throes of puberty
without a cell phone glued to an ear?

> I was the only ham there, so I'm not suggesting that ham radio would have
> been a solution. However, if there had been some sort of HTs (FRS or the
> like) that would have worked where cell phones failed altogether. One
> family did bring a pair of FRS radios and were able to stay in touch.

Sure. I live upstairs, another Extra lives downstairs. We use a pair
of FRS HTs all the time to communicate with each other. "Mailman just
dropped off some for you Bub". They're perefect for comms during
"antenna parties", etc.

Bugles worked when I was a Scout. Especially chow call. Heh.

> And
> yes, there are other solutions to coordinating groups of people that don't
> rely on radio atall, but once you actually rely on radios they better work.

Amen.

> My point? Even in the absence of a disaster cell phones are not the answer.
> In an actual disaster situation relying on cellular is foolish. Yes, it may
> work. Or not ...

The last emergency comms gear I'd depend on out in the bush is any kind cell phone or ham gear, simple common sense indicates that both have to completely unreliable when it comes to summoning first responders. And it gets worse than idiotic in the case of this Bonnie nitwit who thinks that some qrp op on a mountain in South America is going to be able to reliably call a ham in North America to launch an S&R operation in SA.

Real scientific expeditions, which Bonnie's cave-crawling trips are not, use real emergency comms gear. ELT type equipment on 406.025 Mhz to satellites which are monitored by goverments globally, air band HTs on 121.500 Mhz, etc.

Easy to say when you've taken all your tests and never have to
take another test (if you renew within time bounds).

Put yourself in the newcomer's place and look at it from their
vantage point -and- that of the FCC.

But, I don't think you will. You will, like way too many others,
look at it from your own personal viewpoint and experience and
desires and by default try to make all newcomers think as you do.

You can't freeze testing as it was in 1976...or 1986, 1966, 1956,
1946, or 1936. The overall environment is constantly changing
even if your personal activities isn't changing.

It doesn't sit well with you that you are cast with the pro-code caste?

Some hams NEED a caste system just to prove they are "better"
than others, thus fulfilling a self-deficiency.

For a very long time morse code ability was the caste marker,
having no reasonable value except for some to brag that they
were "better" than no-coders.

Tsk, tsk, tsk...all the pro-coders beginning to cry and whine...?

I just came from a seminar with USN Rear Admiral Daniel Stone, Director of Logistics and Engineering for NORAD/USNORTHCOM, he reports directly to General Eberhart, commander of NORAD. One of the issues discussed was emergency communications in times of disasters like 9/11. I ask him about the use of cell phones during such times, he just laughed and said that the cell phone network was useless for any emergency comms in such a scenario. Witless willie's cell phone network is not even a consideration in their emergency planning. He also works with The Office of Homeland Defense on emergengy communications issues and he confirmed that the OHD is attempting to intergrate Amateur Radio in their plans for emergency comms.

But why forbid them from experiencing such an activity?? That makes no sense in light of the basis and purpose of amateur radio as stated in the current Part 97. They should not be required to homebrew nor should they be prevented from home brewing.

>

The problem is NOT in the licensing structure. There is no structure that will dramatically increase the number of amateur radio operators, not even a no test license. The non-licensed services have proven that. Today CB activity is way down. It is so low that there are now people who not only have not heard of ham radio, they haven't even heard of CB!

The actual problem is stems from several elements. 1) Most people outside of amateur radio have never heard of it. So even if they might be inclined to pursue this hobby, they will never be involved. 2) Amateur radio, as with any specialized activity, is only going to appeal to a limited number of people in the first place. 3) There is a greater multitude of hobbies and activities available today than ever before. People have to make choices on how to spend their time and money.

I've seen no evidence of ham radio "dying on the vine". The listing of SK's has shown no quantum leap. The number of new licensees exceeds the number of licenses expiring.

HAW!

But it just points out how ridiculous that part of the NCVEC proposal really is.

Here's two more:

1) Audiophiles and radio restorers build and work on all sorts of high-voltage electronics without any test. Why is a ham transmitter so dangerous if it has more than 30 volts, but not a ham receiver or a stereo amplifier?

2) Low voltage is no guarantee of safety. A 100 watt transceiver powered by 13.8 volts will typically require 20 A or more to transmit full power. 35 A and 50 A supplies are common. Don't get your rig across those terminals...

>

It's what NCVEC is trying to sell. Some folks here seem to be buying it. I don't.

Some of the main Basis and Purposes of the ARS are technical education, experimentation, and related stuff. Limiting *any* class of ham license to manufactured gear and so many final volts directly contradicts those B&P.

> Testing would certainly be easier!

One wonders what would be left to test!

And here's the bottom line:

If there is *anything* that *must* be part of testing for a ham license of
any class, it's safety and the rules and regulations. No exceptions, no
signed statements.

What you are seeing is exactly what I predicted about the anticodetest
arguments being used against the written test.

1150. If ham radio were created today

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-18 01:52:59 UTC
From: "Dee D. Flint" <deehays@qix.net>
Message-ID: <%h76c.13182$t16.7668821@newssvr28.news.prodigy.com>
Source record: 89114

Well here's a possible scenario if ham radio came into being today. It is based on the following hypothetical history.

1. Radio was developed by commercial interests and government.
2. Hams were allocated bands as the commercial interests and government interests increased or decreased usage of bands.
3. Hams would be allowed technical experimentation. This is quite a stretch as it would be hard to justify when there is no history of contribution by hams.

Based on this here is what I would conjecture.

1. Amateurs would have no VHF or higher frequencies as these would be completely allocated to commercial and government interests.
2. Limited HF access would be granted as the commercial & government users migrated to satellite for worldwide communications.
3. Initial operations would be HF AM as sideband probably would not have been developed by commercial interests and only experimented with in government/military apps.
4. No FM would be allowed as hams would have no bands with sufficient bandwidth available for FM use.
5. Eventually hams would turn the experimental government use into practical application since they would need to find ways of narrowing the signals to permit more users to occupy what would probably be much more limited HF spectrum than we now enjoy.
6. Hams would try developing digital modes. Probably the first to be tried would be packet as it uses a modulation scheme like that which connects computers to the Internet. Since HF packet would prove to be too subject to disruption by natural static, it's use would become minimal after the initial flush of excited experimentation just as it has done in the real history.
7. Hams would then search through other possible digital modes and eventually light on RTTY, long abandoned by military users, but sufficiently robust to stand up to the vagaries of HF propagation reasonably well. This would a fairly steady level of popularity.
9. However hams would continue to experiment with modes. They would seek simple, basic non-computer driven mode to use when voice was getting not through and when computer was unable to decipher the digital signals. They might light on the idea of using Morse code transmitted via a simple on/off keying of the radio. As a simple, reliable, portable mode of operation, it would be as popular as voice and far more popular than digital. There would be frequent contests and everyone would be pestering the experts for tips on how to get better at code.

The greatest difference between ham radio coming into being today versus the actual history of ham radio is that amateurs would have no access to VHF and higher frequencies. This I think would be quite a sad development.

I like a challenge! Some people do not. I think that one of the most
damning things about the age that we live in is that somehow, some way,
those who want no challenges are in their ascendancy.

1152. AMATEUR RADIO ENTHUSIASTS COME OUT SWINGING IN OPPOSITION TO NPRM ON BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-18 02:33:23 UTC
From: Steve Stone <spfleck@zzcitlinkzz.net>
Message-ID: <MPG.1ac2d46d1b655d359898d2@news.frontiernet.net>
Source record: 89116

****
AMATEUR RADIO ENTHUSIASTS COME OUT SWINGING IN OPPOSITION TO NPRM ON BPL
INTERFERENCE ISSUES

Amateur radio enthusiasts are submitting copious comments that are flooding the docket for the FCC's notice of proposed rulemaking on broadband-over-powerline technologies. The comments are coming well in advance of a May 3 due date.

"From what I've seen, BPL will wipe out the [high frequency] and some [very high frequency] bands," said one typical filing. "It's been rejected in other places and should not be allowed in the United States.
In an emergency, government and communities are loosely held together by using these bands with emergency communications. Don't let Big Money outweigh the good of our country."

Sources say the FCC has been respectful of amateur radio concerns but also has recognized that they may not reflect real problems. "The FCC has determined that the end-of-the-world interference scenarios put forward by some in the amateur community are unrealistic," said Mitchell Lazarus, a lawyer who represents BPL service provider Current Technologies. "The NPRM is a good beginning of the process of finding a fair balance between the needs of broadband users and users of the radio spectrum."

Last month when the FCC approved the NPRM, Commissioner Jonathan S. Adelstein said, "While we must be mindful of harmful interference, we cannot let unsupported claims stand in the way of such an innovation as BPL systems."

The FCC approved the NPRM on Feb. 12 and released it 11 days later, but it was not published in the Federal Register until today, starting a 45-day clock for comments. Reply comments are due 30 days later. - Howard Buskirk, hbuskirk@tr.com

Apparently there's NO reading, either. The only power limitation of
the NECVEC petition-proposal is in a 400 KHz low sub-band on 10m
for the three lower classes.

Re-read the NECVEC petition-proposal and report back.

>
>But I've not seen anyone claimed to have been harmed by rf.

It might have been Mike or Bill in writing the limits of emission
power in the NECVEC petition.

I just read it through and the ONLY limitation is the NECVEC
modification of 97.313 (c) which states "no station may transmit
with a transmitter power exceeding 200 W PEP on -(2)- the
28.1 - 28.5 MHz segment when the control operator is a Novice
Class operator, a Technician Class operator or a Technician Plus
Class."

If those folks are going to argue about things, they ought to get
their sources in order. The way I see it, Mike Coslo hasn't seen
the NECVEC petition. It's only 9 pages.. They must be arguing
the ARRL petition in the wrong thread. ?

You, Len, like way too many others, look at things from your own personal viewpoint and experience and desires and attempt to dictate regulation of amateur radio from that perspective. You'd have all the newcomers think of a five word per minute code test as an insurmountable obstacle.

> You can't freeze testing as it was in 1976...or 1986, 1966, 1956,
> 1946, or 1936. The overall environment is constantly changing
> even if your personal activities isn't changing.

"Activities isn't"?

Testing was changed again just a few years back. You know, around the time you were going to get an "Extra right out of the box". You really mustn't rush into these things. Take a few decades. Try to decide about GETTING INTO AMATEUR RADIO. Then all you have to do is wait and hope that the requirements will be lowered enough so that you can get in.

"Submitting copious comments?!?!?"

As of the close of offices on 17 March 2004, there were exactly 25, that's TWENTY-FIVE comments on Et Docket 04-37. There are exactly 5 on ET Docket 04-29.

THIRTY comments (a few are doubles in each docket) is "copious?"

If you want "copiousness" then go to ET Docket 03-104 where there were 5,731 comments filed as of close of 17 Mar 04.

The only problem is that NOI 03-104 has ended.

If you look carefully down a few hundred on the ECFS page for 03-104 you will see that ALL the documents filed between 6 Feb 04 and 20 Feb 04 are "Sunshine"...the staff can't look at them to use for decision-making. Noticeable RED letters on those Sunshine notes.

>The FCC approved the NPRM on Feb. 12 and released it 11 days later,
>but it was not published in the Federal Register until today, starting
>a 45-day clock for comments. Reply comments are due 30 days later. -
>Howard Buskirk, hbuskirk@tr.com

Okay when is the "today" in the second line?

If you MUST quote someone playing reporter, please try to get the proper dates in there. You posted this on 18 Mar 04 as indicated on the header. [it's still 17 Mar 04 here on the west coast as I write this and has been circulating in the Internet posted on 17 Mar 04 in the

USA - USA is on 7 time zones, none of which are UTC] The FCC stated RELEASE date of 04-29 was 23 Feb 04. What is the date you are claiming for publishing in the Federal Register?

I count 46 days left until 3 May 04 from today, 17 March 04 (Saint Patrick's Day). "45 days" would mean you have posted in ADVANCE of a news break. Not a good thing in journalism circles and won't look good on your reporter's resume...not even if you get supernatural advance copies of a newspaper.

But, "45 days" isn't the end of comments. There's 60 [SIXTY] days from publishing in the Federal Register for Replies to Comments.

Not everyone reads the Federal Register at breakfast. Some don't even read petitions carefully.

Okay, there's still ALL of April to file comments on NPRM 04-29. Your name hasn't come up on the FCC's ECFS yet you are here trying to "scoop" someone?

If you want a "news scoop," investigate some dates. Look at the first document in the ECFS under docket 04-37...that's NPRM 04-29 and indicated as posted 23 Feb 04. However...the next document is a preliminary statement by the National Antenna Consortium and Amhearst Alliance and it is dated 19 Feb 04 (the document itself bears that date)! Which is what there?

The next two comments have posting dates of 24 Feb 04.

Find out why NPRM 04-29 is under docket 04-37 instead of the other docket in the ECFS, 04-29. If there is a docket 04-29, why is the NPRM posted under docket 04-37?

Why isn't the "Sunshine" notice continued on about 500 comments under docket 03-104 from 21 Feb 04 to today? That NOI should be toast...but the FCC hasn't removed 03-104 from the "hot button" listing on the FCC Consumer Complaints page.

If you can't consider a compound error situation at the FCC, then wonder why the mixup in dockets and that 03-104 is still there receiving comments when they won't be seen by staff? Can you smell something strange going on in DC (besides the usual) like diverting citizens' attention to post in what amounts to a digital trash bucket?

Some people probably will choose a hobby that doesn't require taking a test
to get a license to do it. So we have to get a prospective ham person past
that chore. Not a big chore, but still a chore.

Quoting from the NCVEC restructuring petition (not the press release, the actual petition):

(begin quote)

II. PROPOSAL

D. Creation of a new entry level license.

....

19. Basic framework of the new entry level license:

....

d. Power limits: Limit transmitter output power levels to 100 watts on all frequencies below 24 MHz, and 50 watts on all frequencies above 24 MHz. This allows enough power for adequate communication under most circumstances, and matches the nominal power output of the largest number of commercially available transmitters and transceivers available as of this writing. The use of these suggested power levels also removes the necessity for RF safety evaluations, as the power levels are below the stated threshold values for the frequencies concerned.

e. Additional electrical limits: No transmitter or transceiver may incorporate a final amplifier stage that requires more than 30 volts DC for normal operation. The goal of this restriction is to prevent, as much as is possible, injury to inexperienced operators. All known current production Amateur Radio transmitters and transceivers, including kits, available as of this writing, operate using 28 volts or less for the final stage. While this restriction of necessity prevents use of some "legacy" or "vintage" equipment, it is not likely to be a serious impediment to assembling a station.

f. Additional technical limits: No transmitter or transceiver may be used unless it is of commercial manufacture, or built from a kit of commercial origin. The reason for this provision is to prevent, as much as possible, spurious emissions from units lacking proper engineering design. Again, we realize that this leaves out one of the traditions of Amateur Radio, namely that of building your own station from "scratch". However, we note that technically inclined persons are likely to upgrade fairly quickly to a General Class license, where this restriction, and that of the previous paragraph, is no longer an issue.

(end quote)

Table of Contents
AMATEUR RADIO ENTHUSIASTS COME OUT SWINGING IN OPPOSITION TO NPRM ON BPL INTERFERENCE ISSUES

Amateur radio enthusiasts are submitting copious comments that are flooding the docket for the
FCC's notice of proposed rulemaking on broadband-over-powerline technologies. The comments are
coming well in advance of a May 3 due date.

"From what I've seen, BPL will wipe out the [high frequency] and some [very high frequency] bands," said one typical filing. "It's been rejected in other places and should not be allowed
in the United States. In an emergency, government and communities are loosely held together by
using these bands with emergency communications. Don't let Big Money outweigh the good of our
country."

Sources say the FCC has been respectful of amateur radio concerns but also has recognized that
they may not reflect real problems. "The FCC has determined that the end-of-the-world interference scenarios put forward by some in the amateur community are unrealistic," said Mitchell Lazarus, a lawyer who represents BPL service provider Current Technologies. "The NPRM
is a good beginning of the process of finding a fair balance between the needs of broadband users and users of the radio spectrum."

Last month when the FCC approved the NPRM, Commissioner Jonathan S. Adelstein said, "While we
must be mindful of harmful interference, we cannot let unsupported claims stand in the way of
such an innovation as BPL systems."

The FCC approved the NPRM on Feb. 12 and released it 11 days later, but it was not published
in the Federal Register until today, starting a 45-day clock for comments. Reply comments

are
due 30 days later. - Howard Buskirk, hbuskirk@tr.com

That too! As proved elsewhere, you hit that one dead-on.

The deadline for comments is May 3. Today is March 18. Some of us are already working on comments. Such serious stuff should not be rushed, though, and need to be thoroughly proofread and spellchecked. And the comments need to go two places since two sets of regs are changing.

ARRL has been beating this drum from the first. Full details at

>
>
>Sounds like a bad limiter.

Or rectification in an audio stage. For a simple AM detector, you only
need a half wave rectifier. Practically any semiconductor device has
this capability. When the volume control has no effect on the
intensity of the RFI, it's a sure bet that the interference is being
coupled into a stage downstream from the volume control.

>>>Finding the source of RFI is just like troubleshooting any other piece of
>>>electronic equipment. Take your spectrum analyzer to where the interference is
>>>occuring -- it doesn't do any good to measure signal strength where it doesn't

>
>
>Exactly! Sympathetic vibrations. It's like your signal is tapping someone else's
>tuning fork.

That's one way to look at it. But be that as it may, finding the
causes is only half of the trouble. Trying to convince unrelated third
parties to participate in your crusade, can be even tougher,
especially when there is nothing in it for them.

People tend to look at any "tampering" with their property as a
potential for future problems. You then unwillingly assume the
liability for any problems (related or not) that my occur for many
years afterward.

>>But unless these culprits are on your own property, you have no
>>control over them. If I find that "harmonics" were being generated as
>>a result of rectification in my next door neighbor's siding (a

>termites but won't let the exterminator do his job.

Some people are unwilling to accept that the source of the problem is
in their equipment, and expect that the radio op "fix" the problem on
his end. Since this may not be possible, you can quickly reach an
impasse.

>> Also, I am not
>>comfortable with adding any devices to people's equipment, as in their

>from a Ranger without looking at the ID tag, I -can- give a qualified opinion on
>other issues. I digress.....

That sheds some light on your position. Someone who has spent
considerable time learning a trade, tends to get defensive and
contradictory when an "amateur" tries to tell them what to do. But the

truth is that sometimes professionals become too "scripted", or set in
their ways, and may refuse to consider other options, especially when
they come from people who they consider to be their technical
subordinates.

>>I can't explain it either. But I've been a party either directly or as
>>a "consultant" to other people, who have had RFI issues. From

>>the full strength fundamental?
>
>
>It's the basic amplifier circuit. Any amplifier will oscillate if given enough
>feedback in appropriate phase.

It's even simpler than that, any amplifier which contains
semiconductors, can rectify an R.F. signal, if those circuits are not
bypassed properly.

> An RF signal can be enough to cause a high-gain
>amplifier to oscillate. It might oscillate on the frequency of the stimulating
>signal, or it might just sit there and 'ping' on it's own resonant freq. But one
>thing is common to most of these devices, and that is they are most suseptible
>to frequencies in the high-HF and VHF portions of the spectrum. I don't know
>exactly why that is, but I suspect two possibilities: the physical size of the

I tend to agree with this notion.

>The other idea is that while some equipment is intentionally protected
>from strong AM broadcast signals, the efficiency of the filter drops off with
>increasing frequency. Of course those ideas are nothing more than speculation,
>but they are things I intend to pay attention to in the future.

Some line filters, which are designed to block 60 Hz components may
also work fairly well at 500 Khz, but are totally ineffective at 28
Mhz.

>>>The FCC 'investigators' rarely visit the scene to determine the cause of
>>>interference. If you read those cases in the FCC database they simply reflect
>>>what is claimed by one party or the other, but usually by the ham.

>>limiting their exposure as an RF "bad guy". If they can "explain" away
>>RFI problems as IMD products from another transmitter (A "sloppy" ham
>>for instance), they can deflect their responsibility in the matter.
>
>
>On the contrary, most stations are perfectly willing to admit any case when
>their emissions exceed specs.

If their feet are put to the fire. Like any other "for-profit"
operation, they will not volunteer to call attention to a problem that
would most likely result in an expenditure of money to cure, unless
someone else "outs" them first.

> In fact, such instances are required to be logged
>in the station's records.

Sure, along with the meter readings on the transmitter and the hours
left on the tubes, and any maintenance that was performed.

>What broadcast stations -don't- like is being blamed
>for interference that is caused by other sources, such as keyclowns and a few
>dirty hams. I'm sure that good hams can appreciate this point of view since they
>are always getting a bad rep because of the keyclowns.

In that case, I'd agree. But you and I are talking about 2 different
things. On the one hand you have the case of a "dirty" ham or CB'er
blocking the reception of a legitimate broadcast station. On the other
hand, there are RFI complaints leveled at a broadcast station for
interference to nearby consumer devices, in the same vein as that
which is leveled against hams and CB'ers.

So, what are you saying here? That because I am a ham and not "normal"
I don't deserve the same consideration and protection when it comes to
RFI? Are only technical illiterates allowed to "make noise" about RFI?

>Another difference is that as a ham you -expect- and -accept- such
>issues as receiver overload and RFI. Most people don't.

Maybe they should. Some people need to understand the fine print in
Part 15 which states that these devices will not generate
interference AND has to accept all interference.

>>>Damn straight! It's good PR, great WOM advertising, and it's well within the
>>>station's rights to try to resolve any source of interference to its signal.

>
>
>That's way off base, Dave. We don't deflect anything. If a listener calls us and
>tells us that something or someone is interfering with their reception of our
>transmissions we will check it out.

Why? That's the FCC's job, not the radio station's. The radio station
is only responsible for making sure that their transmitter is not
"dirty", or trying to provide solutions to reduce interference from
THEIR transmitter. It has no place intervening in a situation which
involves a third party transmitter.

Since your time is money, the only reason I can see where the
management of a radio station would condone this sort of "charity"
work, would be for P.R. reasons. Who else but the mass media could be
responsible for spinning issues into larger monsters than they are, in
order to advance an agenda. No one need look any farther than the
democratic party and the propaganda that it spreads through the
liberally slanted media to see that.

> Like I said before, most of the time it's a

>problem with RFI even in a noisy environment.

When I get some time (I know I sound like a broken record), I'll look
into it a bit more. I suspect that it's either speaker wires or the AC
line cord that is the ingress point. I'll eliminate all connected
accessories (Which were also on my old Fisher stereo, lest you want to
say "Ah-HA, it's the accessories that's causing the problem), down to
the basics and go from there.

>>I agree with this 100%. The problem is that many neighbors wait until

>
>
>I kinda have to agree with them there. If ya wanna play, ya gotta pay.

I'm sorry, but I'm not paying to replace a $5000 HD component TV system. I'll spring for a high pass filter or a toroid AC line filter. But I'm not going to enhance his viewing experience on my nickel. I don't even own that type of equipment myself (maybe that's why I am immune to my own RF). A simple TV, with a VCR and a DVD player attached.

>> I had another
>>ham friend who hung a tray full of high pass filters on his front door
>>with a note that basically said, "For TV interference, take one filter
>>and call me in the morning".
>
>
>That's pretty good! How did the neighbors react?

A few of the filters had been taken. He moved out to a better house a few years later, so I don't know if his solution was totally effective and to what degree. I imagine that it must have helped since he was only affecting the neighbors who were not on cable. Those who still had outdoor antennas, would 've benefitted by the reduction of his signals by the high pass filter.

You have audio coming from the gutters? Hmmm..... I've heard audio coming from a
chain-link fence, but it was the perimeter fence for a 50kW tower.

Absolutely should be discussed.

I ask him
> about the use of cell phones during such times, he just laughed and said
> that the cell phone network was useless for any emergency comms in such
> a scenario.

For military use, absolutely. I wouldn't expect a senior military
official to respond differently.

Witless willie's cell phone network is not even a
> consideration in their emergency planning.

Shouldn't be. It's not secure.

He also works with The Office
> of Homeland Defense on emergengy communications issues and he confirmed
> that the OHD is attempting to intergrate Amateur Radio in their plans
> for emergency comms.

As they should; the military has backups to backups. Redundancy
equals Survivability.

Now lets talk about Average Citizen (AC). AC has actually used
cellular telephones IN the 9/11 emergency. Many ACs had successful
communications. AC has greater access to the cellular telephone
system than they have to amateur radio. For many ACs, cellular is
their emergency comms.

Do you doubt it?

Frank;

Suck Zone? I looked at the link, didn't see what part of it you
were referring too. Do you think there is a "zone" outside the
physical demensions of the antenna that "sucks " the RF toward it?

> will be there if needed.

This weekend will see "Heartland Response 2004" conducted in
Western Tennessee and parts of Mississippi, Arkansas, Kentucky and
Missouri.

It will simulate (among other things) and earthquake along the
New Madrid fault.

One of the scenarios to be practiced for will be the loss of
commercial telephone service, both conventional hardline and wireless
service.

Of the several senarios that WON'T be playing will be one wherein
cellphones are deployed to provide "emergency comms" because of a loss
of RADIO communication, regardless of whose radio service it is.

Among other features to be deployed will be HIGHBIRD missions
flown by Civil Air Patrol to provide orbiting radio relay capabilites
in addition to datalink service.

Yours truly will be at the EOC in Nashville. As of this hour I
do not find the names of "Brian Burke" or "Leonard Anderson" among
those consultants being brought in by FEMA, The Army Corps of
Engineers, TEMA, or other supporting agencies.

ARES and RACES will be represented, however.

Go figure, huh...?!?!?

Steve, K4YZ

PS: If any of you are "Utility DXers" and log "TENNESSEECAP TEMA" or
"TENNESSEECAP 250" on Saturday the 20th or Sunday the 21st, QSL via
K4YZ and I'll be glad to return a card for you.

Do you get to vote on who represents your VEC at NCVEC? Do individual
VEs have any say at all?

It seems to me that NCVEC wants to get into the regulatory side of
things without having to get input of *any* kind from the VEs
themselves.
>
> > This NCVEC thing is very similar to the "Amateur Radio in the 21st

I don't see *any* improvements over the ARRL proposal. What do you
see, besides no code test for Extra (ARRL proposal drops all code
testing except 5 wpm for Extra)?
>
> I'm not in favour of making the theory requirements easier.

But that's exactly what the NCVEC proposal does - to an extent even
greater than the ARRL proposal.

> Both of these
> plans upgrade all the Techs to General just to add a lower class licence
> without increasing the number of classes. This is because they know the FCC
> won't accept anything that makes the end result more complicated.

They also upgrade Advanceds to Extra.

> I don't think we need an easier theory test to attract people. If someone
> is genuinely interested they will learn the theory.

I agree 100%. NCVEC doesn't - where is the "improvement"?

> What we need is simply
> publicity. Most people are scarcely aware that ham radio even exists.

Too true.

But we also have to accept that only a small percentage of those who
become aware will be interested, and that of those who are interested
only some will actually become active licensed amateurs regardless of
what is done to the requirements.
>
> The code test does need to be dumped to get over the hurdle of potential
> recruits who immediately lose interest when it is mentioned.

I disagree. People who are *really* interested will learn 5 wpm. That
has been demonstrated over and over again.

> No-code
> licencing for VHF+ did not eliminate that problem, no matter what anyone
> says to the contrary. Any intelligent person knew that code testing was
> only postponed if they wanted HF.

Sure - but not all want HF, or can get on HF effectively.

> However, most people don't even get that
> far. Our visibility is zero.

Not zero, but not as high as it needs to be.

> Besides, I am sure that the FCC will eliminate
> Element 1 anyway.

Let's say for a moment that you're right, and Element 1 is simply
dropped for all license classes. Which proposal do you think is better
- ARRL's or NCVEC's, and why?
>
> By all means restructure, but these petitions are misguided.
>
I agree that NCVEC's is very misguided.

No, not just for military use, they are coordinating between military, police, fire, Civil Defense, and other civil agencies, and cell phones play no part.

>

> Do you doubt it?

It dosen't even work well for the AC when the networks become so overloaded you can't get a call through. The AC is not participating in official emergency communicatins, they are making calls to say, "Im OK", or "turn on your TV", and other such non official emergency calls. When something like 9/11 happens everyone with a cell phone wants to call twenty other people making the system usless for any official emergency communicatioins.
The cell phone network is not a consideration amoung government and civil agencies for emergency communications, ham radio is.

Toroidal coils on the AC line had helped in this case. In the case of
TV's with detached component speakers or cheap stereos, the speaker
wires are also a source of ingress. Many times people space speakers
apart in opposite directions, and they may be separated at a distance
of the width of their family room, which is often 20 feet or so. Can
you say "dipole" antenna at HF frequencies? The RF gets picked up by
the speaker leads and gets coupled into and demodulated by the power
amp of the stereo or TV. In this case, bypassing the speaker leads
with small caps, or running coaxial speaker wire can help.

>>>door whining about interference. A couple years ago I put up my first lowfer
>>>antenna. It is quite tall (60 ft.), and can be easily seen by the neighbors. But
>>>this antenna was used only for receiving, not transmitting. Well whaddya know, a
>>>couple weeks after the antenna went up another neighbor comes a'knockin' at my
>>>door whining about interference. Funny thing was that I hadn't even finished

>>>building the receiver!
>>
>>Oh boy! have you hit the nail on the head there. People have other
>>interference problems (squirrels chewing their antenna lead)....
>
>
>Have a mouse problem here. Cute little things, but they sure do shit a lot.

That's why I used to have cats.

>>
>>Key word: "best". Ground wave has some effect throughout the HF bands.
>>It can also propagate signals into neighboring homes.
>
>
>....um, wouldn't that be better classified as near-field radiation and not
>ground-wave propagation? How far away are your neighbors' houses?

The line between where near field radiation ends and ground wave picks
up is not always obvious. If the guy receiving the interference is 4
doors down the street, I tend to think that he's outside the "cone" of
the near field. But I could be wrong.

>>There is no excuse for short cutting engineering. Saving money is
>>their only motivation. Old man Muntz is alive and well in the consumer
>>electronics market.
>

>>mobile services.
>
>
>They were changed to the new specs in 2002. I'll dig up the code later. If I
>remember correctly, it only applies to devices of new manufacture.

I'll have to look this up. This is the first that I've heard of any
changes. Naturally, I'll want to do what I can to stay in spec, even
if existing equipment is "grandfathered". It makes for a better
defense if you already meet the tougher specs, and you receive an RFI
complaint.

>>I don't know as I never physically had the device in my hands. That
>>might be the one, as the better design used CATV gain blocks, which
>>were internally stabilized.
>
>
>The one I'm thinking of had a 20/40 dB switch. Does that help?

Don't know, I never actually saw the device. The potential source of
the problem was brought to my attention by a repeater user's group who
had documented similar problems. We had been trying to locate the
device which would come and go depending on temperature and humidity.
As luck would have it, as we were getting close, a summer thunderstorm
may lave produced a fatal lightning strike, as the interference
suddenly ceased.

>
>
>>>The toroidal choke works better if you split the wires and wind them in opposite
>>>directions on the core.
>>
>>Yes it does, but that involves more work. If it works without going
>>that extra mile, then we don't have to "damage" the neighbor's
>>equipment.
>
>
>I set aside a day or two each month to make 'trinkets', for lack of a better

>Well, if hams are expected to be the FCC's technical liasons to the general
>public, maybe they should put that in the rules.

Not technical liaisons, just self policing.

>>
>>Last time I looked RF doesn't observe borders either real or imagined.
>>It is impossible to prevent (Unless you want to enclose your house in
>>a faraday cage) RF from "polluting" your airwaves.
>
>
>That much is obvious. My point is that radio operation requires a level of
>responsibility as high as the level of the privelege.

And that responsibility extends to the operation and maintenance of
his equipment. That responsibility becomes unreasonable when extended
to include the prevention of RF ingress into neighboring consumer
devices (Which should have been done by the manufacturer). IMHO it is
unfair for the manufacturers, by choosing to cut corners, to place
this burden on radio ops. At the very least, the manufacturers should

be held accountable as enablers or orchestrators of these incidents by facilitating the easy reception of RFI.

I remember the earlier days of ham radio. If a ham interfered with a TV, he made a trap out of a length of twinlead, and placed it across the TV's antenna terminals, and that usually was all it took. The issue today has become way more complicated. Which is ironic, since most hams use commercial equipment these days, and those ham radios have become cleaner then they ever were, so the percentage of "dirty" transmitters has dropped in the last 40 years, yet the incidents of RFI has increased dramatically..

>>>The other person is doing nothing to interfere with the ham.

I would consider incessant complaints to be a form of "interference".

>>>It should be up to the ham to use his radio in a way that doesn't cause problems
>>>for anyone else.

That's like saying that everyone should drive their cars as to not emit pollution.

>>In other words stop transmitting. Hardly fair. Especially when the
>>person with the interference can fix the problem by buying better
>>consumer devices.
>>
>>> Point the antenna in a different direction. Use a different
>>>antenna. Make an agreement with the other person to only transmit at certain
>>>times (more commonly called 'sharing'). There is no reason a ham can't stop his
>>>interference, or at least limit it to an acceptable level.
>>
>>What's considered "acceptable" is subjective. And that difference in
>>perception is the source of most of the contention. Most people work
>>during the day time, and enjoy their "entertainment" at night. That
>>leaves a fairly small window for compromise where either party isn't
>>giving up something that is important to them.
>
>
>So the interfering ham should just brush off the neighbor and transmit anytime
>he wants just because he can? That's not very fair, is it?

The converse to that is that the ham should transmit at all?

>>Some people are happy if you stay quiet during certain sporting
>>events. Other people will settle for nothing short of the total
>>elimination of any and all interference. I've had to deal with some
>>people so paranoid that they feel that the ham might give them cancer
>>as a result of the RF exposure. How do you fight that level of
>>paranoia?
>
>
>I dunno. Ask Twisty.

I'd rather not. As Hank Hill would say; "That boy ain't right".

>But looking at it from the other person's point of view
>helps a lot. For example, people have a reasonable expectation that things they
>own and use should work they way they were intended.

Including ham radio.

> Manufacturers can't make things bullet-proof

Yes, yes they can! Maybe not 100% "bullet proof", but certainly
"bullet resistant". They choose not to because of the increased cost,
on the risk that the interference potential only exists in small
isolated cases. But by adopting this attitude, they have effectively
transferred the responsibility and the "bad press" for RFI incidents
to the innocent radio operator.

> and there will always be some vulnerabilities. So they have
>to limit those vulnerabilities to what can be expected in normal, everyday use
>by the vast majority of people. Close exposure to ham radio transmitters, I
>don't think, could be classified as normal, everyday use by the vast majority of
>people.

So hams are to be held hostage by cost centric manufacturers, and
gadget junkie neighbors?

>You have to draw some lines somewhere. There are what.... about 100,000 hams in
>the US? Out of more than 300,000,000 people? So is it unreasonable for people to
>expect that their modern appliances don't talk to them in the voice of the ham
>next door?
> Sure it is. Whose responsibility is it to make sure that doesn't
>happen? The manufacturers? No, because they make these products for the millions
>of people who pay for them, not the thousands of hams who interfere with them.

Sure, but the major accountability for this issue rests squarely on
the shoulders of the manufacturers. They have gambled that a
relatively small group of hams does not represent a significant risk
to their bottom line. By allowing or participating in bad press which
paints hams with the same broad brush as the keyclowns, in the RFI
arena, they are only furthering their own agenda. If they are
successful at fueling anti-radio sentiment among the general
population, which then results in restrictive legislation against
radio op's, these same manufacturers can avoid having to address their
role in the whole deal.

That's why the ARRL remains a strong voice in the ear of the FCC.
Someone has to keep the players honest. Otherwise radio hobbies (Ham
and CB alike) will be squished out of existence by a bunch of reality
show watching, game boy playing, phone-a-holics.

>It's up to the ham to make sure he doesn't piss off his neighbors. That's the
>bottom line.

Not if the cards are stacked against him.

>>>From a different perspective, and assuming you can prove that your signal is
>>>clean, have you ever thought of suggesting to the person that they return the
>>>merchandise as defective?
>>
>>Human nature is such that people become very defensive at the mere
>>suggestion that their equipment is to blame. And since this is

>>It's never a pretty sight.
>
>
>Well, human nature is such that hams become very definsive at the mere
>suggestion that the manufacturer of that equipment isn't the person transmitting
>RF into your neighbor's home.

Nonetheless, those same manufacturers are responsible for the
subjectability of those devices.

>And that person's right of individual choice was
>limited by the actions of the ham and nobody else.

Hams have rights too! Who respects those?

>>>Because it is. You are intruding into their homes. You take from them some of
>>>the comforts of everyday life that any reasonable person would expect to enjoy
>>>in the privacy of their own home.
>>
>>Ok, look at it this way, would you blame the weather for making your
>>house cold, if your front door was wide open? Maybe we should just
>>stop all cold weather? Afterall, that cold weather is "intruding" into
>>someone's home. Why should a homeowner take steps to block these
>>intrusions? They should be eliminated at the source.
>
>
>Cold weather is a normal fact of life that everyone expects to happen and
>therefore prepares for. Home intrusions by weather or anything else has a high
>probablity of occuring if there is no door. OTOH, most people will live their
>entire lives without ever witnessing a case of RFI.

Not if they live in a major metro area loaded with keyclowns, trying
to be "world-wide"......

> So why should everyone have
>to "buy a door"? It is just plain unreasonable to expect 300 million people to
>spend their time and money to protect themselves from the occasional ham radio
>operator.

But it would be the responsible thing to do, because it could happen.

It might be ham radio today, it could be BPL tomorrow. When your front
door is open to all weather, you never know what might come in.

That's the basis of personal responsibility. When you live in a multi-faceted society, you can be assured that freedom gives people the right to pursue a variety of pass time activities. It is also a certainty that there will be certain people who will take offense at the activities of other people. Now there are those who believe that people should be forced to not do their "offensive" activities (based, of course, on their own opinionated criteria, of what should be considered "proper"), while there are others who believe that those who are offended should take the steps to remove the offense from their senses. Obviously neither case should be 100% the rule. Some activities are generally more offensive to the general population, and are regulated (Like porn). Other things (Rap music for example) is a matter of taste, and if you don't like it, too bad, move somewhere else.

Where it becomes interesting is when both sides attempt to make judgement calls about the relative worthiness of the others' respective activities. When you are faced with purely subjective judgement criteria, who is qualified to make that call?

I guess it all boils down to where your mind is. If you believe that it's society's responsibility to protect us from each other, then you might be more inclined to buy into the "ham has the ultimate responsibility for RFI" mindset. If, on the other hand, you believe that we all have a responsibility to protect our own interests, then you would be more inclined to allow everyone to enjoy their activities (In as much as they don't directly threaten health safety or welfare), and take whatever measures need to be taken on a case by case basis.

>The world does not revolve around ham radio.

Nor does it revolve around the last 4 episodes of "Friends".

>>That's basically the position you are taking.
>>
>>>It's a nuisance like any other nuisance,
>>>except that it's a nuisance which is protected by a federal law.
>>
>>Being told to give up an important hobby and passtime, is a "nuisance"
>>as well. It all depends on your perspective.
>
>
>How about the FCC telling people that they must either give up the use of their
>TV, cordless phone, and whatever electronic gadgets they use, or pay gobs of
>money to get the house under an RF condom, just because some ham moved in next
>door and wants to play with his radio? That's not a nuisance?

Thems the breaks of living in "widget world". Remember Part 15.....

And what if the ham was there first?

And what if the "nuisance" interference is coming from a commercial radio or TV station (The ultimate irony). Should that commercial station be forced to curtail operation because they are causing a

"nuisance"?

>Is there something I'm missing here? Are hams some sort of superior race that
>the rest of the world must crawl in their presence? What right do hams think
>they have to take away the rights of others for the sake of a hobby?

What right do certain others have to take away a ham's right of
advancing or enjoying the radio art, over that of inane sit-coms? See,
you are making a value judgement. Hopefully, by me turning it around,
you can see that.

> Am I theonly person that can see the arrogance of that kind of attitude?

Arrogance, or simply a matter of standing up for our rights?

>The original post was copied from a Yahoo group.

That is from Aspen Publishers who have nice, expensive, and (in this case) questionable accuracy. They have very expensive tele-communications law reports and text books. The above link is from their Telecommunications Reports section.

The last paragraph of the Reports item mentioned is incorrect. There is a 30-day from FR publishing for COMMENTS; there is a 45-day from FR publishing for REPLIES TO COMMENTS.

ALL of the Comments and Replies to Comments on a docket are indicated on the FCC ECFS. That's free. No one has to pay thousands of dollars to subscribe to some publisher's "reports" to get information.

As of Noon EST on 18 Mar 04, there were still only 24 Comments on Docket 04-37, the first Comment filed on 19 Feb 04. There are still only 5 Comments on Docket 04-29. Hardly any "flood" of input from "enthusiasts coming out swinging" on anything. The Public Notice about the Access BPL NPRM has been in public view since 12 Feb 04, a bit over a month ago.

Can you find a Yahoo or any other place that explains the use of TWO docket numbers for the SAME NPRM?

"Quote" from WHAT?

The link published by Bill Sohl in here is to Amateur Radio Newsline's
"new" items. Going there will get anyone a very nice copy of the
original NECVEC petition RM-10787 submitted on 29 Jul 03!

RM-10787 is toast just like all the other 13 RMs. The last comment
filed on RM-10787 was 4 November 2003.

WHERE is this "new" petition proposal from NECVEC?

It isn't on the NCI website. It doesn't show up on a Search of Amateur
Radio Newsline's website. It doesn't show up on the W5YI Organization
website.

Is it on the ARRL website? If so, provide the LINK for it.

Are you talking about the ARRL "new proposal?" That "new proposal"
doesn't show up on any FCC Public Notices page for the morning of
18 Mar 04 ["Consumers & Governmental Affairs Bureau Reference
Information Center Petitions For Rulemaking Filed"].

Is there an RM number for the "new" ARRL proposal? If there is, tell
us, don't let us accuse you of quoting from vaporware.

ALL of these "new" petitions are nothing but vaporware until it shows
up at the FCC for public viewing with an assigned RM number.

You HAVE the Federal Register to "prove" that, do you?

Yesterday, 17 March, there were already 29 comments on the ECFS.

>Some of us are already working on comments.

Mostly for the newsgroup? :-)

>Such serious stuff should not be rushed, though, and need >to be thoroughly proofread and spellchecked.

Oh my, Miccolis was one the early birds on 03-104. Did he "thoroughly proofread and spellcheck" his comment on the

NOI?

>And the comments need to go two
>places since two sets of regs are changing.

WHICH "two sets of regs?"

The NPRM 04-29 specifically states Part 15 of Title 47 C.F.R.

It concerns incidental radiation, the only thing the FCC can
regulate (with the possible exception of a power line crossing
state boundaries with Access BPL serving more than one state).

WHICH docket is the "correct" one, mighty seer?

>ARRL has been beating this drum from the first.

From the "first" what?

Nobody so far has "beat" the National Antenna Consortium and
The Amhearst Alliance on NPRM 04-29 with a 19 Feb 04 filing!
:-)

As of 17 Mar 04, there were 5,731 documents in the ECFS on
NOI 03-104. Did the ARRL file all of those? A "large part" of
those? Are they the "only one" with any sort of "technical
dissertation" about Access BPL and incidental radiation?

>Full details at
>
>http://www.arrl.org

NOT EVEN CLOSE TO "FULL DETAILS!"

ARRL is still mentioning NOI 03-104 as if it were a current docket.
Why? It is toast. That NOI is just a digital wastebasket for citizens
getting their complain jollies over with...so they will learn to accept
Access BPL as a given in the future and not complain then.

ARRL can't even (yet) explain why there are TWO dockets on ONE
NPRM. [04-37 and 04-29 for NPRM 04-29]

ARRL hasn't (yet) posted any deadline date on filing for Access
BPL. Why not? Isn't that "important" or something?

LHA / WMD

Step one: get access. Step two: Either replace them with PVC gutters, or run a
bare copper wire in the bottom of the aluminum gutters.

A few questions on electrical safety on the test should solve the
problem that the
final voltage restriction is trying to address. How would you enforce
it anyway?
The frequency of your carrier is easily enforced (by someone tuning a
receiver
at a remote FCC field office), power level less so, and the B+ on the finals
can't be except by a visit from the FCC. They don't have the budget for
that.

Agreed. I have never been in favor of unenforceable rules.

Can anyone come up with a good rationale for not teaching RF safety in
some depth at the lowest level of license class? Are these newbies worth
less to us?

I might have to look this up, but IIRC, the 97% point is something like 9
wavelengths for the E-field and 5 wavelengths for the M-field.... or is it the
other way around.....

97.307(d) "The mean power of any spurious emission from a station
transmitter or external RF power amplifier transmitting on a frequency
below 30 MHz must not exceed 50 mW and must be at least 40 dB below the
mean power of the fundamental emission......"

There are also changes in Part 2 for the manufacturing standards of ham equipment.

>>I set aside a day or two each month to make 'trinkets', for lack of a better
>>term. Things like pigtails, toroidal chokes, jumper leads, mic cables, etc.

I work at a radio station where we have lots of audio and radio equipment, computers and networking hardware, telephones and routing system, our own backup generator, and keyclowns driving up and down the street. It is not a typical "consumer" environment.

>>..... My point is that radio operation requires a level of

>facilitating the easy reception of RFI.

Where does this "burden" lie? The consumers outnumber the hams 3000 to 1. When it comes to RFI and manufacturing quality, there are much higher priorities. Such as interference to and/or from cell phones, public utility and emergency communications, land-line telephone, television services including cable, satellite and broadcast, broadcast radio services, etc... all of which are far more common and far more important than hams. But they also have to deal with government safety agencies, insurance companies, manufacturing costs (labor is a biggie and that's why so many jobs are exported overseas), consumer demand, market competition, etc..... You are talking about changing the practices of multi-BILLION dollar markets just so a relatively few hams can play with their radios? I don't think so, Dave. That's an unjustified burden. When there are a couple million hams paying hundreds of thousands of dollars each for their equipment, then -maybe- hams might make those manufacturers take notice. But until that happens, the rest of the world sure as hell isn't going to shoulder the 'burdens' of a few hams.

>I remember the earlier days of ham radio. If a ham interfered with a

When I find a well-documented study on the issue I may agree. Until then my opinion is based on logic.

>>>>The other person is doing nothing to interfere with the ham.
>
>I would consider incessant complaints to be a form of "interference".

Cause and effect. Your interference is the cause, the complaints are the effect. Think of it as "constructive feedback".

>>>>It should be up to the ham to use his radio in a way that doesn't cause problems
>>>>for anyone else.
>
>That's like saying that everyone should drive their cars as to not
>emit pollution.

You are missing the big picture here. Cars are common. Televisions are common. Cordless phones are common. People expect these things to work in the manner in which they were intended, and accept the problems they are expected to cause. Ham radio stations are -not- common. Ham radio interference is -not- what people expect to deal with when they come home from a hard days work, pop open a brew, kick back in their comfy-chair and turn on the tube to watch the news. I don't see how any ham should expect the average person to accept such interference even if it -is- the law.

And legally, if a ham knows he is interfering with a radio or television signal, or even a cordless phone, it is the HAM who is at fault....

97.101(d) "No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal."

Notice that it doesn't exempt Part 15 devices or Sony televisions, it doesn't release the ham of responsibility just because he tried and failed to prevent the interference, and it doesn't specify where or how that interference occurs. The fact is that if you know your transmission is interfering with the audio, distorting the picture (distortion = interference, Blackburn v. Doubleday Broadcasting Co., Minn. 1984), or crashing someone's wireless palm-pilot, only YOU are at fault. Sony is not responsible for your transmissions and subsequent interference, nor is Zenith, Motorola, or even the poor schmuck who paid too much for an El Cheapo TV that even picks up his coffee maker.... if you know that you are causing interference, you are legally responsible. Period. But you knew that already, right?

>>So the interfering ham should just brush off the neighbor and transmit anytime
>>he wants just because he can? That's not very fair, is it?
>
>The converse to that is that the ham should transmit at all?

Well, how about using a frequency, band or modulation mode that doesn't cause any interference? Or maybe move the antenna so as to point the null at the problem device? Or if you have a vertical, how about setting up a null zone with another pole? I don't see any reason why it can't be done. The same laws of physics apply to both amateur and broadcast, and since broadcast stations can do it, so can hams.

>>But looking at it from the other person's point of view
>>helps a lot. For example, people have a reasonable expectation that things they
>>own and use should work they way they were intended.
>

>>don't think, could be classified as normal, everyday use by the vast majority of
>>people.
>
>So hams are to be held hostage by cost centric manufacturers, and
>gadget junkie neighbors?

Held hostage? Don't you think that's a bit strong? I mean... geez, nobody is
preventing you from using your radio, and you can certainly use it in a way that
doesn't interfere with the lives of people that otherwise wouldn't even be aware
of your existence. How is that being "held hostage"?

>>You have to draw some lines somewhere. There are what.... about 100,000 hams in
>>the US? Out of more than 300,000,000 people? So is it unreasonable for people to
>>expect that their modern appliances don't talk to them in the voice of the ham

It only takes a very tiny bit of encouragement to get them to take the test if their interest is more than just a "that's kind of interesting" level.

The biggest problem remains the fact that so few people have heard of amateur radio. Today we are at the point where there are even people who haven't even heard of CB.

From the actual NCVEC restructuring petition, Len. I downloaded it yesterday
and read it. Didn't you?
>
> The link published by Bill Sohl in here is to Amateur Radio Newsline's
> "new" items. Going there will get anyone a very nice copy of the
> original NECVEC petition RM-10787 submitted on 29 Jul 03!

Both published links were in error. That was obvious from the first page of the
petition. Didn't you notice that it wasn't a new petition, and that it did not
match the news release?
>
> RM-10787 is toast just like all the other 13 RMs. The last comment
> filed on RM-10787 was 4 November 2003.

They're not "toast", Len. Obviously, FCC is still gathering input for an NPRM.
>
> WHERE is this "new" petition proposal from NECVEC?

Len, it's "NCVEC". Only one "E".

The new NCVEC petition is online and can be downloaded easily, once you know
where to look.

> It isn't on the NCI website.

It's not an NCI petition.

> It doesn't show up on a Search of Amateur
> Radio Newsline's website.

It's not a Newsline petition either.

> It doesn't show up on the W5YI Organization
> website.

It's not a W5YI Organization petition, although you can bet your bippy that
every single word of the NCVEC petition had to be personally approved by ol'
Fast Freddie.

>
> Is it on the ARRL website?

I don't know. That's not where I got it.

> If so, provide the LINK for it.

Is that an order, Len? Sounds like one. Who are you to give me or anyone else here orders?

Why should I help you find the new NCVEC petition, Len, given the way you behave here? Will you act in a civil manner towards me if I help you? Or will I simply be the target of more of your name calling, ridicule, bad jokes, and other abuse?

> Are you talking about the ARRL "new proposal?"

No.

I am referring to, and quoting, the new NCVEC proposal. The one mentioned in the news release. Don't you have a copy yet, Len? If not, why are you commenting on something you haven't read?

> That "new proposal"
> doesn't show up on any FCC Public Notices page for the morning of
> 18 Mar 04 ["Consumers & Governmental Affairs Bureau Reference
> Information Center Petitions For Rulemaking Filed"].

That's not where I found it.
>
> Is there an RM number for the "new" ARRL proposal?

I'm not talking about the ARRL proposal. I'm talking about the new NCVEC proposal.

> If there is, tell
> us, don't let us accuse you of quoting from vaporware.

Is that an order? Who are you to give me or anyone else here orders?

I'm quoting from the new NCVEC petition. It's online, available for download. Took me about 2 minutes to find it, once I realized that the links posted were to the old NCVEC petition, not the new one.
>
> ALL of these "new" petitions are nothing but vaporware until it shows
> up at the FCC for public viewing with an assigned RM number.
>
Then what's your problem, Len? If it's not a real petition, why are you all worked up about it?

Here's a hint: It's a real petition, not vaporware. It can be downloaded from an easily accessed site. I even printed it out this morning.

Say Hi to Dick/W0EX.

I think the New Madrid Fault was the only thing that kept him going.

I have, and are you talking about something else? I took NECVEC to be a typo, since NCVEC is a group that put forth a proposal some time ago. Perhaps you are referring to a different group?

At any rate, No need to modify my argument if you are referring to the NCVEC and not the NECVEC.

> Amateur Radio as a stop-gap.
>
> Can you/do you refute this?

Yes, I can.

Quoting Lean:

"Alun, according to the Census Bureau's data as of 2003, there are 100
million cellular telephone subscriptions in the USA. That's about one
for every three citizens. Rather large "spread," I'd say. :-)

"If every licensed amateur in the USA had one useable radio, then the
number of amateur radios would be one per about 430 citizens. Not as
big a "spread.

LHA / WMD"

I'll add that there are about 265 million people in the US, and less
than 700,000 licensed amateurs, who TAFKARJ will tell you some are
dead, some have quit, some are expired, and many are inactive.
Regardless of how many are alive and active, half don't use CW/Morse,
so according to you overplayed and unrealistic disaster scenarios,

they are useless. Right?

Now, not every American Citizen has access to an amateur radio
operator. I'd say most don't know even one amateur, and many don't
know what ham radio is (Isn't that like CB?)

I would hazard a quess that the average American Citizen DOES know
someone with a cell phone. Cell phones are almost ubiquitous, so much
so that they are annoyances. 100 million subscriptions, 265 million
people. You do the math.

> > > What I HAVE stated in this and other forums is that Amateur Radio

> Oh...?!?! How?

Because if there were 100 million amateur licensees in America like
there are 100 million cellular telephone subscriptions, our bands
would be overloaded and useless.

CAN YOU HEAR ME NOW???

> (this guy IS an idiot...Hope I get to see him at Dayton and tell
> him to his face...)

I'd rather not meet you in person. You scare me.

So stay away from me.

> >
> > Just did.
>
> No, you've not. You have made a foolish assertion that is NOT
> supported by a shred of evidence.

Yes, I did. You only have one scenario in your head. That scenario
is that cell phones won't work in an emergency.

> > > I have NEVER said anything even CLOSE to the idea that we're the
> > > only game in town. Quite the contrary.
> >
> > You omit any discussion that any other radio service or common carrier

> Amateur Radio.

Your emergency plan scenario that you are acting out this weekend is
that cell phones won't be working.

Am I wrong?

> > > I >>HAVE<< said we provide a service to those who make the plans
> > > and need the help.
> >
> > Until the emergency happens, you don't know who your customer might be
> > or if you can provide a service to him or her.
>
> Ahhhh...but I do...
>
> You see, Mr Clueless, there are things called "MOU's", or
> "Memorandum of Understanding", that exist between agencies for just
> these instances.

You have no MOU with me. You have no MOU with Larry. You have no MOU
with Lean.

Will you deny emergency comms to us if we needed them?

> Those of us who are actually involved in these types of activities
> prepare in advance for these issues. It's called "TRAINING".

You trained for the Twin Towers attack?

Did your exercise scenario shut down the cell system?

Or did it actually work as actual 9/11 survivors said it worked?

> Is it possible to train or prepare for ALL eventualities...?!?!
> Of course not, but short of The Rapture or complete nuclear
> annihilation, I'd say most responding agencies have SOME plan in
> place.

> ARES has MOU's with nearly every state EMA in the Union. That
> pretty well puts them in a positon to be able to train with just about
> everyone they will need to be in touch with during any given
> emergency.

Most American Citizens are not responding agencies, don't have MOUs,
aren't amateur radio operators.

What do they use?

Cell Phones.

> > Unless your emergencies are always predictable, in which case they are
> > not emergencies.

Nope. Lots of people used their cell phones. One even used his phone
to call home and leave a goodbye message to his wife on their
answereing machine.

He didn't use amateur radio or CW.

> > > > Did you say that cell sites don't have emergency backup generators?

Thus, military installations can work with their IMD to set up a BST
under MARS. Much better outcome than relying on people who CHOP
themselves to the ARC, Salvation Army, County EOC, CAP, Homeless
Shelter, Friends of the Library, and Bicycle Rodeos.

> When was the last time YOU were in an EOC as a functionary,

>> an easily accessed site. I even printed it out this morning.

So what do you think of the NCVEC petition in its entirety, Mike? Not the press release, the actual petition.

73 de Jim, N2EY

And note this: All of these petitions are simply delaying any new restructuring NPRM. We won't even see an NPRM until both the ARRL and NCVEC petitions get RM numbers and have comment periods.

And Hans hasn't done his proposal yet.

The ARRL estimate of two years looks like it was too soon!

Once that poor lady named Barbara who used to do Coast to Coast on weekends was stuck with Wayne for four hours. I listened for thirty minutes, my gorge slowly rising, as he spewed smelly chunk after chunk of typical Coast to Coast-type utterly baseless drivel, all delivered without supporting evidence or citation, and in tones of absolute authority, somewhat as if he Moses on the mount. Wayne Green, at least when he appears on Coast to Coast, is as full of off-the-wall theories and opinions as your local surly homeless man. No, I take that back. He's worse! The fact that he's made a lot of money in his life apparently means he's never been humbled enough to learn to apply even the slightest pinch of doubt to his own opinions. He's as sublimely sure of himself in his nonsense as a petty dictator to whom no-one has ever said "No."

And the network becomes useless in an emergency, that is why military and civil officials do not consider the cell network to be a viable means of communications in a major disaster, it isn't even in their emergency planning. Ham radio is. So next time there is a major disaster, have fun punching numbers into you little cell phone attempting to call twenty of your friends to warn them or tell them to, "turn on your tee-vee", and when you can't get through because of all the other cell users flooding the system doing the same, you can amuse yourself by playing a game on your phone which has now become nothing more than a game-boy.

For handling official emergency traffic they are not of any use, that is why the military and civil officials dismiss them completely from their emergency planning. They do include ham radio.

TAFKARJ, that's Mighty Bold of you to title the subject, "Wrong Again,
Len!" without quoting what you think TNAFKNAMPARRL got wrong. You
really gotta do a better job than that laying a foundation to entrap
TNAFKNAMPARRL.

I think he's got you rattled.

Advice: Get a Grip before you lose title of El Supremo Amateur de
RRAP.

While you compose yourself, give us a hint what TNAFKNAMPARRL said
that was so wrong (again).

> magazines than anyone in human history.
>
I think he's a kook when he's on the show, because I sure
have not heard him talk of radio, but actually kooky things.

But I don't think it's fair to categorize him as a "loser".

He may have turned CQ around when he was editor in the fifties,
and most definitely one cannot say it was a bad magazine when
he was editor. While he was there, the first practical parametric
amplifer wsa described, along with a practical selectible sideband
synchronous detector. He drew various well known people to the magazine,
Sam Harris and John W. Campbell to name two (I can't remember if Don Stoner
was already there when Wayne took over as editor), as article writers or
columnists.

He left, and started 73. How do you rate a failed magazine? It lasted
over forty years, which is a pretty good life for an independent magazine.
Yes, it decayed badly in it's last ten years, but for 25 years or so
it was a pretty good construction magazine.

He started Byte, and while he lost it within three issues, I don't think
anyone can argue its success. But of course, it only lasted about 20 years.

He started Kilobaud, and it only lasted about 7 or 8 years. But then,
a whole slew of computer magazines, a field that he pretty muchs tarted,
died off at the same time.

He started various magazines dedicated to specific computers, which also had a relatively limited run, but then, so did the computers they dealt with. They, and Kilobaud for that matter, I don't think generally failed under his watch, because he sold them off to IDG for a bundle.

He started a CD magazine, that maybe lasted ten years, but it was pretty successful for a while. I'm pretty sure he sold it off, again for a bundle, before it faded away.

Note that with a lot of his magazines that "failed", he was picking topics that were on a rising curve, where there was a need for specialized magazines because the topic was so new. They were a source of infortion, a place to find ads for related items, and a place for advertisers to reach the specialized field. As such things moved to the mainstream, they lost steam becuse one could find information elsewhere, and for that matter one needed the information maybe less because the topic was all over the place. Take the CD magazine; it arrived when CDs were relatively new and they could run a list of all CDs in each issue. You likely had to go out of your way to find CDs, and you needed help to decide which player to buy, since they were uncommon and quite expensive. Now, you can buy the players everywhere, and for under a hundred dollars, and you can find those CDs everywhere too.

Of course Wayne had some magazines that bombed really fast. But over the same span, plenty of magazines have come and gone. Wayne had the money, or gumption, to try magazines on new topics, and since he kept trying, he was bound to fail sometimes. Others would stop after one failure.

How many ham businesses did he ever start? Radio Kits in the sixties? A useful service for people who wanted to build what were in the magazines but apparently it was always a money loser. There was a time when he could publish books, because he had the press for 73. He stopped at some point, does that make it a failure? He sold code tapes for some years, and then that too faded away. Does that make it a failure?

Were there some I don't know about? I had suspicions about some advertising in 73 in the sixties, that happened to be in New Hampshire near 73. Was it Redline, that made converters? They didn't last too long, but plenty of such small businesses came and went, even without Wayne's help.

He had his hands in multiple fields, because the core magazine, 73, was successful enough that he could try other things. The computer magazines were successful, likely some of them had greater readership than 73 at any time in its history, and that meant he could try new things. When he sold them off, the cash meant he could still try new things.

Sure, there was a period when 73 was part of IDG, but that was fallout from selling the computer magazines. But basically, for over forty years he was an independent publisher. He never had to go to a regular job, never had to fallback on that when his projects failed. That has to make him successful.

Hardly any magazines over the same period were published by independents. Most were under big publishers. Independents had a tendency to fail.

Or, they'd be sold to the big publishers, and then had tendency to disappear. Gernsback himself started an awful lot of magazines, and most of them "failed" too, maybe faster than Wayne's. Gernsback, the publisher, failed last year, killing it's last remaining magazine, that basically hadn't had much of a life.

No, I think Wayne was pretty successful.

My apologies, most noble of high rank amateurdom.

A mere typo...and you vulture-wannabes are attracted as to carrion.

NEC = Numerical Electromagnetic Code (method of moments
computer calculation for EM fields)

NEC = National Electrical Code (for electric power distribution)

NC = No Comment...the left hand middle finger trembled on the E
key as I laughed in trying to suppress The Finger sign?

>
>From the actual NCVEC restructuring petition, Len. I downloaded it yesterday >and read it. Didn't you?

There's only ONE "actual NCVEC petition," RM-10787.

Downloaded that one a long time ago...first of September 2003.

There's one OTHER proposal which has been tossed about under "Ham radio for the 21st Century" title. That's been out for a while too and I've had that in the download folder. It is NOT in any FCC Notice as any "RM" (petition for Rule Making).

>> The link published by Bill Sohl in here is to Amateur Radio Newsline's >> "new" items. Going there will get anyone a very nice copy of the >> original NECVEC petition RM-10787 submitted on 29 Jul 03!
>
>Both published links were in error. That was obvious from the first page of the >petition. Didn't you notice that it wasn't a new petition, and that it did not >match the news release?

I noticed the exact similarity of the posted link download after viewing it, that's why I commented.

I don't eagerly view each and every download as it comes in. I just use "save as" to download PDFs and DOCs in the background while

I surf elsewhere.

Was I supposed to check in with you first or what?

>> RM-10787 is toast just like all the other 13 RMs. The last comment
>> filed on RM-10787 was 4 November 2003.
>
>They're not "toast", Len. Obviously, FCC is still gathering input for an
>NPRM.

Obviously NOT. The LAST comment on RM-10787 was made over
four months ago.

The ECFS files on NPRM 98-143 are still available to the public. Are
you saying the FCC is also "still gathering input" on that?!?

News flash: R&O 99-412 happened at the end of 1999. NPRM 98-143
was no longer under consideration for anything except checking on
the complaints of a few.

>> WHERE is this "new" petition proposal from NECVEC?
>
>Len, it's "NCVEC". Only one "E".

Oh my! Fuss and furor going to be raised on a simple typo... :-)

I can hear your strident messaging even now..."error!"..."mistake!"
"not worthy of consideration!" :-) :-)

>The new NCVEC petition is online and can be downloaded easily, once you know
>where to look.

The FCC doesn't seem to have it available for the public.

Where is it?

>> It isn't on the NCI website.
>
>It's not an NCI petition.

Bill Sohl is with NCI and he is the one posting links in here.

>> It doesn't show up on a Search of Amateur
>> Radio Newsline's website.
>
>It's not a Newsline petition either.

Never said it was. Newsline has made other petitions, have they?

>> It doesn't show up on the W5YI Organization
>> website.
>
>It's not a W5YI Organization petition, although you can bet your bippy that
>every single word of the NCVEC petition had to be personally approved by ol'
>Fast Freddie.

Is Fred Maia still on the NCVEC? Answer Yes or No.

>> Is it on the ARRL website?
>
>I don't know. That's not where I got it.

I think you "got it" all in your head...

>> If so, provide the LINK for it.
>
>Is that an order, Len? Sounds like one. Who are you to give me or anyone else
>here orders?

Poor baby. Getting all upset are you?

"Nobody can give YOU orders!" Not of any kind, shape, or form! :-)

No problem. When the REAL petition shows up as an RM,
then it is worth looking at.

>Or will I simply be the target of more of your name calling, ridicule, bad
>jokes, and other abuse?

OH! You've been ABUSED have you?!? Poor baby...!

Tsk, tsk, tsk, all you of the self-perceived nobility are the same.
It must be all that blue blood, royal cynaosis not letting enough
oxygen into your emotion centers!

>Here's a hint: It's a real petition, not vaporware. It can be downloaded from
>an easily accessed site. I even printed it out this morning.

"Real petitions," yer lardship, are on the FCC site.

Sorry to not bow and scrape to your most esteemed worthiness,
but if you ever got down from your high horse, you might be
tolerable to other civilized humans.

Don't get off...yer horse piddled on da ground, 'e did...ya'll step
in it an' get yer booties all wet...

et472@FreeNet.Carleton.CA (Michael Black) wrote:

> No, I think Wayne was pretty successful.

I'd have to agree. Back in the late '70s (long before the IBM PC) Green published "80-Micro" devoted to the Radio Shack TRS-80 (of which I owned three or four, various models). It was a thick, hefty magazine with tempting ads for expensive things like a 5-MB hard drive. Every issue carried many program listings in Basic, or hex code which could be laboriously keyboarded to produce an .exe file. I typed in most of them, learning how to program in the process (and I'm sure MANY current old programmers started out the same way), and eventually sold a few of my own new programs to Wayne for publication.

Wayne was a pioneer, and the TRS-80 was the first "serious" (even with only 16K ram) computer most of us saw... it had a 64-column screen fine for word processing, compared to only 40 or so on the Apple. The early TRS-80 had a very bouncy keyboard, and I had a real epiphany about the power of software when Wayne's magazine published a little software patch... I keyed it in and the bounce went away for good.

I've never heard him on the radio and thus can't comment on whether his current ideas are wacky or not, but his many contributions to ham radio and home computing are indisputable.

Back on topic: once I even programmed a controller for my NRD-525 in compiled basic with full dual VFOs and could control everything on the receiver but the volume. Without Wayne, I might never have taught myself how to do that :^)

WHAT??! This is ridiculous. I haven't been following this topic area
at all recently, I don't much care about it one way or another. But
having stopped to take a quick look at this thread you got my
curiosity up and running so I went out and dredged up the NCVEC
petition via the usual trick. Cold start to the whole thing in it's
original .doc format up onscreen ready to print out in maybe 60
seconds. If that.

He's off his meds again or he hasn't wiped his eyglasses for a couple
months.

Right, Mama Dee, that's "exactly" what happened after the second hijacked airliner crashed into the WTC towers, didn't it?

Right...just like the Loma Prieta and Northridge earthquakes when the government ordered every radio thing be all ham emergency...

Right...just like all the southwest and northwest firestorms had every radio commandeered for emergency use.

Right...just like every hurricane striking the east coast has all radios off limits by Order.

Right...except the broadcast people, the news people, the Public Safety Radio Services people, the utility radio (PLMRS) people, the activated National Guards people, FEMA, etc., etc., etc. were all using their radios as they usually would WITHOUT any nasty gubmint orders.

I am saddened that your local telephone infrastructure has such poor service wherever you live. However, here in the sunny Greater Los Angeles area the telephone infrastructure was quite normal after the first two hours of the Northridge quake. That was ten years ago, of course, and the cell phones weren't as many but neither were there as many cell sites. It all evened out.

But, in your scenario of the mind, "all cell sites fall down during emergencies" and only ham radio can save everyone. In real life they sure didn't. Don't let that trouble you. We are all children to you.

>big a "spread.
>
>LHA / WMD"
>

>I'll add that there are about 265 million people in the US, and less
>than 700,000 licensed amateurs, who TAFKARJ will tell you some are
>dead, some have quit, some are expired, and many are inactive.
>Regardless of how many are alive and active, half don't use CW/Morse,
>so according to you overplayed and unrealistic disaster scenarios,
>they are useless. Right?
>
>Now, not every American Citizen has access to an amateur radio
>operator. I'd say most don't know even one amateur, and many don't
>know what ham radio is (Isn't that like CB?)

Mama Dee claims there are some Americans who don't even
know what a "CB" is!

TAFKARJ claims that "CB" originated in 1946...except that
"11 meters" is not at 465 MHz. :-)

ARRL ought to get Broose out there telling Americans about
"CB." :-)

>I would hazard a quess that the average American Citizen DOES know
>someone with a cell phone. Cell phones are almost ubiquitous, so much
>so that they are annoyances. 100 million subscriptions, 265 million
>people. You do the math.

The gunnery nurse has a maximum count base of 20. :-)

>> > > What I HAVE stated in this and other forums is that Amateur Radio

Hey, Brian, yon gunnery nurse are gonna play Let's Pretend with
a "simulated" earthquake. They will shake in their boots to make
like the earth moved for them. Maybe they will have a "hostile
action" too and award pretty decorations for all of that. High fives
all around (simulated, of course).

I can't wait for the documentary movie of the event to be shown on
the History Channel.

Gernsback and Green have/had two things in common.
Both sold cleverly veiled bullshit which was *dressed up*
as valid future science to geeks, nerds and fools. Modern day
PT Barnum's who wrap their circus act in 5-point colored
paper. Noorey and Bell do the same thing by giving them
and their ilk an occasional microphone today. If they
were not in print media or broadcasting, they all most certanly
would be selling pre-owned automobiles someplace, or perhaps
partners with shady local politicians.

Hey Billy Clueless...

Guess who's in charge if inland disaster response in the United States?

(1) The local and state agencies of the affected state, then:

(2) FEMA, then:

(3) The United States Army.

So...ya think that General's ONLY cnvern is calling in a fire mission with
those radios, Brain?!?!

You laid claim to having been a MARS BST member...were the ONLY
"comms" that you supported tactical or strategic military traffic...?!?!

(Refore you answer, REMEMBER that I was also a member of USAFMARS and am
VERY familiar with MARS programs and policies...then AND now...)

>He also works with The Office
>> of Homeland Defense on emergengy communications issues and he confirmed
>> that the OHD is attempting to intergrate Amateur Radio in their plans
>> for emergency comms.
>
>As they should; the military has backups to backups. Redundancy
>equals Survivability.

From the Prince of the Putz who keeps arguning AGAINST the concept of
Amateur Radio AS a redundent communications program, this is funny!

This is the VERY thing most of "us" have ben arguing, but you keep trying
to denounce as false!

>Now lets talk about Average Citizen (AC). AC has actually used
>cellular telephones IN the 9/11 emergency. Many ACs had successful
>communications. AC has greater access to the cellular telephone
>system than they have to amateur radio. For many ACs, cellular is
>their emergency comms.
>
>Do you doubt it?

For sending the police to an accident, fire, or medical emergency, yes,
this is "AC's" "emergency comms".

But you are arguing apples and oranges. The "emergency comms" being
argued here is NOT the average citizen's call for "routine" 9-1-1 service. Not
by a magnitude.

Nice try to skew the numbers, Brain.

Was it necessary?

> Right...just like the Loma Prieta and Northridge earthquakes when
> the government ordered every radio thing be all ham emergency...

Nope...but they did declare a communicaitons emergency and certain
discreet HF frequencies WERE made hands-off to "routine" Amateur use...Just
likes dozens of other times they've done so for other like incidents.

> Right...just like all the southwest and northwest firestorms had
> every radio commandeered for emergency use.

Nice try at scare tactics...Except the only thing "scary" here is that
people like you are allowed to procreate without control.

> Right...just like every hurricane striking the east coast has all radios
> off limits by Order.

"Every"...?!?!

Certainly not.

Does the FCC order "communications emergencies" based upon these events?
They certainly do.

> Right...except the broadcast people, the news people, the Public
> Safety Radio Services people, the utility radio (PLMRS) people,
> the activated National Guards people, FEMA, etc., etc., etc. were
> all using their radios as they usually would WITHOUT any nasty
> gubmint orders.

And used them well.

But NOT for the types of communications that were supported by Amateur Radio...that's the PURPOSE of Amateur Radio...to relieve those other services of having to worry about that.

> I am saddened that your local telephone infrastructure has such
> poor service wherever you live. However, here in the sunny

> but neither were there as many cell sites. It all evened out.

Good for them. The incident was in a localized area, and I'd be very dissappointed if the local utilities COULDN'T make this "fix" in a hurry.

But even MORE unfortuntate for YOU, Your Scumminess, is that YOU and YOU ALONE keep trying to use the Northridge Earthquake as some "evidence" that Amateur Radio is of no value in an emergency. That was ONE event in over 90 years of archived Amateur histroy.

I say unfortunate for you because YOU keep making these assinine assertions only to have one report after another of Amateur Radio's services being deployed in the very manner YOU say they aren't...

> But, in your scenario of the mind, "all cell sites fall down during
> emergencies" and only ham radio can save everyone. In real
> life they sure didn't. Don't let that trouble you. We are all
> children to you.

In real life, Lennie, NO ONE has made such an assinine assertion...

Only you in "support" of your rants.

I know two "Len Anderson"'s here in SE Tennessee...

Thankfully, both of them are responsible, thoughtful men of reputable
character.

Unlike the "Len Anderson" who posts to RRAP.

>million cellular telephone subscriptions in the USA. That's about one
>for every three citizens. Rather large "spread," I'd say.

This is no proof, Brain.

SHOW ME where those UNLICENSED SERVICES are USED in playing a MAJOR ROLE
(your choice of adjectives) in "emergency comms".

>> Brain, WHY do you insist on making assertions that ANYONE who
>> might care to research can find out are so blatantly false?
>>
>> Do you ENJOY being proven a liar?
>
>Why do you leave out other forms of cummunications???

I haven't.

We have been discussing AMATEUR RADIO'S role in emergency communications,
since this IS a forum for Amateur Radio.

Nonetheless those other servies get thier mention as the conversation
leans that way.

YOU have NOT answered TWO questions:

What "major role" have unlicensed services played in "emergency comms",

And..."Do you ENJOY being proven a liar".

>> > You're simply wrong on that one. Amateur radio does not offer the
>> > flexibility and utility that cellular telephones provide.
>>
>> Oh...?!?! How?
>
>Because if there were 100 million amateur licensees in America like
>there are 100 million cellular telephone subscriptions, our bands
>would be overloaded and useless.
>
>CAN YOU HEAR ME NOW???

There is no way that 100 million cellphones could occupy the
infrastructure at the same time.

As for those 100 million people being on the air at the same time, WHO
NEEDS THEM?

It has already been proven that a small number of well trained people can
do a job far more efficeintly and effectively than 10 times thier number of
UNtrained people.

>> (this guy IS an idiot...Hope I get to see him at Dayton and tell
>> him to his face...)
>
>I'd rather not meet you in person. You scare me.

I should. I expose the true nature of your character, and that's just
from unravelling your poorly prepared rants in this forum. I can imagine what
a fool I could make of you in a TRUE public forum.

>So stay away from me.

I imagine that will be no problem...If your in-person stench approximates
your on-line nature, I will have plenty of time to change my direction of
travel.

Of course you could find something else to do this May. Judging from the character of your posts here, Witless Willy, I imagine you have little tolerence for licensed Amateur Radio operators anyway.

>> When the cellsite is down, unaccessable, or overloaded, HOW do you
>> communicate with your cellphone?
>
>When your ham radio is broke, how do you communicate with it?

I don't. But I CAN open the box, fix the problem, and continue with what I was doing.

And if that's impractical, I switch radios.

>> > Challenges, challenges, challenges! That's a part of your problem,
>> > Don Quixoterobeson. Always making challenges.
>>
>> So far, Putz, you've not been up to ANY challenge. (no cajones)
>
>Is that a threat?

Only "threat(ening)" to your ego, Brain.

I said you don't have the cajones to honestly answer quetions put to you.

Your "response" is to NOT answer the question, and then insinuate my assertion of your lack of 'nads" is somehow a threat.

>>> When the repeater is down, I can switch to simplex...When the
>> propagation is bad, I can switch bands...If FM is inappropriate, I can
>> switch to a data mode or SSB.
>>
>> So far, Brain, you've not proved anything except your

>
>I said your radio is broke. Switch away for all the good it does you.

And >>I<< said if it breaks, I'll fix it. Amateurs (well...at least SOME of us...) know how to do that.

>> > > Please DISPROVE >>ANYTHING<< I have said about Amateur Radio's
>> > > role.
>> >
>> > Just did.
>>
>> No, you've not. You have made a foolish assertion that is NOT
>> supported by a shred of evidence.
>
>Yes, I did. You only have one scenario in your head. That scenario
>is that cell phones won't work in an emergency.

That's the scenario YOU have. I've cired many others. You simply keep trying to come back to only one that you think you can legitimately argue.

>> First of all I have not "ommited" anything. I have discussed
>> other services on many occassions...It happens THIS is a forum on
>> Amateur Radio.
>
>Your emergency plan scenario that you are acting out this weekend is
>that cell phones won't be working.

Among others...That is only one part of a very large plan.

And can YOU tell ME that if a major earthquake occured that those services
would, without question, remain in service?

>Am I wrong?

Usually, yes.

>Will you deny emergency comms to us if we needed them?

Of course.

>> Those of us who are actually involved in these types of activities
>> prepare in advance for these issues. It's called "TRAINING".
>
>You trained for the Twin Towers attack?

We've trained for a loss of commercial telephone service, regardless of
how it occurs, Brain.

>Did your exercise scenario shut down the cell system?

Yep.

>Or did it actually work as actual 9/11 survivors said it worked?

"...actual 9/11 survivors" used their phones prior to the towers falling.

>Most American Citizens are not responding agencies, don't have MOUs,
>aren't amateur radio operators.
>
>What do they use?
>
>Cell Phones.

Please tell me, Brain, what SERVICE to all those cellphone carrying
citizens perform?

They are only calling for thier own needs.

Again, you try to argue the needs of the one as opposed to the meads of the
many.

>> > Unless your emergencies are always predictable, in which case they are
>> > not emergencies.
>>
>> Sure they are.
>>

>
>You got me there. In all of the situations above, how will the
>average Joe communicate?

Communicate what? "HELP...THERE'S A TORNADOI!"

You try to meld "emergency communications" with "distress calls".

You need to learn the difference, Brain.

>> Put in the spot of being asked to validate his assertions, he
>> wants to play silly sandlot games. OK... That pretty well validates
>> my assessment of him....Brian Burke is a coward.
>
>Sounds like more challenges. You really want to get into it, don't
>you?

You're already "in it", Brain.

You deceive, you make allegations you can't/won't substantiate. You
humiliate yourself by claiming another person, known to be a pathological liar,
as your "mentor".

There's no "challenge" there. You said these things. I didn't have to
make this up.

>> Cellphones were nearly USELESS in the initial stages of the
>> attacks in NYC due to overload and loss of cell sites. This is
>> documented fact.
>
>Nope. Lots of people used their cell phones. One even used his phone

>>
>> Now...You made some silly assertions that I've asked you to
>> substantiate.
>>
>> You got the cajones to come up with valid answers, or are we to
>> be treated to more of your lame sandlot excuses...???

You completely quoted all of that, Brain, but didn't answer a single bit of it...even facetiously...

Ya did a GOOD JOB of validating my assumption of your lack of valid argument and lack of cajones to do so...

Remember, Brain...we're using YOUR adjectives of "MAJOR ROLE" in disaster and/or emergency communications.

So far, the only "role" you've been able to cite is Joe Average calling 9-1-1 to report an emergency. That is NOT "emergency comms".

I WANT TO KNOW what >>ROLE<< those unlicensed services play in disaster mitigation EMERGENCY COMMUNICATIONS....

Thanks.

I still challenge you, Sir Scummy of Anderson, to refute that any emergency response agencies in SoCal (or anywhere in the Schwartzennegger Empire) do NOT "train" (ie: SIMULATE) disaster scenarios.

> I can't wait for the documentary movie of the event to be shown on

>No, I think Wayne was pretty successful.

Wayne has had his "successes", for sure...

He succeeded in ruining "73" magazine.

He succeeded in making a mockery of himself.

He succeeded in spending a lifetime "dissing" the ARRL, yet everytime a rallying cry was sounded by those disenfranchised with the ARRL (most of whom WERE that way BECAUSE of him!) he had some lame excuse as to why he couldn't/wouldn't do it.

Needless to say, Michael, I disagee. Wayne had the opportunity to be a significant leader in Amateur Radio's future, but he will be, afterall, nothing but a footnote in it.

Mike,

There are two reasons for low power/limited privileges for the entry level license:

1) To simplify the tests needed for the entry-level license (if you can't run more than X watts, or are not allowed on a certain band, you don't need to be tested on it)

2) To give an incentive (challenge) to learn more and qualify for a higher class license. (If the entry-level license conveys all privileges, why bother to upgrade?)

The term "caste" isn't really accurate, though. "Caste" is something a person is born into and cannot escape, regardless of personal accomplishment. "Class" would be more accurate, because upward mobility is possible.

The limitations on homebrewing and final voltage proposed by NCVEC are unenforceable, pointless and would cut off Communicators from an important part of amateur radio for no justifiable reason.

>needed for parking the said automobiles. And guess where the money for
>these new roads comes from? Taxes. Sometimes, ya just have to pay
>*something*, I think.
>
All valid points, Mike.

Here are some more:

- increased pollution
- decreased transportation opportunities for those unable to drive for any
reason (the disabled, poor, underage, etc.)
- increased losses (life, injury, property damage) due to increased
road/highway traffic (the most dangerous form of transportation generally
used).

> There is a particulate emission problem for diesel engines, but I
>suspect that can be solved.

Fixable with improved technology. The overall pollution impact of a diesel is
less than that of a gasoline engine of equivalent horsepower-hours.

>Probably the biggest problem in the past was
>the lack of available fuel where we needed it. I don't think that is a
>problem anymore, and I suspect that if fuel prices continue edging
>upward, diesel may make a comeback.

I drove a diesel Rabbit from February 1980 to February 1997 and never, ever had
a problem finding fuel. The car had only a 10 gallon tank, and I rarely let it
get down below 1/4 full. That meant about 400 highway/300 city miles between
fillups, which cost $10 or so.

Sure, but I'm not even close to convinced that any tests need or should
be simplified. I wonder if anyone can provide evidence that the those
giving the tests are being overburdened?

> 2) To give an incentive (challenge) to learn more and qualify for a higher
> class license. (If the entry-level license conveys all privileges, why bother
> to upgrade?)

But my idea, or non-idea does just that, without punitive power
restrictions based on what I consider bogus rationale. For those that
are happy to just ve on VHF and above, the Technician ticket is just the
thing. Want HF access? Take the General test! Without Element one, there
isn't anything to hold ya back.

From what I see, simply removing Element 1 and letting the dust settle
is a better plan than either the NCVEC or ARRL plans.

> The term "caste" isn't really accurate, though. "Caste" is something a person

The term caste is used mainly for the class aspect, not based on the
religion aspect. Evil Extra's being reincarnated as CB'ers comes to
mind! ;^)

Cinergy plugs in as Web provider
Power lines set to carry Internet to outlet near you

By Mike Boyer
The Cincinnati Enquirer

A unit of Cinergy Corp. today will become the nation's first electric utility to offer high-
speed Internet service to customers via its power lines, turning every electrical outlet in homes or offices into a Web connection.

The technology, which will be offered first in Hyde Park and Mount Lookout, holds the promise
of adding competition and cutting prices for broadband services while making such service available (particularly in remote and rural areas) without costly investments in cables.

The Federal Communications Commission has been pushing the technology to bolster competition -
and thus spur more Americans, who are less likely than Japanese or South Korean consumers, to
have broadband access. FCC Chairman Michael Powell has said the technology like the kind Cinergy will use "could simply blow the doors off the provision of broadband."

Cinergy Broadband teamed with Current Communications Group, a Germantown, Md., technology company to test the service - known as broadband over power lines or BPL - in about 100 homes
in Hyde Park in the last year.

"Our pilot has been very successful, with more than 75 percent saying they would be willing to
subscribe to the service" said William Grealis, Cinergy executive vice president and president
of Cinergy Broadband.

Cinergy and Current have formed a 50-50 joint venture to roll out the service here under the
Current Communications name.

Current joins Cincinnati Bell's Zoomtown digital subscriber service and Time Warner Cable's
Road Runner service in marketing high-speed Internet in Cincinnati.

Cinergy thinks that BPL has a couple of advantages over competitors. It doesn't require a cable or phone line, and can be operated from anyplace where there's an electric wall outlet.
Upload and download speeds are the same, unlike DSL and cable modem service - whose upload speeds are slower than download speeds.

"We believe we have better speeds at competitive prices," Grealis said.

Cinergy and Current plan to offer several levels of service starting at 1 megabit a second at
$29.95 a month. Road Runner locally costs $44.95 a month for download speeds of up to 3 megabits; Cincinnati Bell's Zoomtown costs $41.95 a month for the same speed. They both offer
signup discounts.

Cinergy's service will be marketed initially to about 16,000 homes in the Hyde Park-Mount Lookout area.

In what he described as a "measured rollout," Grealis said the partners plan to make the service available to about 55,000 homes in a dozen communities in Hamilton County this year,
including Wyoming, Delhi Township, Terrace Park and Norwood. Early next year, it will expand
into Northern Kentucky.

The joint venture also plans to begin offering voice over the Internet telephone service to customers next fall. Prices for that service haven't been set.

Cinergy and privately held Current are forming another joint venture to market the technology
to municipally owned power companies nationally. Grealis said that's a potential market of 24
million homes.

Cinergy is also investing $10 million in Current Communications, as part of a new round of venture funding of more than $70 million, along with Current's other investors Liberty Associated Partners and EnerTech Capital LP. Cinergy Broadband is part of the utility's nonregulated business and isn't funded by electric or gas rates.

"I think there will be a stampede toward (broadband over power lines) in 2005," said Alan Shark, president of the Power Line Communications Association, an industry trade group in Arlington, Va.

Growing popularity of high-speed Internet service for game playing and downloading music, coupled with refinements in the technology itself, are building momentum for commercial deployment, he said.

One of the problems with broadband over power lines in the past has been a lack of industry standards and competing technologies, he said.

About a dozen utilities and technology companies have been experimenting with broadband for several years.

Shark said the only commercial deployment of BPL now is in Manassas, Va., where the municipality has teamed with a New York investment firm to market the capability to about

15,000 homes.

Although broadband over power lines has been discussed for years, technical limitations have
slowed its development, but that might be about to change.

The FCC recently announced it plans to begin developing rules for the technology and has signaled that its views BPL as a third "pipeline" to deliver high-speed Internet service, along with cable modems and digital telephone lines.

After evaluating various BPL technologies for several years, Grealis said Current's system "is
one that works, and we think it's the only one that works,"

Tim Barhorst, an information technology consultant in Hyde Park who has been using the technology for a year, said he's been impressed.

"I find it's very convenient," he said, noting that he can set up his computer anywhere there's an electric outlet.

He said the speeds are better than his Zoomtown service and comparable to Road Runner.

Alex Pardo of Cinergy said the Internet traffic travels on a separate band wave from the electric current, so there's no interference.

He said the utility has found no problem with radio wave interference, a concern raised by many amateur radio operators.

Your correct to misspell ration is going up again. Name Calling is
through the roof. Time to do your breathing exercises.

> This is the VERY thing most of "us" have ben arguing, but you keep trying
> to denounce as false!

That's because I think the military can take care of their own comms
w/o a bunch of heroes with "shacks on their hips" running around
acting impotent.

I realize that I am no longer an instrument of national policy. You,
however, keep flopping from one pseudo-martial program to another.
You cannot let go of the fact that you are no longer in the service.
Get over it.

And I have consistently confined my argument to what the average
citizen needs.

You consistently ignore that, and go on and on with the continuity of
operations (government) agenda.

Average citizen doesn't need comms in an emergency?

> >Now lets talk about Average Citizen (AC). AC has actually used

What I am wondering is why everyone wants to set these power levels low to
avoid testing on questions about SAFETY!

We're talking about requiring some knowledge that might prevent the person
from hurting himself or others. Why are we so anxious to avoid them..?!?!

That's not new. HF equipment has been -40dbc for while now. VHF
equipment is at -60 dbc. a 1000 watt station with a harmonic at -40dbc

is radiating at a power of 100mW. So the max limit of 50 mW only kicks
in at those higher power levels, where -40dbc exceeds 50 mW.

>
>Where does this "burden" lie? The consumers outnumber the hams 3000 to 1.

So that means that hams deserve no consideration? I'm sure the civil
rights people would love your attitude.

>When
>it comes to RFI and manufacturing quality, there are much higher priorities.
>Such as interference to and/or from cell phones, public utility and emergency
>communications, land-line telephone, television services including cable,
>satellite and broadcast, broadcast radio services, etc... all of which are far
>more common and far more important than hams.

Yes, but collectively they are all potential RFI generators. You've
just made my case even more solid by acknowledging that there are
other potential sources of RFI. There is nothing unique or special
about ham radio which would make the design of more "RF proof",
equipment any more costly than the equivalent design considerations
for other forms of radio transmissions.

Would you be so arrogant if it were a cell phone operator causing RFI? The fact is that cell phone users are experiencing an explosive growth spurt, and the potential for RFI could increase as well. If the cell phone system starts interfering with some person's TV, would you be so insistent that the cell company cease their operations?

And how about the commercial radio or TV station? Should THEY be forced to cut their power or stop transmitting, if it's found that their equipment is clean, but the lack of proper shielding in the consumer's device is allowing in an excessive amount of RF?

How about municipal systems? Pagers? Police/fire/EMS?

It would seem that the whole basis of your argument hinges on the fact that since hams (and CB'ers) are such a small segment of the population, that they deserve no consideration in the matter.

> But they also have to deal with
>government safety agencies, insurance companies, manufacturing costs (labor is a
>biggie and that's why so many jobs are exported overseas), consumer demand,
>market competition, etc..... You are talking about changing the practices of
>multi-BILLION dollar markets just so a relatively few hams can play with their
>radios?

How would adopting a more immune design affect any of the factors that you've just listed? The design improvements would be invisible to the consumer. It does not affect where the device is manufactured. The only affect will be that the changes, necessary to make a more RFI immune product, will add to the BOM cost, which the company will either pass on to the consumer, or take it out of their profit margin.

So it's all about money. Nothing more.

> I don't think so, Dave. That's an unjustified burden. When there are a
>couple million hams paying hundreds of thousands of dollars each for their
>equipment, then -maybe- hams might make those manufacturers take notice. But
>until that happens, the rest of the world sure as hell isn't going to shoulder
>the 'burdens' of a few hams.

And you wonder why hams develop an "attitude" about RFI..........

>
>
>You are missing the big picture here. Cars are common. Televisions are common.
>Cordless phones are common.

Irrelevant. The logic is the same regardless of the percentages of the
population versus various devices. If someone has to deal with RFI
from a commercial station, then they also have to deal with it from a
ham radio station.

>People expect these things to work in the manner in
>which they were intended, and accept the problems they are expected to cause.
>Ham radio stations are -not- common. Ham radio interference is -not- what people
>expect to deal with when they come home from a hard days work, pop open a brew,
>kick back in their comfy-chair and turn on the tube to watch the news.

Read Part 15 again. Then write the manufacturer to express your
displeasure with their devices not working under these conditions.

> I don't
>see how any ham should expect the average person to accept such interference
>even if it -is- the law.

Because no one forced someone to buy a particular device, and it's not
necessary to maintain a particular standard of living. In the grand
scheme of things, the right to watch TV, or play X-box, has no higher
priority that the right to freely operate a ham radio station (within
the legal standards).

You're back to making value judgements again.

>And legally, if a ham knows he is interfering with a radio or television signal,
>or even a cordless phone, it is the HAM who is at fault....

Not if his station is clean.

>97.101(d) "No amateur operator shall willfully or maliciously interfere with or
>cause interference to any radio communication or signal."

That does not apply to RFI, it applies to on-channel stations. IOW no ham may deliberately interfere with another licensed service, which occupies the same frequency including, but not limited to, 40 meter broadcast stations, stations with secondary authorization, or other hams etc.

>Notice that it doesn't exempt Part 15 devices or Sony televisions, it doesn't
>release the ham of responsibility just because he tried and failed to prevent
>the interference, and it doesn't specify where or how that interference occurs.

Because it doesn't apply to RFI.

And Part 15 itself puts the burden on the device's user when it states that "this device must not create harmful interference, and must accept any interference, including that which may cause improper operation".

>The fact is that if you know your transmission is interfering with the audio,
>distorting the picture (distortion = interference, Blackburn v. Doubleday
>Broadcasting Co., Minn. 1984), or crashing someone's wireless palm-pilot, only
>YOU are at fault. Sony is not responsible for your transmissions and subsequent
>interference, nor is Zenith, Motorola, or even the poor schmuck who paid too
>much for an El Cheapo TV that even picks up his coffee maker.... if you know
>that you are causing interference, you are legally responsible. Period. But you
>knew that already, right?

I do not agree with your draconian interpretation. If that were the case, practically every ham (or commercial operator) would be forced off the air, as a result of RFI complaints. Since this is not the case, your interpretation is obviously flawed. The FCC upholds the right of hams to operate a reasonable station. They may force quiet hours or reduced power in cases where the ham refused to compromise (some hams can be arzholes). But if the ham can demonstrate that he's made a reasonable effort to minimize the problem, including moving antennas, adding grounds and filters where appropriate, the FCC usually will take a more lenient view. We ALL know that the consumer electronic industry has become lax in proper RFI immunity design. The FCC has proposed tighter standards. The consumer electronics lobby is powerful however, and they don't want to deal with the increased cost. But THEY are the ones who have made this problem what it is.

When I can place a 1960's vintage stereo side by side with a 1990's version and see the night and day difference, what other conclusion is one supposed to make?

>>>So the interfering ham should just brush off the neighbor and transmit anytime
>>>he wants just because he can? That's not very fair, is it?
>>
>>The converse to that is that the ham should transmit at all?
>
>
>Well, how about using a frequency, band or modulation mode that doesn't cause
>any interference?

So, all hams should give up HD and simply run on 2 meters and above?
Sort of puts a damper on working DB.....

>Or maybe move the antenna so as to point the null at the
>problem device?

That's part of the many things which should 've been automatically
performed at the onset of the complaint. Assume for the purposes of
this discussion that nothing the ham does on his end fixes the
problem.

> Or if you have a vertical, how about setting up a null zone with
>another pole? I don't see any reason why it can't be done. The same laws of
>physics apply to both amateur and broadcast, and since broadcast stations can do
>it, so can hams.

Remember that when you can't cure a case of RFI from bothering
someone's Sony TV, or amplified computer speakers and you try to tell
your boss that the station should shut down.

>>>But looking at it from the other person's point of view
>>>helps a lot. For example, people have a reasonable expectation that things they
>>>own and use should work they way they were intended.
>>
>>Including ham radio.
>
>
>When you cause interference, is your ham radio not working the way it was
>intended?

If it is spectrally clean, then yes. It's not the ham's fault that
consumer devices are so poorly made.

>>> Manufacturers can't make things bullet-proof
>>
>>Yes, yes they can! Maybe not 100% "bullet proof", but certainly
>>"bullet resistant". They choose not to because of the increased cost,

>preventing you from using your radio, and you can certainly use it in a way that
>doesn't interfere with the lives of people that otherwise wouldn't even be aware
>of your existence. How is that being "held hostage"?

Read your own statement. "nobody is preventing you from using your
radio", That's not what you've been promoting here. If we adopt your
logic here, the minute the ham is involved in an RFI dispute, it
becomes HIS ultimate responsibility to "fix" the problem, even if that
means that he has to alter or stop his operation. THAT is being held
hostage.

>>>You have to draw some lines somewhere. There are what.... about 100,000 hams in
>>>the US? Out of more than 300,000,000 people? So is it unreasonable for people to
>>>expect that their modern appliances don't talk to them in the voice of the ham

>>>of people who pay for them, not the thousands of hams who interfere with them.
>>
>>Sure, but the major accountability for this issue rests squarely on
>>the shoulders of the manufacturers.
>
>
>Oh that's bullshit! You are skateboarding in a rock quarry and blaming the
>excavators for the bumps! Get a clue, Dave!

I have a clue. It's a simple business ploy for consumer device
manufactures to deflect their design responsibility, and get more
people to think like you are here, and eventually swing the
legislative tide against radio operators. That way the problem gets
solved, and THEY don't have to spend dime one.

It's the same thing with the ECPA. Rather than accept responsibility
for ensuring the security of cell phone transmissions through
encryption schemes (which would have cost money), the cell phone
makers instead lobbies congress to outlaw receivers capable of picking
up cell phones. It's joke really, as anyone who's truly interested in
listening, can find ways to do so. It was feel-good legislation and a
band aid at best. Now, the technology has caught up with the issues,
and encryption is becoming the norm, making the ECPA somewhat
superfluous. But we're stuck with it on the books anyway.

>> They have gambled that a
>>relatively small group of hams does not represent a significant risk

>
>
>Now you are starting to sound as paranoid as Twisty, and that's where I quit.
>Sorry Dave, but I really thought you were smarter than that.

So you are of the impression that big business does not operate with the bottom line as their highest priority? How receptive do you think they'd be to more stringent FCC RFI standards? Do you think that it's not in their best interests to malign (or allow to be maligned) radio operators as "RF terrorists" rather than responsible operators in order to sway the FCC into not giving serious thought to passing those tighter standards? It's funny that they're not coming to the rescue of hams and other radio operators who are being plagued by this RFI problem.

Am I really paranoid, or are you simply hiding your head in the sand?

Dave

It is common for the FCC to declared certain frequencies on the ham
bands off limits to all but emergency traffic in times of emergencies,
during hurricanes is an example.

>

The cell phone network is not even a consideration for emergency
communications by the military and civil authorities, ham radio is.

>>
>>CAN YOU HEAR ME NOW???

And that is exactly why the cell network is useless for official
emergency comms, every cell user wants to dial up twenty of their
closest friends and tell them to turn on the tee-vee, overloading the
network. The military and civil autorities do not consider the cell
network a viable means of emergency comms, they do for ham radio.

>

Which one, I have several, what are the odds they are all down at the
same time? How many cell phones do you have?

>>Your emergency plan scenario that you are acting out this weekend is
>>that cell phones won't be working.
>>
>>Am I wrong?

As far as using the cell network for official emergency comms, you can
consider it not working. In times of a major emergency it becomes
useless for anything but attempting to make a call.

Lets see if in the next emergency when another service is needed to
relieve other services, which the emergency officials call on first for
relief, lenny and witless william with their gameboy cell phones, or ham
radio.
Try as they may to discredit ham radio's usefullness in such times, the
military and civil authorities consider ham radio to be viable means of
communications in emergencies, but not the cell network.

As far as millitary and civil authorities are concerned for official
emergency comms... a big *yes*.

Sure they do, but in the case of a 9/11 emergency they would be hard
pressed to use them. Cell phone are great during the planning, but when
the real emergency comes, they become useless for emergency comms.

>
> Emergency planners don't have ham radio tagged to their belts, right?

If they are licensed hams they might have. Why would they if they were
not licensed? Face it billyboy, for the real comms needed in an
emergency situation, the cell network is not considered by emergency
officials to be of use, they do consider ham radio.

The operation of a ham radio is not a "civil right". Again, you sound like
Twisty when he says that radio piracy is an "essential freedom".

>>And legally, if a ham knows he is interfering with a radio or television signal,
>>or even a cordless phone, it is the HAM who is at fault....
>
>Not if his station is clean.

Where in the rules, or any part of the code, does it say anything like that?

>>97.101(d) "No amateur operator shall willfully or maliciously interfere with or
>>cause interference to any radio communication or signal."
>
>That does not apply to RFI, it applies to on-channel stations.

Again, where does it say that?

> IOW no
>ham may deliberately interfere with another licensed service, which
>occupies the same frequency including, but not limited to, 40 meter
>broadcast stations, stations with secondary authorization, or other
>hams etc.

Where did you find that in the rules? I can't find that anywhere. Got a link or
citation?

>>Notice that it doesn't exempt Part 15 devices or Sony televisions, it doesn't
>>release the ham of responsibility just because he tried and failed to prevent
>>the interference, and it doesn't specify where or how that interference occurs.
>
>Because it doesn't apply to RFI.

The law says "interference", doesn't it? Isn't RFI one cause of interferece? Did
you all-of-a-sudden forget that RFI stands for....

..... Radio Frequency Interference?

>And Part 15 itself puts the burden on the device's user when it states
>that "this device must not create harmful interference, and must
>accept any interference, including that which may cause improper
>operation".

Not all Part 15 devices are communication devices, and not all RFI comes from communication devices. Regardless, a television transmitter is -not- a Part 15 device.

>>The fact is that if you know your transmission is interfering with the audio,

>>knew that already, right?
>
>I do not agree with your draconian interpretation. If that were the
>case, practically every ham (or commercial operator) would be forced
>off the air, as a result of RFI complaints.

Hardly! There are PLENTY of hams, probably the vast majority of them, that don't cause interference.

This is pointless. You can make all the excuses you want. Our station will continue to put the kybosh on uncooperative radio operators that cause interference to our signal, regardless of whether they are licensed or not, and we are well within our legal rights to do so. Maybe someday a broadcast station in your locality will take the same course of action as us. And maybe they won't be so nice about it. Like it or not, that's the way it is.

Here is an answer that seems to fit the equation, Steve:

I have noted that many people that are in favor of removing Element 1
from the tests are also in favor of this removal of safety questions, or
whatever gets those tests down to an elementary school level. This is
despite protestations from some that they would NEVER support reductions

like that. My disappointment is immense that I trusted them and that they were inaccurate in their dealings with me. Whatever, I'm sure that means nothing to them.

Drawing from that experience, I can safely conclude that they are willing to chip away at any part of the test that they can, and that no level of simplicity is too simple for them.

And they have no intention of stopping there.

D'Zat work?

> We're talking about requiring some knowledge that might prevent the person
> from hurting himself or others. Why are we so anxious to avoid them..?!?!

Knowledge is BAD!

Just a correction: That should be "essential liberty", as it is in the quote by
B. Franklin.

97.101(d) "No amateur operator shall willfully or maliciously interfere with or
cause interference to any radio communication or signal."

I doubt there are many hams that cause interference maliciously. But however
unintentional as the interference may be, if a ham is aware of the interference
that he causes whenever he keys up, that certainly falls under the category of
'willfully'. The rule looks pretty clear to me. Unless someone wants to play
semantic games with the wording, I don't think there is any doubt as to who is
legally responsible.

I taped the show last night.
Guess what folks..!

BOTH Wayne and that GOLD PLATED KOOK David
were booted off of the show last night by Noorey!
Seems that Booth did not want to talk about *anything*
and all that Green seemed to want to do was shill for
Booth and his crap for sale. After wasting ONE HOUR of
airtime (..on 500+ AM stations and XM Sat Radio live)
and logging THOUSANDS of listener complain e-mails
that they were cheated, Noorey booted both these
jerks off the program!

BAAAAAAAAAAAAA
HAHAHAHAHA!!!!!!!!!
Just what these two carnival circuis
sideshow barkers needed! Booth made a
total schmuck of himself and Green sat there
grinning like a cheshire cat with a microphone
inserted up it's anus.....all on live AM Radio.

Here's the official release from C to C AM:

Meeting with Lucia?

Returning to the show, precognitive David Booth
was joined by author Wayne Green to ostensibly
discuss his recent meeting with Lucia, witness to
the Miracles of Fatima in 1917. Booth had been
invited to meet with Sister Lucia, presumably
because of the apocalyptic visions he had in
2003.

Booth said he met Sister Lucia, now 97, at a
Carmelite convent in Portugal and held a
private conversation with her for five minutes.
He would only reveal that he was told that
a "new star" that had been prophesized
about would begin to shine. Because Booth
had been booked on the show to discuss
his meeting with Lucia, and refused to elaborate
further upon it, the interview was cut short, and
the last 90 minutes of the program was
reserved for Open Lines.

Here's a repost from alt.fan.art-bell
Says it all VERY WELL!

===== cut here ======

"fc045" <fc045@hotmail.com> wrote in message
news:R2A6c.28747$%06.712@newsread2.news.pas.earthlink.net...

Noory finally stands up to the fraud$

Remember when Art Bell tried to scare us shitless by bringing on guests
who
predicted the end of the world then actively
selecting which guests he would label on his fraud "list" he would never
have on his show again? He continually
ditched guests and "friends" in a lame attempt to bring integrity to the
show yet only interested in saving his own butt. Things
came to a head when he spooked the Heaven's Gate cult members to kill
themselves. Art was never the wildly alarmist
hit-and-runner like his guests, at least apparently. Whitley Shitter and
Ed
Damn-you-all-to-h*ll we all know are on his team.
They write "collaborative" books like bargian trash bin "superstorm" and
call themselves prophets vs. the "mainstream" media.
Then Art tells them to shut up on end of the world ultimatims and even
Dames
relented that his death prophecies could with .00000001%
chance be "averted" with enough "positive" thinking by Coast listeners.

First there was Nigel Cawler or someone who couldn't come up with the UFO
landing specifics, and Art got "impatient" and knocked him
off after the break in 1996. Follow up to the heady days with the Hale
Bopp
"companion" kept people awake with deathwatch pulses. Then
Art dumped the Reverse Speech guy. Courtney Brown was next. Later on it
was
the guy who lit "flares" in the nevada desert where an old lady in
a wheelchair had traveled there spending hundreds of dollars to see a UFO.

Finally, Noory couldn't stand it anymore. Night after night, he had to
have
the frauds sell their books and videos and make excuses for them.
And now he finally broke with "Wayne Greene" and the "vision-1979" man
tonight-morning. What a schmuck the vision man is saying 97% of
the world's population is going to die in Sept. (read 5.9+ billion people

wasted just like that). If vision-man cared so much for humanity
why doesn't he just offer his information free on his website? At least
put
up a pay-pal donation option like Hoaxland does now.

At least Hoaxland is entertaining. And he's quick on his feet especially
with the scientific stuff. Hoaxie should be a NASA administrator instead
of the lazybum desk pushers in charge of NASA now.

But all the other "end of the world" pushers of their video and books, I'd
say Noory continue and throw them all out if Art won't do it.

(10 million listeners. If only .01% scared shitless listeners bought into
the bunk, that's 1000 people who buy $20-$100 books or video tapes
making a hefty $20,000-$100,000 from 1 night of advertising! This must go
through every bullshitters mind who's lucky or glib enough to
get a guest spot on C2C. No wonder Noory has to reign it in finally. C2C
has
become whose the best bullshitter who can come up with the
best spiel and promote books/tapes so listeners can "learn more". C2C has
become the "Who wants to be a millionare" of the airwaves, or
any of thos "reality" shows which always feature a lame $100,000+ prize at
the end of the season.

I have been following the arguement with interest. Are you saying that no matter what the reason for the alleged interference, that if the ham knows he is interfering, then it is the hams fault?

Have you considered 'poor design' of the receiver? The FCC has.

That's what I have repeated half-a-dozen times. Hey, I didn't write the rules. And don't forget that this is a Part 97 rule written specifically for the amateur radio service.

>Have you considered 'poor design' of the receiver? The FCC has.

Then why didn't they include such an exception in the rules? Does the rule say, "....unless the receiver is of poor design."? Or, "....unless the receiver is suseptible to radio frequency interference."? No. And I think I have explained the reasons why to the point of excess.

It was called the "citizens radio service" even back then, and the 465 MHz
allocations were referred to as Class A and Class B citizens' band - or cb.
(One class was voice and the other was radio control). When the 27 MHz
allocations were authorized, they were known as Class C and Class D cb.

CB was already more than a decade old in 1958.

They do, huh? So rather than flipping open their cell phone and
stating "dial EOC," they race back to the EOC and invoke a 100% recall
of emergency responders without even trying their cell.

> > Emergency planners don't have ham radio tagged to their belts, right?
>
> If they are licensed hams they might have.

And the chances of that are?

They probably have a greater chance of gettin thru on their cell
phones than they do being licensed.

Why would they if they were
> not licensed?

They would have an amateur hooked to their belt keying the PTT button.

Face it billyboy, for the real comms needed in an
> emergency situation, the cell network is not considered by emergency
> officials to be of use, they do consider ham radio.

Yet they wouldn't be w/o that cell on their hip. Wonder why?

JayJay, I happen to be an amateur. I have equipment. I have been
trained.

I am available should the need arise.

I do not discredit amateur radio's usefulness in such times.

Yet you greatly discredit the impact that cellular telephones have
made on emergency communications.

If the ham's station is clean and the interference is caused by the
device being interfered with due to poor design or a device that is not
supposed to pick up radio waves, the ham has no legal responsibility. It
is the responsibity of the owner of the device to fix the problem.

The ham radio frequencies are not the same frequencies as commercial radio and television. If the ham's signal is clean, then any device that is disrupted by that signal is incorrectly acting as a receiver of what should be out of band for that receiver. It's not interference when the commercial TV or radio receiver picks up signals that it should not be able to receive.

I don't have the FCC comments in front of me. Since you are the blowhard here I'll let you find them. But sometime back, and I don't remember how far. Sometime in the 70s or 80s sounds right, the FCC basically told the manufactures to clean up their equipment. And that in 'most' cases the receiving equipment was at fault.

So, I am sure you will rant and rave, but I am not going to do your research. I highly recommend you do so. And quite showing your ignorance.

If you were in my neighborhood I assure you I would fight your silly little broadcast is superior crap.

>use, thus a "citizens band" or "cb".

Only two of the original four Citizens Band Radio Service classes
survive.

"Class C" CB evolved into Radio Control as shown in Part 95,
Title 47 C.F.R. That Radio Control Radio Service also achieved
its own band in the 72 MHz region, now favored by modelers
instead of the 27 MHz fixed frequencies.

"Class D," originally only 23 fixed frequencies on the old amateur
11 meter band, was expanded to 40 fixed frequencies several
years ago. "CB radios" now are all considered to be THE CB.

"Class A" and "Class B" CB, both on UHF, were deallocated
and eliminated from U.S. regulations back before "CB" was
expanded from 23 to 40 channels.

"Class C" and "Class D" CB was created in 1958 by the FCC.
That was over 45 years ago. I read about that first in 1958 in
Popular Electronics magazine during lunchbreak at Ramo-
Wooldridge Corporation in El Segundo, CA.

>>>Because if there were 100 million amateur licensees in America like

>network a viable means of emergency comms, they do for ham radio.

The military have their own radios. Those work very well and
in environments far harsher than most "emergencies."

Civil authorities have their own radios. Public Safety Radio
Services include police, fire department, and medical services.
Those are backed-up with emergency electrical power at
base stations and are already networked.

Real emergency organizations consider ALL forms of
communications to be viable and will use anything that survives
a real emergency. They plan for that, train for that, and work
with the infrastructure of existing radios and landlines.

The best source of what happened aboard the "fourth plane"
on 11 Sep 01 came from passengers' and crews' cell phones.
Hijackers had taken over regular aircraft communications
devices in the cockpit. No ham radio was on board to do
anything in that Very Real emergency.

In the Pentagon Attack area during 11 Sep 01, military and
civilian communications was handled by existing military
and civilian communications means...a part of that was by
cell phone although most of it was by VHF and UHF HTs.
No ham radio was used in fire control or rescue work then.

In the WTC Attack during 11 Sep 01, the NYC Emergency
Communications Center (in an adjacent building) was largely
destroyed by falling debris, also severing many trunk lines
of the telephone system. NYC police and fire units did work-
arounds using their own radios in a relay system to several
centrals, calling in other agencies as well as special units to
help. Some cell phone service did work, regardless of myth to
the contrary and some wired phone service still worked, used
by almost anyone on the WTC Attack scene. Amateur radio
did not play any significant part (if any at all) during the few
hours after the Attack on the WTC.

Since neither you nor your equipment is identified and we don't
know the working status of your "several" radios, the above is
just a brag claim of no intrinsic value.

>>>Your emergency plan scenario that you are acting out this weekend is
>>>that cell phones won't be working.
>>>
>>>Am I wrong?
>

>As far as using the cell network for official emergency comms, you can
>consider it not working. In times of a major emergency it becomes
>useless for anything but attempting to make a call.

That is a popular myth but it remains only a myth.

The cellular telephone network is part of the telephone infrastructure
and is intimately connected with the local exchange's switching unit.
That switching unit is designed to handle only a fraction of installed
numbers, both wireline and cell phone. But the switch itself is also
backed up by battery supplies "riding on" the primary power; also
true for cell sites themselves.

During any sudden event there WILL be a flurry of telephone calls
made and that MAY overtax the limited number-handling capability
of the switch. The probability of overload is in inverse relationship
to the suddenness of the event. The overload, if any, does NOT
last indefinitely. Such an overload is also dependent on the
telephone exchange and subscriber services arrangement. Note:
Not all subscribers are routed through the switch but may be direct
to some PBX-equivalent.

The onset of an earthquake is sudden, as yet not predictable. That
will guarantee an overload of telephone switches as worried,
distraught subscribers seek information and reassurance.

The onset of the 11 Sep 01 Attack by four hijacked airliners was not
only sudden but unprecedented, without any possible warning. The
subsequent crash of two airliners into the WTC towers did destroy a
portion of the lower Manhattan telephone system wiring but did NOT
destroy or disable the entire Manhattan telephone infrastructure.

The onset of a fire storm, typically in dry open country, is not sudden
and may take literal days from ignition start to reaching fire storm
conditions. There is plenty of warning time using conventional
communications means to begin fighting that.

Hurricanes are known and predicted from NOAA tracking, allow days
for all in the path to prepare. Again, communications may be done
by conventional means. Tornados are more sudden but allow hours
of preparation from first sighting. Storm and flood conditions allow
hours to days of preparation, again using conventional
communications to effect that.

Whenever conventional communications means survive any
emergency, those will be used. If from nothing else, their availability
such as with cellular telephones (at least 100 Million in the USA).

Regardless of the popular myth, the telephone system in the USA
has remained viable and grown in two decades that include several
earthquakes, several hurricanes, several tornados, several fire
storms, several floodings and storms...and the 11 Sep 01 Attack
On America from three hijacked airliners deliberately crashed into

buildings. It remains working.

There is no reported evidence of amateur radio ever stopping an earthquake, hurricane, tornado, flood, storm, or aircraft hijacking.

>> more than ONE poster in this forum, and always to his ultimate
>> detriment.
>
>Because Amateur Radio exists in a parallel universe where conventional
>laws of physics do not apply.

The sad part is that some, like Robeson, perceive U.S. amateur radio
only in terms of their own involvement. Further, he demands some
kind of "rule by tenure and involvement" (similar to a kind of ancient
tribal leadership by brawn and bravado) solely by the participants.

Robeson reacts in the typical "military syndrome" of absolute pride
in "his outfit" and assumes some kind of officer or NCO rank above
others, demanding uncompromising obeyance to his "orders." If
there is objection to what he says, he goes into the abusive nature
of typical NCOs whipping the troops into line.

The problem is that U.S. amateur radio is NOT a military service
nor even a paramilitary service. It is basically a hobby, a
recreational activity involving radio. It is, by default, a hobby
because federal regulations forbid monetary compensation for
any radio communications rendered.

There is the common thread among the "tribal rule" individuals that
no one unlicensed in amateur radio can possibly know anything
about amateur radio, therefore they should be silent. Preposterous
since U.S. amateur radio activity is widely publicized (among those
who care to find out) and federal regulations forbid any secrecy in

amateur communications.

No one on the staff of the FCC or the Commissioners themselves are required to have any amateur radio licenses, yet the FCC has the lawful duty to regulate amateur radio and mitigate interference matters, up to and including imposing fines and calling on U.S. Marshals to arrest extreme miscreants. That rather destroys their concept that "only other amateurs can tell them what to do."

Amateur radios operate by exactly the same physics as radios in all other radio services. Propagation of radio waves occurs in exactly the same way as for all other radio services. There are no exceptions despite some odd ideas and strange misconceptions among certain radio amateurs.

It is impossible to rationally discuss anything with certain people (such as Robeson) since they are too emotionally-driven and too prideful in their concept of their personal hobby involvement. They must - absolutely - have their way or all are treated to personally abusive remarks from them.

The above is representative of their non-reasoning in demanding a morse code test for all new amateurs...pure emotional basis on what they had to endure long ago (and probably resent).

Not always true.

You want to select the 11 September 2001 Attack on America as
a typical emergency but that was a very UNtypical emergency
that no one could foresee or plan for. In the "9/11" incident ALL
methods of communications were strained.

There are NO verifiable stories about amateur radio doing anything
to aid anyone in the first few hours of the Attack in New York City
on 11 Sep 01. Conversely, even though the NYC Emergency
Center was almost destroyed in that Attack, police and fire
department personnel were in constant communications before and
immediately after the Attack in and around the World Trade Center.
Add to that the medical people, NYC officials, and various utilities
and other businesses who got into immediate action. All of that is
quite well documented in many and various media outside of
hobby groups.

>> Emergency planners don't have ham radio tagged to their belts, right?
>
>If they are licensed hams they might have. Why would they if they were

>not licensed? Face it billyboy, for the real comms needed in an
>emergency situation, the cell network is not considered by emergency
>officials to be of use, they do consider ham radio.

"Officials" who have already been through emergencies of many kinds consider and plan for ANY kind of communications in ANY kind of emergency or disaster situation.

A case in point is the "other" "9/11" Attack on the Pentagon in DC. A year prior to the "9/11" Attack, the internal HVAC and utilities communications and control system of that very large (horizontally) structure were modified to allow selected sections to be isolated, cut off from the main systems in order to minimize fire damage. That system got a very real test on 11 Sep 01 and proved to be good. Pentagon damage was confined to the immediate quintant (?, one-fifth) with no spread beyond the aircraft crash point. After-crash fire control and search and rescue was coordinated by on-site military and civilian communications, not by amateur radio.

In the largely forgotten "fourth aircraft" incident on 11 Sep 04, we have become familiar with the phrase "Let's [rock and] Roll!" that was transmitted over a cellular telephone from the hijacked airliner passenger cabin by a passenger. A stewardess' cell phone call from that fourth hijacked plane has been recorded by the media and played several times in broadcasts. Since the hijackers had control of civil airways radios on that fourth plane, the only available means of communications for the passengers was by cell phone. Those calls got through. There are no viable reports of amateur radio being used while that most definite emergency situation was happening.

The "9/11" Attack is popular to espouse because of the enormous emotional impact to all Americans. But, it was an ATTACK done by other humans against all of us and definitely NOT some kind of natural event emergency or disaster. The "kamikazi" nature of this suicide attack was NOT anticipated by anyone and all were in surprise and all had to work through the immediate aftermath with whatever reseources were available.

"Radio" (as in two-way transceivers) doesn't exist in just cell phones and ham rigs. There are - literally - hundreds of thousands of radios existing now and in all the government and commercial infra-structures. All of those hundreds of thousands of infrastructure radios are available NOW and already networked. Those are and will continue to be primary radio communications means in the real emergencies that have been and are expected to happen in the future. The secondary means are a mixture of infrastructure fall-back planning and private-use radios, principally utility, business, and other commercial radio services. Amateur radio is in the tertiary level lumped in with CB, FRS, GMRS, and other private radios...seldom organized to work with primary and secondary levels and not depended upon as reliable for anything but health

and welfare (psychological reassurance) messaging for victims
after an emergency has occurred.

It does no good to express outrage and perceived insult the radios
in an essentially-recreational activity isn't venerated or rewarded
for exaggerated tales of heroism and good deeds. That only shows
an emotional instability that refuses to consider the vast infra-
structure of communications that exists and is robust enough to
have survived many disasters and emergencies of the past.

If cell phones work in some future emergency, they WILL be used.
There are just too many of them, the cell infrastructure too large to
overlook them. Public Service radios are already organized and
backed up, networked, planned, trained to work in emergency
conditions. Those will bear the brunt of future emergency
communications as they have successfully in the past. In the USA
there exist many and varied wired and fiber communications means,
locally to nationally...plus a variety of frequencies, modes, and
methods already in-place with the military and national guards
units, able to use equipment designed and proven to work through
the harshest of all enviornments: Warfare. Everything that can
work is useable and has been used, emergency planners and
coordinators already well aware of what is available and reliable.

This isn't the 1920s when "radio" was not widespread nor
technologically advanced, suitable only for some broadcasting
and on-off keying mode communications. This is 80 years later,
over three generations of time, and "radios" are numerous in the
governmental and commercial infrastructure. It would be best to
stop the self-perceived outrage at your hobby being slighted to
educate yourself on the entire world of "radio," what is there and
how it is being used and planned-for in real emergencies.

He can't tone it down. No control there. Obsessive personal
necessity to go off on an emotional bender every time someone
hints at disagreeing with him and his "pride" about his personal

activities which he deems far superior to what others do.

The unfortunate part is that his lack of emotional control in post after post makes the hobby look bad to others. He can't see that and refuses to recognize it, so we all get to see the name-calling and damning epithets directed against others.

In the case were the inteference is the fault of the device the FCC has
many times told the complaing party the problem is theirs and not the
Amateur's, and it is the complaintant's responsibilty to fix the problem.
I will site a case that happened to me. When I was first licensed I
liked to operate on the 15 meter band (21 mHz). A neighbor had a
television that used 21 mHz for the Intermediate Frequency. Guess what?
Every time I operated the tv IF picked up my signal just like a 15 meter
receiver. She complained to the FCC. I was asked to responed to the FCC
about the problem. When I explained the problem, the FCC told the
neighbor it was her problem because her television was picking up
signals it was not supposed to and I was under no responsibility to fix
it or to stop operating on 15 meters.
Now go on back to the cb folks where you can spout your nonsense and no
one knows the difference.

Go read Part 15 !! The FCC has specifically said that commercial devices aren't supposed to act as receivers of signals outside their bands. If they do, it is the fault of the receiver.

If the ham is transmitting on his own frequency with a legal and clean signal, then he is not interfering with any service. Interference is transmitting on the same frequency as another service. We don't do that.

I suggest you call NORAD/NORTHCOM, FEMA, The Red Cross, Civil
Defense,and other emergency agencies and ask them how much weight they
place on the cell phone system for emergency comms in times of a major
disaster.

Because in a major disaster calling for emergency comms, the cell
network will be, far all practical purposes, useless. The emergency
officials will not rely on the cell network for major comms during an
emergency. In addition to the communication ability of military and
civil services, they will rely on Amateur Radio if it is needed, and
Amateur Radio will be there if needed. If a service is needed to
suplement other comms, they will not call on or count on the cell phone
network, they will call on Amateur Radio.

1302. Re: Why the caste system? was: NCVEC files license restructuring

> Sure, but I'm not even close to convinced that any tests need or should

>be simplified. I wonder if anyone can provide evidence that the those
>giving the tests are being overburdened?

It's not about being overburdened, but about matching the test to the
privileges. Why test for 1500 W safety if only 100 W is allowed?

However, this does not mean that *all* safety questions should be removed -
just those connected with high power. And those high power questions must then
migrate to the next-higher class of license.

So it makes sense that if the entry-level test gets smaller, the next-level
test (General) must, of necessity, get bigger to contain the stuff removed.
Does the NCVEC petiton even mention this?
>
>> 2) To give an incentive (challenge) to learn more and qualify for a higher
>> class license. (If the entry-level license conveys all privileges, why
>> bother to upgrade?)

>are happy to just ve on VHF and above, the Technician ticket is just the
>thing. Want HF access? Take the General test! Without Element one, there
>isn't anything to hold ya back.

Here's the problem:

What we have now is a VHF-UHF-centric entry level license. The privileges are very heavily weighted towards the bands above 30 MHz and away from HF/MF. This means that most new hams will start off on VHF/UHF.

And that means they will also start off with a local/regional focus, and almost certainly with manufactured equipment.

The current Tech Q&A pool contains a wide variety of subjects - covered in very little depth. The wide variety of privileges granted requires all those questions. You and I may find them trivial, but some beginners may not. After all, don't you know at least one "professional" who has not even obtained an entry-level amateur license?

Wouldn't it make more sense for the entry-level license to contain a balanced mix
of privileges, including significant HF as well as VHF/UHF privileges, coupled with a test that matches the privileges granted? That way, new hams can sample more of what ham radio has to offer.

For example, imagine the prospective ham who wants to build kits, restore old gear or even homebrew from scratch. Which do you think would be a more realistic first project - a simple HF rig or a simple VHF/UHF one? Which do you think will result in more QSOs and more "reward" for the builder?

Yes, it's possible to work the world on VHF/UHF, but isn't it easier for a beginner to do so on HF? Particularly with limited antennas?

That's the basic thinking behind many of the proposals. What they're really trying to do is to reinvent the old Novice license. The Novice concept was to have a very limited license to get people started, so they could learn-by-doing, see what was what and then upgrade if they liked ham radio.
>
> From what I see, simply removing Element 1 and letting the dust settle
>is a better plan than either the NCVEC or ARRL plans.

I think way too much is made of Element 1 and way too little of other factors.

But consider this: Suppose FCC did just that (dropped Element 1 and let everything else alone). And suppose we did *not* see a big sustained rise in the number of new hams and the number of upgrades. That would prove, once and for all, that Element 1 was *not* the problem at all! Some folks would be very upset.....

Plus if that were done, it would be years before FCC got around to another NPRM cycle. Remember all that "biennial review" stuff? Well, it's been just about 4 years since the 2000 restructuring took effect...

>

Point is, however, that "caste" implies something that a person cannot change.
That's simply not true of the situation we're describing.

This is a prime difference between the ARRL and NCVEC proposals. And it must be
opposed. No good can come of such requirements.

I thought that we in the good old USA were the sole proprietorship of the bum society. It appears not. The liberal use of the universal "sentence enhancer" in the above post reflects nicely upon the intelligence of the poster. As an old black minister said in a sermon ....people who use that language should have their mouths washed out by their mamas with Bowlene.

Please send me your name and address and I will gladly forward a thesaurus of the English language so you can find and use the appropriate adjectives.

God Bless KI3R Tom Popovic Belle Vernon Pa.

"Tone it down a bit"...?!?!

YOU made the assertion that "unlicensed services play a "major"
role in emergency comms".

I've asked you three or four times now to substantiate your
claims. YOUR claims, Brain...cited word-for-word, repeated by you
several times.

You "respond" by telling me I am rude and obnoxious.

You call ME "bizarre", yet you make outlandish assertions in a
public forum, then dodge all requests to "prove", at any level, your
claims.

I believe you to be a chronic liar. You have been "called" on
several occassions to back up your assertions, but then use this ruse
to try and avoid taking responsibility for your own actions.

Call me rude and obnoxious if you think it deflects attention from
you, but I can assure you that it does nothing of the sort. If
anything, childish dodges like this only highlight YOUR bizarre
behaviour.

The FACTS are that the "unlicensed" services (11 meter CB, FRS,
MURS and Part 15) provide NOTHING more than an ancilliary function in
ANY "emergency comms" and you know this to be true.

I certainly do in as much as I am INVOLVED with "emergency comms"
on SEVERAL levels, not all of which involve the Amateur Radio or CAP.
Most everyone else in this forum knows these things to be true too.

You and Lennie seem to be the only ones in this forum who think
that if you keep repeating the same lame, untrue "stuff" that it will
somehow manifest a thread of truth. Sorry...that doesn't work.

Now...PLEASE try and exceed my expectations with the next post and pony-up some cajones to either admit you are either blatantly lying, making wild guesses, or just trolling for the sake of making arguments that you obviously can't support.

Or REALLY try something new and discuss something you have some EXPERIENCE in...THAT would be refreshing.

Steve, K4YZ

That sums it up quite nicely, Mike.

And consider this: If FCC accepts the signed statement of a newcomer about Part
97, why test for it at all at any class of license?
>
>> We're talking about requiring some knowledge that might prevent the
>> person
>> from hurting himself or others. Why are we so anxious to avoid them..?!?!
>
> Knowledge is BAD!

Here's another possibility:

Portraying something as difficult can have a dramatic effect on how difficult
it is perceived to be. For example, a major part of marathon training is
learning to believe that you can, indeed, do the distance. That sort of thing

does not replace training runs, but it is a part of the training. You have to believe you can do it.

In the same fashion, portraying the exam tests (written or code!) as "difficult" can have a similar effect.

Well then, why not just limit ALL classes to those low powers an
eliminate (mostly) the so called safety problem altogether. Make all
appliance equipment mandatory and pot the innards. Make new foolproof
connectors, and require all antennas to be installed by properly
licensed contractors.

I know answering a question with a question is bad form, but frankly,
it isn't much of a leap of imagination to rationalize our cherished
privileges right out from under our feet.

I assume that you have been in group meetings, where the original idea
is mutated beyond recognition? I see it happen all the time. This is
only one more reason why I don't like these proposals *at all*. They
seem a bit of a Pandora's box IMO.

Give me a good argument why Hams should need to run power over 100
Watts, 50 Watts, 5 Watts?

> However, this does not mean that *all* safety questions should be removed -
> just those connected with high power. And those high power questions must then
> migrate to the next-higher class of license.

If high power RF is dangerous, why should it be allowed at all? For
anyone. If we wanna start that game, that question WILL be asked. Do you
not talk all over the world with qrp power? I myself have talked to
Australia on 10 watts. No record, but just a personal best. They hear
those stories, and suddenly it looks like that might be able to protect
those self destructive hams from themselves. Just like cigarette
smokers. And with the efforts to lower cell phone power going on, plenty
of non-technical regulator types will think this is a good idea, no?

> So it makes sense that if the entry-level test gets smaller, the next-level
> test (General) must, of necessity, get bigger to contain the stuff removed.

> more of what ham radio has to offer.

Actually, I find the differences between local/regional, (V/UHF) and
worldwide (H/MF) to be one mighty and fine incentive to upgrade. In
addition, given the results of the way the Technician license evolved,
from a experimenter's license to the real entry level license, I would
have to say that many many hams are happy to stay right there. Many of
them only want the type of coverage that the Tech license gives.

I believe that the propagation differences between the VHF and up, and
HF and down make a natural and rational dividing line between
privileges. It also makes for less of a class system. If the Tech has
the power and privileges for their respective bands, and they are happy
there, then it's a great thing.

> For example, imagine the prospective ham who wants to build kits, restore old
> gear or even homebrew from scratch. Which do you think would be a more

Well that isn't going to happen under some of the scenario's. I'd
certainly like that myself.

And How!

BTW Jim, in one of my previous posts I used the letter combination LIB.
Especially in this age of internet acronyms, that would be tricky. It's
a sound thing. Along the lines of MR Ducks. Simply say the letters and
you'll have the comment. L I B (well I'll Be) All you have to do is
remember the context in which I wrote it.

Of course those calls got through dimwit, the plane was in the air away from any city that was experiencing a disaster, and any number of cell sites that were not overloaded with thousands attempting dial 911, their friends, ect., were available.
Do you think if that call had been attempted in NYC it would have gotten through? Maybe, but more than likely not.

And that is the point. An emergency call got through. They get
through every day using cellular phones.

> dimwit,

Interesting how you smart guys always end up calling people names.
That usually happens about the time they run out of valid arguments.

the plane was in the air away
> from any city that was experiencing a disaster, and any number of cell

Hmmm. So passengers on airlines should not use cell phones in
emergencies. Every passenger flight should contain one Air Marshall
and one Amateur Radio Operator to handle whatever emergency comes up.

I suggest you tell Average Citizen that he or she needs to have an amateur radio operator strapped to their hip for emergency purposes.

Until they buy into your argument in large numbers, cellular telephones will continue to eclipse amateur radio for Average Citizens emergency communications.

I hadn't heard of Dick's passing. Sorry. I'll thumb thru my past
issues of QST and look for his call on the Silent Key pages.

There was another Dick who passed several years ago. His son sent an
email to those in his e-mail address book to notify. That was very
thoughtful of his son.

Thank you for the information. bb

1316. Re: Wayne Green on C to C AM Thursday 3/18

73 failed because of the "dumbing down" of ham radio. I started
subscribing to 73 and Ham Radio, remember that one, because of their
TECHNICAL content and projects. I look through my late 70s and 80s
issues and they are just full of projects.
Yes, Wayne was full of himself. Tho sometimes he said things againest
the arrl that needed saying, causing food for thought.
What killed 73 was solid state "sealed" rigs that could not be modified
and the manufacturing of full featured radios cheap by yesterdays
standards making homebrewing economically unreasonable. Why do you think
Heath, Echo and other kit manufactures closed. Back in those days all
rigs had huge wiring harnesses that HAD to be hand soldered. Real labor
intensive. Labor costs now with solid state and "computer" type boards
is actually the least of the manufacturing cost. A complete turn around
from the '70s & '80s time frame.
Hams, for the most part, quit building and experimenting. So 73's and
Ham Radio's meat and potatoes disappeared.

You have only one size of emergency: Huge!

That's laughable.

The emergency
> officials will not rely on the cell network for major comms during an
> emergency.

Hint: They will if it is useful for them to do so. Should the
network fail, they will resort to other means.

In addition to the communication ability of military and
> civil services, they will rely on Amateur Radio if it is needed,

So Amateur Radio isn't their first choice? How sad.

and
> Amateur Radio will be there if needed.

Perhaps it will and perhaps it won't. That is the nature of
volunteers. And if you're radio volunteers are also committed to
numerous other emergency and quasi-emergency relief agencies, and your
emergency is Huge, and if the cellular network is down, and if the
agency wireless communications fail, Then and only then will you learn
if Amatuer Radio was there when needed.

If a service is needed to
> suplement other comms, they will not call on or count on the cell phone
> network, they will call on Amateur Radio.

Because all emergencies are Huge!

>>
>
>Go read Part 15 !! The FCC has specifically said that commercial devices
>aren't supposed to act as receivers of signals outside their bands. If they
>do, it is the fault of the receiver.

I have read Part 15 and it says no such thing. What it -does- say is this
(emphasis added):

Sec. 15.17 Susceptibility to interference.
(a) Parties responsible for equipment compliance are ADVISED to CONSIDER the
proximity and the high power of non-Government licensed radio stations, such as
broadcast, amateur, land mobile, [etc], when choosing operating frequencies
during the design of their equipment so as to reduce the susceptibility for
receiving HARMFUL INTERFERENCE.

15.3(m) defines "harmful interference" (again, emphasis added):

ANY emission, radiation or induction that [...] seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with this chapter.

Now look at 97.101(d) again (and again, emphasis added):

No amateur operator shall willfully or maliciously interfere with or cause interference to ANY radio communication or signal.

Notice that the limiting word 'harmful' is NOT included, which means this rule applies to ANY form of interference. It also says "ANY radio communication or signal", which does -not exclude- intermediate frequency (IF) radio signals.

>If the ham is transmitting on his own frequency with a legal and clean
>signal, then he is not interfering with any service.

Most of the time that's the case.

> Interference is
>transmitting on the same frequency as another service.

The FCC defines interference in 2.1(c) as:

"The effect of unwanted energy due to one or a combination of emissions, radiations, or inductions upon reception in a radio[chyph]communication system, manifested by any performance degradation, misinterpretation, or loss of information which could be extracted in the absence of such unwanted energy."

So much for your semantic spin-job.

I find it interesting that Steve, having supposedly served in seven
hostile actions, never served in a unit with a single KIA, present or
past.

Even though I was in the USAF, I served the Second Infantry Division. It has a proud history and I was proud to serve it. Though hostilities were low due to the cease fire of 1954, I would like to think that having competant armed forces facing the enemy along the DMZ helped maintain that cease fire.

Though monetary compensation is forbidden, it often occurs. Some call them "repeater dues."

Be that as it may, the Amateur Service has been useful and probably will continue to be useful in emergency communications when other comms fail.

> There is the common thread among the "tribal rule" individuals that

You make the mistake by considering all emergencies to be equal. They are not. Cell phone is great for communicating when you go off the road in an ice storm. It is useless when all the local cell towers have been taken out by a hurricane. Emergency communications need to be appropriate to the situation. Nothing more and nothing less.

Let us put you theory to the test.

Someone builds a crystal rig just for the fun of it. As typical, it has
almost no selectivity. I can hear nearby hams as well as the station I
am tuning.

According to your argument, I can shut down everything I hear that
isn't the station I'm trying to listen to.

Why don't you try it and report back your results to us?

Your argument is reminiscent of the fellow that got on rrap and claimed
that after the international treaty requirement for Morse code was
dropped, that every Technician now had HF access.

RFI supression equipment is sold, this place is typical:

http://www.sncmfg.com/telecom/noise_protection/ht-stories.html

This story is very good:

http://www.sncmfg.com/telecom/noise_protection/rid-ht.html

Some interesting stuff from part 15:

PART 15--RADIO FREQUENCY DEVICES

Subpart A--General

Sec. 15.5 General conditions of operation.

(a) Persons operating intentional or unintentional radiators shall not be deemed to have any vested or recognizable right to continued use of any given frequency by virtue of prior registration or certification of equipment, or, for power line carrier systems, on the basis of prior notification of use pursuant to Sec. 90.63(g) of this chapter.
(b) Operation of an intentional, unintentional, or incidental radiator is subject to the conditions that no harmful interference is caused and that interference must be accepted that may be caused by the operation of an authorized radio station, by another intentional or unintentional radiator, by industrial, scientific and medical (ISM) equipment, or by an incidental radiator.
(c) The operator of a radio frequency device shall be required to cease operating the device upon notification by a Commission representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected.
(d) Intentional radiators that produce Class B emissions (damped wave) are prohibited.

another interesting part:

Sec. 15.17 Susceptibility to interference.

(a) Parties responsible for equipment compliance are advised to consider the proximity and the high power of non-Government licensed radio stations, such as broadcast, amateur, land mobile, and non-geostationary mobile satellite feeder link earth stations, and of U.S. Government radio stations, which could include high-powered radar systems, when choosing operating frequencies during the design of their equipment so as to reduce the susceptibility for receiving harmful interference. Information on non-Government use of the spectrum can be obtained by consulting the Table of Frequency Allocations in Sec. 2.106 of this chapter.
(b) Information on U.S. Government operations can be obtained by contacting: Director, Spectrum Plans and Policy, National Telecommunications and Information Administration, Department of Commerce, Room 4096, Washington, DC 20230.

[54 FR 17714, Apr. 25, 1989, as amended at 62 FR 4655, Jan. 31, 1997; 63 FR 40835, July 31, 1998]

http://www.arrl.org/tis/info/part15.html

is another good link.

http://www.fcc.gov/cgb/consumerfacts/interference.html

More homework is left up to you.

"Sorry to not bow and scrape to your most esteemed worthiness, but if you ever got down from your high horse, you might be tolerable to other civilized humans."

Sounds like good self-advice, Leonard. Why don't you try it? And if you can't, just do your best impression of a human being. It would certainly be an improvement over what we've seen here from you in the past.

BTW, we put our Amateur Radio gear on-line for the first time in the Mobile Incident Command Center the other day. First contact was via CW with a station in Iowa. Conditions for SSB were just not up to par. We just love having all those tools in our communications kit.

We also tested our state of the art sat-phone/VTCs and wireless VOIP network. They worked flawlessly -- what wonderful pieces of gear. We are now completely wireless (including phone lines) so we can go wherever needed. 21st Century comms at its best -- which means a mixture of the old and new together to give us the strongest redundancy possible.

When trying to do a semantic spin job, the trick is to always accuse
the person your discussing the issue with of it.

And you have spun a good one. In the time I have been a Ham, you are
the only one that has put forth your argument. You're taking several
different sections of the rules, combining them together, then adding a
liberal dose of conjecture and conclusion jumping. Doesn't work like
that. Maybe consulting a good communications lawyer might help?

Hello, Steve

I think I have figured out the real problem behind most of the flames both in this group and rec.radio.cb. I might be wrong, but it appears everyone is trying to defend that their particular turf is "important" and someone else's is not.

If you go back into the 50s and 60s, amateur radio served quite well for long-haul phone patches and in emergencies. Very localized emergencies, such as an auto accident would largely be reported by normal telephone. In the 70s, the cb craze took hold and certainly I would expect that cb was sometimes used to report the accidents. The small number of amateurs would preclude them being involved very often in such a situation. Voilla, cb is more important than ham radio.

Fast-forward to today. Cell phones are likely the primary means of reporting those accidents. Who needs the hams? Some hams will say "who needs cb?"

A lot of folks state that amateur radio isn't a service; it's just a hobby.

Few take into account how fragile that infrastructure of cell phones, telephones, and internet can be when a large area is affected. That nasty ice storm in the North East (was it 1997?) affected areas for hundreds of miles. There were no cell phones as the cell phone towers went silent after power had been out for days. No electricty, no heat, no telephones for hundreds of miles. A relative of mine in Gouverneur, NY, had no heat, power, or telephone for two *weeks*!!!

One amateur repeater was pressed into service for the police. I do not know if the repeater was reprogrammed or they simply moved the police repeater to the amateur site. The amateur site withstood the ice and they had generator backup with a *lot* of fuel available.

I don't think it is as important "how" something is done as opposed to the fact that it gets done. If someone is assisting at a shelter cooking meals, that individual is *doing* something. That, to me, is more important than all of the useless crying that goes on around these parts from time to time ;)

BTW, during that ice storm, the calls were going out for batteries, flashlights, generators, blankets, food, coffee, and mobile amateur operators with HF capabilities. If you have nothing working for well over 100 miles in the N.E. U.S. and Canada, you will likely not get it done on VHF/UHF or cb.

> emergency communications.

So they may, but in times of emergency, the military and other civil
authorites will not rely on cell phones to handle major emergency
communications. They will rely on Amateur Radio if the need arises and
AR can supplement military or other civil emergency comms, but they will
not rely on the cell network.

You mean that Amateur Radio withstood the ravages of the storm and the
cell network did not! Looks like Amateur Radio was there when needed
again, but the cell network just couldn't hack it.

>

I guess the batteries for the cell network hadn't been charged up in
prep for an emergency.

1332. Art Bell to discuss BPL on C-to-C AM TONIGHT (??) 3/20/04

---

FOUND THIS IN ALT.FAN.ART.BELL - NOT CONFIRMED
IF THIS PROGRAM CHANGE IS VALID, BUT IF SO IT SHOULD
BE A GOOD PROGRAM FOR ALL RADIO AMATEURS...

"Occasional AB Listener" <iamnot@aol.com> wrote in message
news:405C9BD6.7DFD@aol.com...

Tonight (March 20, 2004), at 10:05 Pacific Time on "Coast to Coast A.M,"
late-night radio talk-show host Art Bell is going to take a breather
from the customary paranormal and conspiracy-related format and discuss
a topic that will interest most -- if not all -- radio amateurs,
shortwave radio enthusiasts and broadband users: Broadband Power Lines
(BPLs).

Now under development, BPL is a technology that will allow computer
users to access high-speed, broadband Internet connections just by
plugging the computer into the wall outlet. No need to pay hundreds of
dollars in installation, activation/deactivation and service fees for
Digital Subscriber Lines (DSL) or cable modems, just literally plug and
play.

Fans and supporters of BPL include the Federal Communications
Commission, Power Line Communications Association and local utility
companies. Since power lines are available in urban and rural areas,
while DSL and cable services are limited or inaccessible in some
sparsely populated areas, BPL is anticipated to be a major challenge to
the existing methods of high-speed access. But BPL is not without its
drawbacks.

The American Radio Relay League (ARRL) is concerned about the amount of
RF interference generated by BPL. According to their website
(http://www.arrl.org/tis/info/HTML/plc), "Studies done by amateurs and
regulators worldwide demonstrate conclusively that BPL that uses HF or
VHF spectrum will cause serious degradation of the communications
capability to nearby receivers on frequencies that BPL uses. HF is a
unique international resource that is in use by commercial radio
services, broadcasting, amateurs, government and military operators."

Early Saturday morning, about 2 a.m. PST on 3840kHz, Art himself (radio
amateur W6OBB) and his roundtable of fellow ham radio operators were
discussing the amount of interference -- especially from 2MHz to 80MHz
-- BPL can cause if service is implemented nationally. The hams

conversing with Art on the 80-meter band said that constant buzzing heard on those frequencies will anger shortwave listeners and hams alike if RF interference is constantly heard on those frequencies.

Another problem is the potential health risks associated. Could a substantial increase in RF exposure -- especially around the household -- contribute to the rise in cancer-related diseases? A very close friend of mine, who happens to be a ham radio operator living near Switzerland, explained to me that most of Europe has scrapped plans for BPL because of possible RF-related diseases, as well as RF interference in commercial and amateur/SWL communications.

Nevertheless, tonight's "C2C" is going to be extremely interesting and worthwhile to those who are interested in all forms of radio communications. My friends and I will definitely be listening.

If your crystal radio does not have the selectivity to seperate one transmission from another, you can't expect it to work at the minimum level of performance that would be expected if the receiver is to designed according to the basic requirements established for the broadcast bands (or, for that matter, any other service). IOW, you can't expect it to function as a communication receiver, the key word here being 'communication'. That's just common sense.

And the majority of the problems with RFI are not of the selectivity of the receiver, which makes your example moot.

> Your argument is reminiscent of the fellow that got on rrap and claimed

>
>http://www.arrl.org/tis/info/part15.html

I already quoted that law in another post. How does this support your argument? And again, where does that, or any other law, excuse a ham for a violation of their own rule against interference; i.e, 97.101(d)?

>is another good link.
>
>http://www.fcc.gov/cgb/consumerfacts/interference.html

A carefully-constructed PR statement, probably drafted by Riley himself, in an attempt to pass the buck to the manufacterers, take the heat off the hams, and reduce the number of RFI complaints the FCC has to deal with. Notice there is no mention of the possibility of dirty transmitters, illegal CBers, or of any legal responsibility by anyone -including- the manufacturers. Typical FCC squirm-out.

> More homework is left up to you.

I did my homework long before this thread was started. The rule is clear. Any attempt to pin a different interpretation on it is no better than illegal CBers claiming that CB rules are not laws, or any of the other cock-and-bull excuses they make.

I think you were looking in the mirror when you came up with that opinion
because I have been staying true to 97.101(d) the entire time. It is you and
everyone else that is grasping for irrelevant issues, such as interference
-from- Part 15 devices, and making up your own definitions for 'interference'.

And -still- nobody has come forward to cite any law that exempts hams from
97.101(d) when the receiver being interfered with is of 'poor design'.

> Doesn't work like
>that.

No it doesn't. I'm glad you agree.

> Maybe consulting a good communications lawyer might help?

Got a good one at the station. Talked to him on several occasions about this and
other issues.

Sure, the cell phone towers have batteries. They're likely fine for a number of hours of outage - but Gouverneur had no power for over two weeks. Those batteries aren't designed to last for weeks of drain without recharge. In this country, an engineer could well be fired for overdesigning something (that costs money). Likewise, those batteries are there to keep things working for a *short* power outage. It would cost too much to design those cell towers to run on batteries for weeks on end with no recharging in that period. It probably wouldn't have mattered much anyways as the conventional phone lines were out too - and cell phones are wireless only between the user and the tower. BTW, unless you had your own generator and were on two-way satellite internet, you wouldn't have the internet either. No telephone, no dial-up, no DSL. I have no idea how well any cable systems made out, but with the telephone system down I don't know if they had any way to get information out of the area.

Mama Dee, YOU go read Part 97 as well as Part 15 and take a look at the big frequency allocation table in Part 2.

Go look at the sub-parts Frank showed you and read them for yourself.

>If the ham is transmitting on his own frequency with a legal and clean
>signal, then he is not interfering with any service.

Ahem, next time you are out driving with a mobile rig (hopefully NOT during an "ice storm"), stop next to any highway patrol car and key-down your mobile rig (that is "legal and clean"). See if your rig will NOT interfere with patrol communications. :-)

>Interference is
>transmitting on the same frequency as another service. We don't do that.

Ahem, HF amateur radio is allocated mostly primary for amateurs. Not quite so for military communications, including VHF. The military generally stays away from ham bands to avoid the irritating "this is OUR band!" shouting and hollering of hams when QRMed by signals they can't identify nor demodulate.

A quarter million SINCGARS sets operate on 30-88 MHz but ARs for Signal centers say to avoid the ham 6m band...they can work through any ham signals quite well, but not the opposite.

Dee, "interference" can be anything, even a "clean and legal" ham rig disrupting another radio service.

Spank, spank

Dee, in trying to spank us children, you are trying to use a paddle
too large for you to handle.

ALL emergencies ARE "equal" to a victim.

Whether the victim is having a heart attack or trapped in a burning
WTC tower, that is a definite emergency situation for them.

The concept and implementation of the "911" emergency system
IS intended for handling real emergencies in real time as
expeditiously as possible. It is not perfect, but it is better than
all previous methods of seeking aid at the onset of a very real
emergency situation to a victim.

"Traffic handling" by any communications means, amateur radio
included, is ALWAYS strained during the ONSET of a sudden
emergency. The bigger the emergency situation, the larger the
strain on everyone directly involved, amateur radio included.

Amateurs like to bring out the 11 September 2001 Attack on
America, featuring all the emotional heart-tugging scenes we've
all seen about the burning and collapse of the World Trade
Center in New York City. The typical comment is simply "all
the cell phones failed" and that somehow justifies amateur radio
being elevated to a place of honor and glory and wonderfulness?

In actual truth, there's NO valid evidence that any amateur radio communications was used as any essential communications in the first few hours after the ONSET of the WTC towers crash site. In those same hours the police and fire departments of NYC were able to work around destruction of their own emergency communications central, report in, ask for assistance, ask for other services, try to organize a very sudden disruption that brought chaos to a small part of Manhattan Island. All of the infrastructure of NYC did a fantastic job in my opinion, saving whomever they could find, giving immediate aid when they could, losing some of their own in the process. They used whatever communications means they could, landline or radio or on-foot note relaying. Was cellular telephone an aid? Partly. Loss of the World Trade Center did not shut down Manhattan or other boroughs.

Did the abominable, monstrous Attack on the WTC require any notification that it happened? Hardly. It was visible to millions. Communications was necessary to report the extent of the Attack, what assistance was immediately needed, and generally begin organizing to handle the totally unexpected chaos that was not envisioned or expected by anyone. Did that communications "fail?" It did not fully fail even though the local communications infrastructure was partly destroyed.

Did amateur radio "emergency teams" help any during the worst part of the WTC Attack's aftermath? None have been reported. Amateur radio is reported to have helped a day after the Attack, passing "health and welfare" messages. There are no reports of hams bravely sending CW on HF messages from the WTC site vicinity to aid victims or call for fire crews and construction crews. It wasn't Kuwait of 1990, a lone Kuwaiti sending "reports" of the invasion and occupancy by Iraqi forces by ham radio.

Sudden onset of emergencies: The 17 January 1994 Northridge Earthquake is memorable to me since I was awakened by the jolting and the sudden cessation of electrical power a bit after 0430 hours. Most of the Greater Los Angeles complex lost all primary electric power service due to a fallen MHV tower of the Pacific Intertie. About ten million without power. Did ham radio "emergency teams" spring into action and begin emergency communications? I really don't know since all that can be verified is the glowing self-important phrasings of a few ham radio groups well after the onset. I was then associated with utility service communications and had nothing portable to listen to ham bands. The infrastructure of LA didn't need ham radio at the onset of that emergency since the public safety agencies had already prepared themselves with back-up emergency power and had trained for that eventuality. The fire departments here have long had dedicated alert landlines that do not route through telephone switches. All the engines rolled out of the fire houses as a matter of standard procedure during earthquakes. No "alert" was

needed that an earthquake had started, few people slept through it unaware of it.

There were no reports of heroic ham radio operators sending emergency messages out of LA at the onset of that earthquake of ten years ago. Yes, a day after that earthquake a small ham radio group was handling "health and welfare" messages. So was FEMA using their ready-to-transit-by-air sat terminals and having a video "billboard" display for messages. The FEMA billboard got broadcasting attention.

I was born and raised in the northern midwest, learned to drive and licensed in Illinois. Well before cell phones were even imagined. Anyone who goes out driving DURING an "ice storm" is either a trained, experienced utility vehicle operator or a crazy civilian who badly needs their common sense repaired. Try another metaphor. May the metaphors be with you.

Spank, spank

Emotional ham-lifestylers do that sort of thing regularly in here.

This anonymous anamalous poster seems unaware of the civil
airways communications capabilities of air carriers ("radios on
airliners"). He (or she, unknown) could have mentioned that and
a single button-press for the Transponder "squawk" signal. That
would have been a knowledgeable retort. But, those don't work
for spit if hijackers have taken over the cockpit.

> the plane was in the air away

Our friend AA seems to think that "911" is a national network...an
overload in NYC is going to disable Jersey City or Anchorage? :-)

>> Do you think if that call had been attempted in NYC it would have gotten
>> through? Maybe, but more than likely not.

Sounds like a Plan! Send that to Dave Sumner (ARRL executive president for life). He can make a dandy Editorial on that.

On-board Emergency Hams can wear a little shield in a wallet just like real cops. In-flight attendants can ask other passengers, "Coffee, tea, or health-and-welfare-messages?" :-)

Hello, Mark

Interesting. I didn't pay for installation or activation. Certainly, I pay for service. I *love* that statement about no need to pay service fees. Yepper, it's gonna be free! Just plug and play.

Why don't I believe that? Why do I get the feeling that there will be charges? I also *highly* doubt it will service places outside of cities and suburbs.

As far as plug and play, when I fire up on HF, it's gonna be plug and pray LOL.

The Korean War Cease Fire took place in 1953 but sporadic fighting happened for at least another three decades. The Korean War remains in a curious "cease fire" after nearly 51 years, not over yet. Korea is still divided and the "talks" continue at Panmunjom on a regular basis. Ridiculous.

Robeson tries to vainly manufacture indiscretions by others but all that does is to discredit himself. He says that I "associate myself with KIAs" and that is not true. What I've stated is that I was assigned to a Signal Battalion, then called the 71st, in February of 1953. That Signal Battalion was organized in 1946 to directly serve Far East Command Headquarters then in Tokyo. After the June, 1950, start of the Korean War, FEC Hq ordered some personnel and communications equipment from the 71st Sig Svc Bn to be air-lifted into Korea to reinforce communications there. The C-54 crashed on landing, killing all on board, on 1 Jul 50. The main billet (and US Army Central Command offices) was named "Hardy Barracks" after one of those killed; "Camp Tomlinson" was made the name of the station ADA transmitter site and barracks at Kashiwa in mid-1956, also honoring one of those killed. There were three other casualties from my Signal Battalion between 1952 and 1956.

I use the term "my Signal Battalion" because I was assigned to it and remained in it for three years. During that time the name was changed and between 1956 and 1958 it was consolidated with the 72nd Signal Battalion at Camp Zama as part of the post-Korea downsizing of military in Japan. The battalion's name changed twice more after that, eventually stabilizing as the 78th Signal Battalion, still at Camp Zama, under the 516th Signal Brigade at Fort Shafter, Hawaii, that Brigade attached to Headquarters, U.S. Army Pacific. Callsign ADA remains as that of USARPAC Hq after 6 decades of providing primary communications.

Even though my service was uneventful and rather ordinary, "my battalion" earned two Presidential Unit Citations while I was assigned to it. I've stood Retreat more than once to honor those few signalmen from the battalion who perished while on duty. We all "got the message through" in the everyday motto of the

Signal Corps. I'm proud to have been a part of it.

I've been in communications with five former signalmen who were in my battalion plus a civilian who was a DAC at ADA. One of the signalmen, Eugene Rosenbaum, served at the same time I did and we knew each other then. Gene is a long-time radio amateur, retired from the FAA, and his interest now is in radio controlled model airplanes. We fought no glorious battles, did not earn any pretty medals (beyond a Good Conduct medal), just did our duty. No "hostile actions," just the ordinary hazards of military service. In the words of one of the signalmen, "we (of the 71st) didn't yield an inch of Tokyo ground to the communists!" :-)

Actually, we yielded to the USAF. As part of the downsizing after the Korean War and before the start of Vietnam War, the USAF was assigned responsibility for all the HF radio, torn-tape teleprinter relay, and microwave relay activity formerly done by the Army. That continued by the USAF until 1978 when the whole thing was shut down and returned to the Japanese. Only a portion of the huge ADA receiver site (Camp Owada) remains, leased by the U.S. DIA as a monitoring station.

Camp Tomilinson was built on a former Japanese airfield and about 1 mile by 2 miles in area, festooned with wire antennas for (then) 43 HF transmitters. Barracks and offices and mess for personnel were in one corner of the airfield. We literally lived IN an antenna field there (USAF folks did after they took over). The USA and USAF added some more transmitters, replaced some of the old ones. 24/7 operation by both service branches.

All of that is gone now. HF radio is no longer a primary medium for military communications, has been relegated to a secondary role. Primary medium is the DSN, the "government's own Internet" through wirelines, fiber-optics, and satellite radio relay with terrestrial radio relay on microwave troposcatter and LOS terminals plus towed telephone central office equivalents available that can connect any unit if any existing communications infrastructure is totally destroyed.

>> The problem is that U.S. amateur radio is NOT a military service
>> nor even a paramilitary service. It is basically a hobby, a
>> recreational activity involving radio. It is, by default, a hobby
>> because federal regulations forbid monetary compensation for
>> any radio communications rendered.

>Though monetary compensation is forbidden, it often occurs. Some call
>them "repeater dues."
>
>Be that as it may, the Amateur Service has been useful and probably
>will continue to be useful in emergency communications when other
>comms fail.

Absolutely. ANY useable communications means is always useful
in an extreme emergency.

However, too many hams wallow in that possibility as if it were an
everyday fact, wanting undue praise and respect for being part of
it (yet not ever having been IN any emergency themselves).

They don't understand that most emergencies are rather small-
scale things, unlikely to make the cover of Time or Newsweek.

>> There is the common thread among the "tribal rule" individuals that

>
>I've seen it bragged on here that the ARRL Amateur Handbook is found
>in professional radio engineers library shelves. Must be a one way
>street.

That may be true in some places and I have seen personal copies
of the handbook on individual office bookshelves. Usually we are
all awash in great heaping globs of other printed material and
specifications. Reference textbooks are many and varied in any
engineering environment. An ARRL Handbook there would be a
rare find. Referencing an ARRL Handbook in a Report is likely
to put one in the negative side of personnel review... :-)

If the Handbook is the only big reference they have on radio, and
never having seen what is available on ALL radio, they will
naturally assume professionals use it too. They seldom do.

A column by Robert W. Lucky in this months' issue of Spectrum,
the IEEE membership magazine, addresses "archiving" of
information with an example of his employer's (Lucent) library
closure.

>> No one on the staff of the FCC or the Commissioners themselves

>of non-technical regulator types will think this is a good idea, no?

"Radiation" is a talisman word for paranoic control-freaks...and some
politicians wanting attention.

A half century ago I was part of a group of radio transmitter operators
running KiloWatt output HF transmitters. We got rather simple verbal
instruction (no classrooms, no written tests) of "don't touch this (or
that), it will KILL you." No problem. In three years of transmitting, no
one at ADA was killed by HV or RF.

Arguing with radiation paranoics about things they don't understand
is quite another thing. That's why we've all got those EMI regulations
now.

>> So it makes sense that if the entry-level test gets smaller, the next-level

The military and civil authorities don't even consider the cell network
in there emergency communications plans, they know it is too unreliable,
they do consider Amateur Radio.

Maybe YOU ought to re-read Parts 15 and 97 more closely?

USGPO has all the Parts of Title 47 C.F.R. on free download.
You can link to it from the FCC website.

Have you made any Comments on Access BPL to the FCC?

NPRM 04-29 is also free for the download at the FCC website.

Look under Docket 04-37 for the first document or go to the
Office of Engineering and Technology for a direct link.

Or are you just content to make like a hockey player in here,
thinking you make "goals" by sticking everyone and tawkin tuff?

Nothing is "turned around". Everything is as clear and concise as 97.101(d). Why don't you find yourself a lawyer and have him/her try to find the answer you can't find yourself -- which law exempts hams from 97.101(d) when the device receiving the interference is a "poor design"?

What law releases a ham from the legal responsibility of a violation of their
own rule against interference just because the device that is interfered with is
of "poor design"? Why can't you answer the question, Mike? Why do you continue
with this prolonged song and dance routine?

Personally, I think it's arrogance to the Nth degree that Lennie
even remotely PRESUMES himself to be "civilized"...especially when
it's his profane, untruthful rantings herein that so lovingly endeear
him to us all.

> BTW, we put our Amateur Radio gear on-line for the first time in the Mobile
> Incident Command Center the other day. First contact was via CW with a

> needed. 21st Century comms at its best -- which means a mixture of the old
> and new together to give us the strongest redundancy possible.

I spent the day at TEMA (Tennessee Emergency Management Agency)
EOC and GUESS what I found...?!?!

A rack of R F Harris gear DEDICATED to Amateur HF nets. Also, the
EOC has two operating positions for V/UHF, as well as a packet station
and a seperate UHF rig dedicated to the SKYWARN net.

Seems that TEMA and FEMA don't have the same cavalier attitude
about Amateur Radio that Lennie insists such governmental agencies do.

In the course of the discussion the California ACS came up.
Seems Lennie doesn't have all his facts together there, either...And
THAT came from the mouth of a FEMA officer...Not that I doubted Lennie
was wrong.

"I'm laughing at the superior intellect..." Again.

As I stated in another thread, I had the chance to spend the day
in the TEMA/FEMA facility in Nashville.

The ONLY "unlicensed" devices in the facility were two cordless
phones, both of which were part of unsecure phone lines.

I am wondering, Brain, is THAT what YOU call a "MAJOR
ROLE"...?!?!

Putz.

UPS float-charged batteries are designed to keep the equipment on
line until the backup generator gets up to speed/voltage. This
assumes that the latter is tested regularly. Pac*Bell learned that
the hard way when one of their gas turbine backup generators
literally tore itself to pieces when it attempted to start after
the 1989 Loma Prieta earthquake - it had not been serviced or
tested for four years. Any garage mechanic can service a diesel
genset - it takes an aviation A&P qualified mechanic to service the
gas turbine....and their services cost money.

>It probably wouldn't have mattered much anyways as the conventional
>phone lines were out too - and cell phones are wireless only between the

Survivable microwave and fiber are the downlinks of choice nowadays.

The engineering firm that I consult for is in the business of
designing such facilities for the public safety amd land
transportation sector. Seismic Class 4 - storm and earthquake
survivable - is now required for all new or upgraded critical (i.e.
public safety) radio installations in California and we recommend it
for everyone.

What the make-it-cheaply phone companies do would make ol' Ma Bell
spin in her grave.

So you really didn't need to contact Iowa with amateur radio. I was wondering about that.

> 21st Century comms at its best -- which means a mixture of the old
> and new together to give us the strongest redundancy possible.

Strong redundancy equals GAO audits. They don't like redundancy even if it means survivability. They'd rather have the money spent on food stamps and WIC.

Arnie, its always great to read one of you posts. Thanks for stopping in.

Len Over 21 knocked the little old lady resthome resident from in front of the computer, grabbed the keybord and blathered:

> Well, next time that happens, send me an aid request via NTS.
> I'll put together a CARE package for you with an extra can of
> Sterno so you won't be too cold. Ought to arrive in two months;
> takes 7 weeks to get the NTS message through...allow for
> sufficient time.
>
> Anything to help.

No, ham radio does not "save the day" in every emergency, although it has at times, nor does every ham claim to be a hero, although some have gone above and beyond just like a lot of other good folks. Not often does ham radio become *the* major means of communications in a disaster situation, but it has in the past and likely will again in the future. Not in every disaster is ham radio called upon to help and supplement other official comms, but it has in the past and likely will in the future.

Poor old senile lennieboy, he just can't bring himself to admit that ham radio has and will play a vital part in emergency communications, and he can't be a part of it because he can't pass the test.

The military, Homeland Defense, and other civil officials recgonize the value that ham radio can be in times of emergencies, they intergrate it in their disaster planning, but they wouldn't give you the time of day lennieboy. Grinds your hemorrhoids dosen't it?
Now go back to pestering the little old ladies in the sitting room.

We've had plenty of comms ability since then, but put the gear in the MICP
as a means of improvement. Improvement of comms systems is a good thing,
right William?

> First contact was via CW with a
> > station in Iowa.

We tested the gear on ALL bands (and both modes). And Iowa was the place we
happened to contact first. If I need to contact FEMA via HF in another
state (including IOWA) I think I have proven that it can be done by this
test. And that, after all, was the purpose to begin with.

> We just love
> > having all those tools in our communications kit.

Sure we did. The Ham gear is for redundancy. That's why we have it. A
test of it's HF capability was important. Test complete, test successful.

> > 21st Century comms at its best -- which means a mixture of the old

Strong redundancy equals uninterrupted communications in an emergency. The
GAO cares not as long as we spend the money appropriately. Since the
purchases were pre-approved, I guess we already did that.

> Arnie, its always great to read one of you posts. Thanks for stopping

>addressed (such as holding W2NSD when living in 1 land)...

Bill:

What's wrong with holding an out-of-area call sign? I spent seven years as N3CRA while stationed in Germany and New York, and subsequently spent six years as WR2F while stationed in Colorado and Delaware. Holding an out-of-area call sign has been "legal" for at least as long as I've been a ham, and that's over 23 years now.

>Wayne now seems to be a sucker for every half-baked idea that comes along.
>(heard the program, sad.)

I heard the broadcast myself, in it's entirety. It made me cringe. If I had not been
reading his "Never Say Die" Editorials (purely for fun) in 73 Magazine for years, I
would have thought that this guy was a total fruitcake, and so must be everyone else who claims to be a "ham radio" operator. I'm concerned that a lot of non-ham listeners may have reached that very conclusion, but then again, those who listen to "Coast to Coast" are probably already predisposed in that direction. The only reason I listened was that I was taking a long night-drive from Delaware to New York, and that W2NSD just happened to be the "Guest Nutcase" that evening.

Len,

It wasn't the lack of a back-up generator that brought the police tower down - it was *ICE*. Ice destroyed the antenna.

Immediately after the attack on the WTC, everyone in Rochester that was on AT&T worldnet lost our internet. Funny how that happened. We had telephone, but no dial-up internet. I suspect there were major switching operations where the attack occurred.

As far as the ice storm, I was lucky. It did not get this far west. It was the Eastern half of NYS.

BTW, I am beginning to understand how you manage to have so many detractors in this newsgroup ...

Frank, there is a thread on rra.misc you should be in on. It's where some dude has done an interpretation on f.c.c rules, and now argues that jamming cell phones is legal. Sounds like a discussion that you would have a lot to contribute to. You might want to get on over there and participate! 8^)

>

According to your warped logic, if a commercial broadcast station is
comming in on a nearby neighbor's crappy stereo, and the neighbor has
been made aware that they are interfering with his stereo, and the
broadcast station continues to broadcast, now knowing they are
interfering, then the broadcast station is legally at fault.
If a police or fire department base station is interfering with someones
television due to front end overload because the poor design of the set
prevents it from rejecting out of band signals, and the person notifies
the police or fire department of the interference, and if the police or
fire department continue to use their radios, even though they are clean
of harmonics, spurious signals, and the problem is the fault of the
television set, then the police and fire department are legally at fault.
NOT!!!!!!
Same for any ham radio station.

Wayne Green loser? You can like or dislike the guy but making such
idiotic statements like that make you look like, well, an idiot. Below
are some of Mr. Green's accomplishments, loser eh? How about postings
yours Bushog? 7-11 cashier, wal-mart stocker, truck driver, am I
close? Sounds like you are a loser in life who's more than a bit
jealous than anyone who actually has a successful and fulfilling life.
Do society a favor and die asshole.
Melvin

From http://www.waynegreen.com
Who is Wayne Green? I'm a been there done that guy. I have......

piloted a nuclear attack submarine 800 feet under the Pacific ocean.
piloted an Air Force C5B (it's bigger than a 747).
climbed the Great Wall of China
visited the Chinese terra cotta army in Xian.
operated a ham station from the famed American Embassy in Tehran.
operated from the Korean Demilitarized Zone.
operated for two weeks from King's Hussein's palace in Amman, Jordan.
visited the lost city of Petra in Jordan.
scuba dived in the Red Sea.
visited 133 countries (so far).
helped new technologies such as cellular telephones. personal
computers, and compact discs to grow into major industries.
represented the US at an international communications conference.
represented New Hampshire for Governor Sununu at a governor's
conference in Halifax.
served on the New Hampshire Economic Development Commission.
been a president of the Peterborough NH Chamber of Commerce.
been on the board of directors of billion dollar IDG corporation.
been a professional psychologist.
had over 1,000 (long) editorials published - so far.
started first digital communications magazine in 1951, (Amateur Radio
Frontiers).
started the first microcomputer magazine (Byte).)
started the first computer magazine devoted to a single computer (80

Micro - for the TRS-80)
started the first Apple magazine (InCider).
started the first Commodore magazine (Run).
started the first laptop computer magazine (Pico).
started one of the first personal computer software companies (Instant Software).
opened computer software stores - eventually sold a national chain of 58 stores.
while in college started a broadcasting station (WRPI) which is now the largest student activity.
served on the Rensselaer Polytechnic Institute Board of Overseers and RPI Council.
served as the First Executive in Residence at RPI.
served as a consultant for the RPI Business Incubator - which won the 1996 prize as the best in the country.
been a licensed amateur radio operator as W2NSD since 1940.
pioneered amateur radio repeaters since 1969, starting with WRLAAB on Mt. Monadnock NH.
established amater radio in Jordan in 1970 and wrote their rules and regulations.
supplied and installed the first repeater in Jordan, J-Y73, in 1973.
helped radio amateurs pioneer FM, radio Teletype, single sideband, and slow scan TV.
bounced amateur radio signals off the Moon from the big dish at the Arecibo Observatory, PR.
been editing and publishing amateur radio magazines for 47 years.
a state-of-the-art digital recording studio.
four record labels and produced over 150 CDs.
helped re-popularize ragtime music and personally knows all of the top ragtime performers.
started 25 successful publications in the radio, computer and music fields.
published over 100 books.
wrote one of the first books on digital communications.
been on an African hunting safari.
visited the ruins of Ba'albek in Lebanon, the Queen of Sheba's water catchments in Aden.
visited the Pyramids, the Sphynx. the ruins in Athens, the Taj Mahal and Katmandu.
visited the head-hunter longhouses in Sarawak.
helped organize and lead trade groups of around 250 people to yearly electronic shows in Japan, Korea, Taiwan and Hong Kong.
given keynote addresses to radio, educational, computer, and music conferences.
helped invent a new kind of loud speaker - borrowed $1,000 on my car to start a manufacturing company and within two and a half years it became the largest speaker manufacturer in the country with seven factories.
performed in The Mikado and Pirates of Penzance in high school
served as president of radio clubs in high school and college.

served in Navy 1942-1946 in WWII - electronic technician on USS Drum SS-228 (which is on display at Mobile, Alabama) for five war patrols.
been a radio engineer and announcer in North Carolina, Florida and Virginia.
been chief cameraman at WPIX-TV (11) in NYC.
produced and directed network TV shows in Dallas and Cleveland.
a reputation as a gourmet cook.
served as president of Porsche Club of America.
raced my Porsche on the Nurburgring and Solitude race tracks in Germany.
both driven and navigated in many national SCCA car rallies.
served as a founder and first secretary of American Mensa.
a Ph.D. in Entrepreneurial Science.
lectured on entrepreneurialism at Yale, Boston University, Case Western, Babson College, RPL and many other colleges.
been on the first commercial airline flight between Philadelphia and New York in 1927.
flown with father since 1922.
served on the FCC's National Industry Advisory Committee (NIAC).
served on the FCC's Long Range Planning Committee (LRPC).
testified before a Congressional hearing on the music industry.
had the usual toys: airplane, Porsche, yacht, Jaguar, Mercedes 600 Pullman limosine.
worked on a Guggenheim grant on a color organ for the Guggenheim Museum on 5th Avenue.
graduated Bliss Electrical SchooL Tacoma Padc MD.
attended Radio Materiel School on Treasure Island, San Francisco and graduated as ETM2/c.
served for five war patrols on SS-228 USS Dnun, made ETMI/c.
taught electronics at Submarine School, New London CT.
organized and run successful mail order Elm Stamp Company at age 12.
sung in St. Pauls Church choir as boy soprano.
sung in Philharmonic Choir of Brooklyn.
sung in Erasmus High School Choral Club.
pioneered the 6-meter ham band as the first New York City station on that band.
run a 6-meter beacon station for several years in cooperation with the Radio Amateur Scientific Observations (RASO) program.
for years had a VHF/UHF station on Mt. Monadnock NH; regularly heard for over 600 miles.
been Excutive Secretary of the Music Research Foundation, Madison Avenue, N.Y.
worked for GE as a test engineer on Army radio equipment.
been an engineer at Airborne Instrument Laboratories in Mineola NY developing radar equip.
tried marijuana in 1948 to see what it was like.
tried LSD in 1960 to see what that was like.
drunk with shipmates on liberty while in the Navy. Have seldom drunk since.
tried smoking as a teenager, thought it was stupid. Ignored peer

pressure.
know the real dope on Amelia Earhart's last trip.
been convinced that NASA had to have faked all of the moon landings.
driven from Brooklyn NY to Peterborough NH (250 miles), averaging 100 mph one night - including a gas stop.
interesting friends such as Barry Goldwater, King Hussein, Steve Jobs, Bill Gates, and Rod McKuen.
been convinced that with proper nutrition and avoiding poisons we ran dependably live to over 100.
ridden Starlit Night, the Ringling Brothers top show horse.
a professorship of horsemanship and taught riding instructors.
a Hubbard Dianetic Auditor certificate and has processed over 100 patients, with some remarkable successes.
swum the three mile length of Coney Island many times.
investigated crop circles and a UFO hovering over a house in nearby Francistown NH.
Other than all that I've been taking it easy and having a great time.

<kt4stnospam@csam.net> writes:

>No -- actually I get a lot of respect in my job, so I don't need any from
>you whatever as my ego is just fine.

Not believable. You've been absent from public view in this newsgroup
for months. The first post you make is a direct attack against me.
Not about amateur radio policy, but about me.

You still have a bruised and sore ego from long-ago go-arounds
in here. You need better treatment for those self-perceived wounds.

>As to the 1930s radio comment. You seem to be caught in a 1950's time warp,
>Leonard (Hell, no surprise there). The great gear that we have in our MICP
>is more akin to the 2030s -- We are well ahead of the curve.

You are now working in the electronics industry too? Amazing.

Even the electronics industry can't predict what is coming in
25 years from now.

>I'll bet you don't even know what a "Scotty" does?

In reference to what? A Scotsman? A doggie? An old tissue?

Maybe you've been into the Black and White too much and
are seeing a future that isn't there...like in the year 2030.

Don't drink and derive.

>Again, no surprise if you don't. A
>quick Yahoo search to save face if you do.

I care nothing about your "quizzes."

You aren't into the NCVEC proposal, just your own nasty little ego
wanting vengence for perceived past wrongs in a newsgroup.

Did you ever get a chance to see a U.S. Army Regimental Signal
Center in operation when you were employed by the Army?
I'll bet you didn't and probably didn't even try.

Did you ever get a chance to look at FM 24-24 back when you
were an Army dick? [excuse me, "investigator"] I guess not.

We could have had a decent, civil discussion back then but, no,
you had to assert yourself and make like an "expert" with all the
"Army uses CW" talk. Tsk, tsk, tsk...all that time and wounds

still fester in you.

>AT&T worldnet lost our internet. Funny how that happened. We had
>telephone, but no dial-up internet. I suspect there were major switching
>operations where the attack occurred.

No loss of AOL here. Nor of broadcast TV feeds from NYC on
the major networks.

>As far as the ice storm, I was lucky. It did not get this far west. It was
>the Eastern half of NYS.

I'm sorry you had problems. Others in here have not been sorry
that the southwestern USA has experienced several spectacular
emergencies with losses of life. Some were actually overjoyed
that we had problems...such as the 1994 Northridge Earthquake
that killed over 50 people and got us an in-person Presidential
visit. Some easterners are very parochial and consider our "west"
to be not of the Union. [search Google for examples]

In such an environment of truly rude and obnoxious newsgroupies,
it is difficult to be Their kind of "civil" and support their bigoted
opinions. My apologies for slighting anyone in the NY state
area suffering winter ice storms and prolonged power outages.
I have friends in NY state too. They don't work in communications.

>BTW, I am beginning to understand how you manage to have so many detractors
>in this newsgroup ...

I am sure you do. :-)

Independent thought is a terrible thing to some. They can't stand
it and fight with might against it. "Ein volk, ein Reich!" (sound
familiar?) :-)

See the title of this particular thread. One individual seeks to
harass and intimidate another amateur...on baseless "charges"
that the individual manufactured out of spite and/or illness.

Do you approve of such behavior?

>Len Over 21 knocked the little old lady resthome resident from in front
>of the computer, grabbed the keybord and blathered:

Tsk, tsk, tsk. Tuff Tawk already in "reply?" :-)

My home is quite restful, thank you. My wife likes it, too. But,
it is not a "resthome"...2000 square feet, 1/3 acre, worth at
least $350K on the market. My wife and I have three PCs at
our disposal, all working, and that's not counting two older,
smaller ones in the workshop (the indoor one, not the garage).

>No, ham radio does not "save the day" in every emergency, although it
>has at times, nor does every ham claim to be a hero, although some have
>gone above and beyond just like a lot of other good folks.

Good sign. You are beginning to see reality.

>Not often
>does ham radio become *the* major means of communications in a disaster
>situation, but it has in the past and likely will again in the future.

When in the past?

When in the future? You mean when aliens from outer space
attack us and you morsemen save the planet? (Hollywood
already did that)

>Not in every disaster is ham radio called upon to help and supplement
>other official comms, but it has in the past and likely will in the future.

I'm sure.

>Poor old senile lennieboy, he just can't bring himself to admit that ham
>radio has and will play a vital part in emergency communications, and he
>can't be a part of it because he can't pass the test.

Tsk, tsk, tsk. You've been on the same stuff that the gunnery nurse
takes?

Try not to sprinkle in so many insults. They don't work and all it
does is make you look puerile (as in wise-ass adolescent).

>The military, Homeland Defense, and other civil officials recgonize the
>value that ham radio can be in times of emergencies, they intergrate it
>in their disaster planning, but they wouldn't give you the time of day
>lennieboy.

The time of day arrives accurately from WWVB over our two radio clocks. I can depend on it. If they fail to work there is always WWV on HF. No problem.

The military, "Homeland Defense" (isn't that "Homeland Security?") is not the place to get "time of day." Neither is my civil official government high-sounding title administration. But the city of Los Angeles has an excellent, tried and proven Emergency Command Center...I'm very familiar with that.

>Grinds your hemorrhoids dosen't it?

No. Why the concern over my medical condition? Do you have a pile problem? See a medical doctor for treatment if so.

>Now go back to pestering the little old ladies in the sitting room.

My wife is watching television right now. In the family room. She's the only other human living in this house. She is of average size, not "little."

We aren't needing to take in boarders, income is quite comfortable, thank you.

Try at least to be civil if you won't identify yourself. You are behaving like Broose and the gunnery nurse.

> "Tone it down a bit"...?!?!

Yes. You go off on an emotional tirade whenever someone has
a contrary opinion to your own.

> YOU made the assertion that "unlicensed services play a "major"
>role in emergency comms".

Brian did not use those words.

> I've asked you three or four times now to substantiate your
>claims. YOUR claims, Brain...cited word-for-word, repeated by you
>several times.

You've demanded, taken things out of context, edited words
to suit your "charges."

> You "respond" by telling me I am rude and obnoxious.

You are.

> You call ME "bizarre", yet you make outlandish assertions in a
>public forum, then dodge all requests to "prove", at any level, your
>claims.

See? There you go again, coming unglued.

Get someone to help you find better glue. Have someone
tell you that your "commands" don't need to be followed in
here.

Remember that you get all kinds of questions in return that
you never answer? You usually reply by a lot of insults and
other accusations without ever addressing the question.

> I believe you to be a chronic liar. You have been "called" on
>several occassions to back up your assertions, but then use this ruse
>to try and avoid taking responsibility for your own actions.

You believe anyone is a "chronic liar" if they have opinions
contrary to your own.

> Call me rude and obnoxious if you think it deflects attention from
>you, but I can assure you that it does nothing of the sort. If
>anything, childish dodges like this only highlight YOUR bizarre
>behaviour.

In America it is spelled "behavior." Are you in peerage?

You are rude and obnoxious, almost constantly. Saying so
is not bizarre. It is evident to anyone who can read in here.

> The FACTS are that the "unlicensed" services (11 meter CB, FRS,
>MURS and Part 15) provide NOTHING more than an ancilliary function in
>ANY "emergency comms" and you know this to be true.

Only among your circle of acquaintences.

> I certainly do in as much as I am INVOLVED with "emergency comms"
>on SEVERAL levels, not all of which involve the Amateur Radio or CAP.
>Most everyone else in this forum knows these things to be true too.

Name them. The ones not specifically ham or CAP.

> You and Lennie seem to be the only ones in this forum who think
>that if you keep repeating the same lame, untrue "stuff" that it will
>somehow manifest a thread of truth. Sorry...that doesn't work.

Tsk, tsk. You are looking into a mirror again.

You top this anamalous anonymous "JJ" in repeating myths and
cliches, waving self-patriotic bunting around like a suit of armor.

> Now...PLEASE try and exceed my expectations with the next post
>and pony-up some cajones to either admit you are either blatantly
>lying, making wild guesses, or just trolling for the sake of making
>arguments that you obviously can't support.

Oh, my, almost textbook psychosis complete with spicing of
macho sexual terms. "Cojones?" Quien sabe? :-)

> Or REALLY try something new and discuss something you have some
>EXPERIENCE in...THAT would be refreshing.

Go play with your ham radios. That way you could get some fun
out of life instead of coming in here and fighting with anyone who
has independent thought unlike your own. Make the newsgroup a
better place by your absence.

He is trying out for show biz? :-)

Prime rule of this newsgroup: Only PCTAs are allowed to survive as
regulars; NCTAs are shot on sight, but seldom hit. Coslo is PCTA.

First rule after prime: Licensed amateurs are allowed any level of
comment from civil to rude, obnoxious, insulting; unlicensed others
must be respectful, bow their heads to high-test hams, and say Sir
like in the Real service (the military). They can't enforce that and it
makes them outraged and switch to sarcasm and/or pejoratives.

Never consider that they will actually LOOK UP anything you point
out. They are too outraged by unservile behavior to bother with that.

Inhabitants of this din of inequity would rather fight with NCTAs than take any action on Access BPL. They feel their "honor" must be avenged before considering their own HF playground in the near future. Discussion and independent thought is impossible. PCTA regulars have only ONE opinion...theirs...all others are <ptui>.

Just a few observations from the last seven years in here...:-)

I don't think anyone who posts anything about Lennie in what he'd
perceive as a "negative light" is "detract(ing)" anything from him,
Jim.

Leonard H. Anderson is his own worst enemy...His foul mouth and
his arrogant, "I Know Better Than You" personality
more-than-adequately demonstrate the true nature of his "character".

Now...I wonder why Brian Burke can't/won't answer the core
question of this thread, that being where's his validation of his
assertion that "licenseless services" play a "major role" (his choice
of adjectives, not mine...) in "emergency comms".

Even his cellphone operates, ultimately, under a license whether
he realizes it or not.

>NOT!!!!!!

"NOT" is correct, but not for the reasons you assume. Let's break this down into
bites small enough for you to swallow.....

"PART 97--AMATEUR RADIO SERVICE"

That doesn't say "PART 73--RADIO BROADCAST SERVICES", or "PART 20--COMMERCIAL
MOBILE RADIO SERVICES", does it?

"Sec. 97.101"

That should be a good clue that the rule belongs under Part 97.

" (d) No amateur operator...."

Does that say "commercial broadcast station" or "police or fire department base
station"? No. It says "amateur operator".

>Same for any ham radio station.

They are not the same, in case you hadn't noticed. Hams are, by definition, amateurs, which is a definition you should never forget.

I can see from your response that you are unable to answer the standing
question, which is no suprise because there -is no law- excusing hams from
violating 97.101(d) because of 'poor design' of consumer devices. Nor is it
suprising that you are unwilling to admit that fact.

I saw these devices for sale at a hamfest in San Antonio and several
hamfests throughout Florida. Every time I've seen them at hamfests
they were selling them in the boneyard and doing a booming business.
One guy had a trailer and must have had at least a hundred or more
of these devices. He told me he sold out and had more on order
from his suppliers.

Isn't it obvious? In the case you cite, "won't" means "can't".

Why bother with him, Steve?

You know the nature of the responses you will receive, so why spend the time on folks who are not at all serious about amateur radio, or related policy issues? Their hobby is wasting time. Your time.

If you're interested in amateur radio policy matters, there's the BPL NPRM to comment on, plus three restructuring petitions (FAR, ARRL, NCVEC) that will probably get RM numbers soon.

And that is the amateur's attitude to communications. I flipped on
the radio and talked to Costa Rica! Everythings great, I got
Emergency Comms!

> If I need to contact FEMA via HF in another
> state (including IOWA) I think I have proven that it can be done by this
> test. And that, after all, was the purpose to begin with.

I don't. The true measure of a test is the test. As an IG augmentee,
I lay down a card, and Capt Soso reads it and say, "I can do that."

Do I mark down 100% on his say so, or do I say, "So let me see you do
it, Capt Soso."

> > We just love

> Sure we did. The Ham gear is for redundancy.

Sort of. It's there for when your primary and secondary gear doesn't
do what its supposed to do. You still have a mission, and it's not
talking to a ham in Iowa.

That's why we have it. A
> test of it's HF capability was important. Test complete, test successful.

In other words, you tested that the radio worked. You could have done
that with a dummy load and not wasted that Iowa ham's time.

Next time you inadvertantly contact an amateur in another state, ask
him to phone patch you through to that state's EMA or State Police.
That at least would be worth noting.

This is another case of pick 'n choose rules logic. It's a strange little subset of people that try to interpret rules in a different manner than everyone else, or come up with oddball scenarios in which the rules "don't apply" or fail. They are like the neighbors dog that can't resist chasing cars.

Any reasonable person has to take the written rules, and look at what they are intended to do, the spirit of the rules so to speak:

Licensed service equipment has a priority over unlicensed equipment.

Licensed service equipment may at times interfere with unlicensed equipment. Unlicensed equipment does not enjoy this.

Manufacturers should use good manufacturing practices to avoid being interefered with or to interfere with licensed services.

The extension of the spirit of the rules is that the amateur is expected to work with a person that is getting interference from the amateur's equipment, even though the responsibility is the person being interfered with. But if the mitigating work fails, then it is ultimately the part 15 device owners problem. All this assumes a clean signal on the Amateurs side.

All the civil suits posted as eveidence to the contrary are clearly cases where a person has been in violation of some other rules also, such as profanity, and possibly running illegal amplifiers. Almost certainly there was an antagonistic relationship between the two parties in each case also. IIRC, there was a charming "99 bottles of beer" singing as part of the wrongdoing.

The F.C.C. is not going to stand up for a person doing illegal things to begin with.

But there you have it, an extrapolation of a case from the way they really are to "licensed services must not interfere with unlicensed ones."

- Mike KB3EIA -

ps. and we won't be able to convince him otherwise..

How do the civil and military authorities intend to be initially
notified that there is an emergency?

Send a runner?

I always had to carry a pager. Cellular telephones have mostly
replaced pagers.

Frank, That post was an aside. But it is an example of what your interpretative game is doing.

Amateurs are expected by the spirit of the law to help with the mitigation process, which includes ensuring that they have a clean signal, and to work with the person being interfered with.

But they are not required to foot the bill for modifications to the interferees' equipment, and ultimately, if the interferee's equipment is not designed well, the amateur, as well as any licensed service, (police, local emergency services, etc.) is not responsible for the interference.

- Mike KB3EIA -

I agree 100%. The scenarios posted by JJ are an attempt to interpret the ham
rule against causing interference by equating amateur radio with broadcast and
emergency commercial services. This law is so simple and easy to understand it's
pathetic that anyone could possibly misinterpret it's meaning, although some

people must do their best to try.

> Any reasonable person has to take the written rules, and look at what
>they are intended to do, the spirit of the rules so to speak:

Again, I agree 100%:

> Licensed service equipment has a priority over unlicensed equipment.

Absolutely.

> Licensed service equipment may at times interfere with unlicensed
>equipment. Unlicensed equipment does not enjoy this.

True story.

> Manufacturers should use good manufacturing practices to avoid being
>interefered with or to interfere with licensed services.

Yep.

> The extension of the spirit of the rules is that the amateur is
>expected to work with a person that is getting interference from the
>amateur's equipment, even though the responsibility is the person being
>interfered with. But if the mitigating work fails, then it is ultimately
>the part 15 device owners problem. All this assumes a clean signal on
>the Amateurs side.

Wrong-O! Your "spirit of the rules" had several omissions that make this statement absolutely false. First, while licensed services may at times interfere with unlicensed devices, amateurs are not permitted to interfere with radio communications or signals according to 97.101(d). The 'spirit' here is that commercial and broadcast services have priority over amateurs, and when a ham causes interference to a broadcast receiver they are not just interfering with unlicensed equipment, they are in fact interfering with the television or radio signal; i.e, the broadcast transmitter which is -not- an unlicensed device! After all, it takes both a transmitter and a receiver to complete any communication. And while manufacturers are "advised" to design unlicensed equipment to be as RFI-resistant as practical, they are under no legal obligation to do so. This is -not- the case with amateur radio rules, which -specifically- state that causing interference is illegal. Therefore, the legal responsibility for causing interference rests solely with the ham, -not- the manufacturer, and -not- the victim of the ham's interference.

> All the civil suits posted as eveidence to the contrary are clearly
>cases where a person has been in violation of some other rules also,

>to begin with.

Sure they do. They stick up for interference-causing hams all the time. If they didn't they would be overwhelmed with RFI complaints.

> But there you have it, an extrapolation of a case from the way they
>really are to "licensed services must not interfere with unlicensed ones."
>
> - Mike KB3EIA -
>
>ps. and we won't be able to convince him otherwise..

The rule stands on it's own, regardless of whatever warped interpretation you wish to place upon it.

The letter of the law is very, very clear. Invoking the 'spirit' only weakens
your position, as I have outlined in my other reply on the subject.

> But they are not required to foot the bill for modifications to the

I guess this will be another standing question (that will most likely go unanswered as well): What laws mirror 97.101(d) under Parts 20 and 73?

> Emergency Comms!
>
I think you are missing the point here, William. I said that Iowa was the first station that we contacted. You are making a huge presumption here that it is the only station that we contacted. Do you really think that we would contact one station, declare victory, then call it a day? You know better than that. We made multiple contacts during the day as we switched from band to band.

> Next time you inadvertantly contact an amateur in another state, ask
> him to phone patch you through to that state's EMA or State Police.
> That at least would be worth noting.
>
Actually, not a bad idea; however, this was a function test of equipment in preparation for an exercise later this month. When we activate that exercise, we will be contacting those types of agencies directly (including out of state) We didn't want to have to coordinate that contact in advance because it would take away from the realism of the upcoming exercise and give them a "heads up". Part of the exercise is to see how quickly they will respond in a "no warning" situation -- or if they respond at all.

I see them being used by restaurants, especially in large cities.
I saw them in use in New York and LA.

The story doesn't end there. Apparently after booting Green and Booth off the show, Noory had his producers check with the Carmelites of the convent where the nun lives. They were told she is very old and frail and has not had visitors for a long time! Noory discussed all this on Friday nights show.

The whole thing was obviously a scam from the start. Green and Booth had claimed that Sister Lucia had never heard of David Booth or his apocalyptic dreams. They are pandering to the end of the world crowd claiming that 97% of the people on Earth would die this year.

Anyone up for a good tar and feathering?

In article <a237c.195$1n4.26@news02.roc.ny>, "Jim Hampton"
<aa2qa@frontiernet.net> writes:

>If you go back into the 50s and 60s, amateur radio served quite well for
>long-haul phone patches and in emergencies.

Service in emergencies goes back much farther, of course.

>Very localized emergencies,
>such as an auto accident would largely be reported by normal telephone.

Also by hams equipped with mobile rigs if telephone was not immediately
available.. This is documented all the way back to the beginning of mobile
operation by hams. Of course, the number of mobile-equipped hams limited the
chances that there would be a ham in the area when such a localized emergency
happened.

>In
>the 70s, the cb craze took hold and certainly I would expect that cb was
>sometimes used to report the accidents. The small number of amateurs would
>preclude them being involved very often in such a situation.

I disagree on that last point. That same time period was the boom time for
amateur repeaters and autopatching. At least in the areas I'm familiar with,
such service by hams was very common.

>Voilla, cb is
>more important than ham radio.
>
Certainly more numerous in those times. Questionable today, though.

>Fast-forward to today. Cell phones are likely the primary means of
>reporting those accidents. Who needs the hams? Some hams will say "who
>needs cb?"

As long as the cell phones are avaialble, they are obviously the preferred
method because anyone so equipped can push 911 and report directly.

>A lot of folks state that amateur radio isn't a service; it's just a hobby.

That's a roundabout way of saying that a bunch of things.
>
>Few take into account how fragile that infrastructure of cell phones,
>telephones, and internet can be when a large area is affected. That nasty
>ice storm in the North East (was it 1997?)

Yes

I agree 100%!

But some folks deny *any* significant contribution by amateurs.
>
>BTW, during that ice storm, the calls were going out for batteries,
>flashlights, generators, blankets, food, coffee, and mobile amateur
>operators with HF capabilities. If you have nothing working for well over
>100 miles in the N.E. U.S. and Canada, you will likely not get it done on
>VHF/UHF or cb.
>
And during that storm, significant traffic was passed by CW because it was the
only available mode that would get through.

Some more data points from this area (suburban Philadelphia):

- A heavy snowstorm dumped about a foot of snow on the area one day. The
weatherfolk simply messed up, and did not predict anything like what really
happened. While there were no major problems involving loss of life or
property, many vehicles and people were stuck or seriously delayed, including
school buses full of kids. One of the first "casualties" of the storm was cell
phones, which were simply overwhelmed by the enormous volume of calls.

- Hurricane Isabel pounded through here some months ago and left hundreds of
thousands without power, and in some cases telephone service. Some if us were
out for days. The interesting thing about Isabel was that the outages were very
local in nature - one side of the street had power, the other did not, etc.
Some folks lost power *after* the storm because repair crews had to turn off
the power to a larger area to fix downed poles and lines. Cell phone coverage
was better than during the snow storm but unreliable. Again, no major problems
involving loss of life or property, but the cell system capacity was
overwhelmed at times.

Sure. And such behavior is not limited to 5 year olds, either.

Giving such behavior adult attention reeards it, and the result will be more of
the same. That's true whether the behavior is by a 5 year old or someone 14.2
times 5 years old.

RIGHT-O!!! If the ham station is clean, not transmitting excessive
harmonics, spurious emissions, ect., and the device that is being
interfered with, such as a tv experiencing fundemental overload because
it cannot reject out of band signals, or a stereo system that is acting
like a receiver by picking up the signals on the speaker wires, feeding
into some device that is rectifying the signal, ect., the ham is not at
fault and is perfectly within his right to continue operation and the
problem is with the party with the devices that cannot reject the
unwanted signals. The ham *IS NOT* causing illegal interference. This
has happened many times in the past where the FCC has told the party
experiencing the interferenc it is not the fault of ham but the fault of
the equipment being interfered with. It happend to me personally and the
FCC told the lady to eight put up with it or get another TV.
No you go on about how if the ham, now knowning he is causing

interference, that he is now maliciously causing interference and you keep blabbing about the rule against malicious interference and so the ham is illegal. Well not quite. The ham is not maliciously causing interference, when he gets on the air his intent is not to interfer but to simply communicate with other hams, so there is no malicious intent to cause interference. The fact that the devices cannot reject his signals is not his problem. Now if he gets on the air with the intent to cause such interference, then the rule would apply, but to simply excersize his right to communicate on the ham bands according to his license is no way maliciously interfering. If a ham on purpose transmits on top of another licensed signal, that is
You have your head stuck way up your you-know-what to far. Now go blabber this nonsense to the cb crowd but it dosen't fly hear.

>
> Sure they do. They stick up for interference-causing hams all the time. If they
> didn't they would be overwhelmed with RFI complaints.

Because the hams are not maliciously causing interference, they are operating completely within the FCC rules and according to their license. You must be lennyboys twin brother, you both have a hard on for hams.

WRONG-O again!! Talk about skewing the rules to your interpertation.

What Mike said is RIGHT-O!!! If the ham station is clean, not
transmitting excessive harmonics, spurious emissions, ect., and the
device that is being interfered with, such as a tv experiencing
fundemental overload because it cannot reject out of band signals, or a
stereo system that is acting like a receiver by picking up the signals
on the speaker wires, feeding into some device that is rectifying the
signal, ect., the ham is not at fault and is perfectly within his right
to continue operation and the problem is with the party who owns the
devices that cannot reject the unwanted signals. The ham *IS NOT*
causing illegal interference. This has happened many times in the past
where the FCC has told the party experiencing the interferenc it is not
the fault of ham but the fault of the device being interfered with. It
happend to me personally and the FCC told the lady, in no uncertain
terms, to either put up with it or get another TV...period.
No you go on about how if the ham, now knowning he is causing
interference, that he is now maliciously causing interference and you
keep blabbing about the rule against malicious interference and so the
ham is illegal. Well not quite. The ham is not *maliciously* causing
interference, when he gets on the air. There is no *malicious* intent,
his intent is not to interfer but to simply communicate with other hams,
so there is no *malicious intent* to cause interference. The fact that
the devices cannot reject his signals is not the hams problem. Now if he
gets on the air with the *intent* to cause such interference, then the
rule would apply, but to simply excersize his right to communicate on

the ham bands according to his license, when he is not transmitting harmonics or spurious out-of-band signals is in no way *maliciously* interfering.

>
> Sure they do. They stick up for interference-causing hams all the time. If they
> didn't they would be overwhelmed with RFI complaints.

Because the hams are not maliciously causing interference, their intent is not to interfer but to communicate with other hams. They are operating completely within the FCC rules and according to the conditions of their license. You keep blabbing about your interpertation of this rule, well, the FCC who is the final authority does not agree with you so what you claim is exists only in your wild dreams.

You have your head stuck way up your you-know-what to far. Now go blabber this nonsense to the cb crowd but it dosen't fly hear.

There is no law that states that if I am operating my ham station
according to the FCC rules and terms of my license that I must cease
transmitting because some device is picking up my ham signals because it
cannot reject out-of-band signals it is not supposed to pick up. Now
blabber the "malicious" interference thing again. If I continue to get
on the air, I have no "malicious intent" to intefer, my only intent is
to excersize the privledges of my license and communicate with other
hams, I have no "intent" to cause interference to any other service so
there is no malice involved. Because the device cannot reject my signals
is not my problem, and the FCC will agree with me, not you. They have
agreed with me in such a situation in the past.

Just to enlighten you, the radio is not the entire system, the antenna
system needs to be tested also.

Ah...malicious from the inconsiderate, self important cell user or the
blocker. Depends on your view. Seems like the cell users who insist on
annoying people with their inability to turn their phone to 'vibrate' are
the malicious ones.
Ohh ya, you are right - since the cell companies paid millions for those
frequencies, but, striking a balance may take some time.

>How do the civil and military authorities intend to be initially
>notified that there is an emergency?

There are several ways for military authorities to notify military
units. For long-distance notification there are "hard" circuits
which route through very dedicated, few-user systems via
military satellites, fiber-optic lines, copper lines, or microwave
radio relay. The VLF alert system for submarines is one such,
not using any morse code but rather encrypted data means.
The USAF has its own network as does the USN and USA.

Lower-level alerts can be issued through the DSN or Digital
Switched Network, in clear or encrypted, voice or data, to most
parts of the world where fixed or semi-fixed bases exist. Most
of the operation and maintenance of the DSN is done by USAF
and USA Signal units. DSN is a combination of plain old
telephone system (POTS in the unofficial acronym) and an
Internet-like data exchange. DSN is what fiction author Tom
Clancy calls "the invisible second telephone system." In that
regard the label is very close to the truth except that it is not
"invisible" on any military base or larger government installations.
Older DSN number directories appear on the civilian Internet
and DSN contact numbers are published openly on military and
government websites. DSN telephones and terminals can call
out to the commercial-civil telephone system with setup
authorization and firmware authenticators but the reverse is
seldom implemented.

NORAD has its own hardened system tied to many and
varied sensors, plus the DSN, as a specific example. Details
on the North American Defense Command are sensitive.

For civilian notification there are many and varied means,
beginning with the commercial-civil telephone infrastructure.
Beyond that is a very large assortment of communications
capabilities that varies with the urban complex arrangement
and local government organization. The fire departments of
the Greater Los Angeles area (all 24/7 professionals) have
dedicated circuits bypassing switch centers to each fire
house carrying alarm signals, voice, and some data to back
up voice sent as primary mode (time, destination, etc.).
Police departments in this Greater LA area also have
dedicated circuits not passing through telephone switch
centers, are not blocked by sudden telephone use.
>
>Send a runner?

In the military that is still the final back-up "system." :-)

A form of this, ususally via land vehicle, has been done in
civilian sections. In the Northridge Earthquake here ten years
ago, utility companies had to send company cars to workers'
homes located in areas of severe damage since the POTS
lines were damaged; many off-duty utility workers were needed
for a quick, massive repair task of restoring utilities. A few
police cars aided in such "runner" duty. Notification that an
earthquake had occurred was NOT needed, however. :-)

Public safety vehicles equipped with PA (all police patrol cars
in this area, the PA also being the siren) are useable as wide-
area, mass notification. Most fire department engines also have
PA facilities onboard. That was done in 1971 in the San
Fernando Valley of Los Angeles after the Sylmar quake to warn
residents in the "downhill" side of the Van Norman Reservoir
to evacuate; officials feared the three earthen-wall reservoirs
might be breached by aftershocks and inundate a large area.

The old, "classical" means of widespread notification through
broadcast stations is still done. Both civil airways FAA centers
and USCG plus Harbor Control bases have done announcements
to all aircraft in the vicinity or all watercraft in the harbor area.
There are several private communications networks of larger
corporations here which can be used for alerting distant
locations of their installations and have done so in the past.
As an example, Rocketdyne Division of Rockwell International
had several kinds of links to the Santa Susanna Field
Laboratories (mostly for test telemetry) as well as to Atomics
International (plant a few miles away plus labs also at Santa
Susanna).

>I always had to carry a pager. Cellular telephones have mostly
>replaced pagers.

That depends on the local area. Here there is a mixture of both
plus private/commercial paging services. Pager base stations
are relatively narrowband and semi-automated, are relatively easy
to equip with uninterruptible power supplies. Those are quite
common in larger companies that have employees who must
normally work in many areas of a building complex.

Teledyne Electronics in Newbury Park, CA, was (still is,
presumably) rather far northwest along Highway 101 and had
capability to tie into the beginning of the big Condor Net in
1977-1978 on the 222 MHz ham band. Ostensibly that was
for "fire (brush firestorms) safety of the company" but the two
hams (John Memmen, manager, Harry Terraneau, Sr. Tech)
really had "other" uses for the several HTs. :-) That Net
had non-computer tone signalling and switching-routing, still
does. Harry had at least one HT on-charge with the receiver
open some of the time.

HTs in PDs and utilities are quite numerous and some of those
have varied alerting means such as tone signalling or actual data
sent over mobile terminals. The LAPD here has an "extension"
of patrol car radios in the personal body-worn HT with combination
speaker-mike sometimes clipped near the collar. Many LAPD
patrol cars carry data terminals for long, detailed announcements.
Usually used in ID of vehicles and drivers, those are useful for any
information that needs to be kept handy for referral.

Back a few decades when RCA Corporation was still in existance,
they had dedicated corporate lines locally tying four local RCA
complexes, one of them NBC western headquarters in Burbank.
Those were used for Teletype and a special PBX tie-in to the
telephone system for communications with RCA locations in the
eastern USA. Since RCA was also under contract to Bank of
America for data handling, they also had dedicated lines to San
Francisco B of A Hq. "Dedicated" lines do not pass through the
switch centers of POTS. That was in 1975 and some time in the
past but other corporations of today have extensive private
network facilities that are all useful for notification in real
emergencies. The General Motors assembly plant (last used
for Camaros and Firebirds) in the middle of Van Nuys, CA, had
its own network to component assembly plants elsewhere in order
to expedite manufacturing logistics. [closure by GM was due to
other economic reasons, nothing to do with communications, the
location is now a new mall area referred to as "the plant" - :-)]

The number and variety of communications means, all useful in
an emergency of today is large and extensive. Details of the
civilian side of it can be discovered by anyone who cares to look.
The Auxilliary Communications Service (ACS) of the California
state Office of Emergency Services takes that into account as

does the OES itself. Any and all means of communications that survive the onset of any emergency are all useful.

That's unfortunate. All of the "communications" in this newsgroup
have become a battleground of personal egos of the regulars. Many
come unglued at the slightest hint of disagreement with their
postings.

Any time an actual subject of "amateur radio policy" comes up, the
ones with personal opinions MUST be taken as the ultimate truth
of the matter. Anyone with different ideas are damned and persons
insulted for not agreeing with them. It's a constant verbal firefight
with large depots of outrage ammunition fired at will (and any other
name). Then they become oh-so-badly "wounded" when subjected
to return fire. Some remain "wounded" for years and constantly
butt in to seek retribution. The subjects are long lost in the mis-
direction of satisfying their personal vengence.

It sure as heck is no recruiting station for support or growth of
amateur radio. Maybe for the WWF? :-)

Of course. SHARES uses CW all the time? Military HF radio?

Back a half century ago, the ACAN used SSB on a 24/7 basis as
primary mode of long-distance communications..."long" as in
500 to 8000 miles over water or land.

>We
>couldn't reach squat on SSB that day. Next test might show an improvement

You really ought to consult with Army Signal Corps folks on how
to do SSB on HF from true emergency condition locations. Ask
for "Nevis." :-)

Signal Corps has some neat portable-mobile-fixed relatively low-
power HF radios that Get Through on SSB. Hughes Aircraft
(Ground division) designed and made some of it in the 1980s.
You can really "fly" with some of that. :-)

Fort Gordon, GA. They're in the DSN directory. They're on the
Internet. Signal Corps center. Good smarts there.

>> Riiight...you got it through the bureaocracy. :-)
>>

Tsk, tsk, tsk...still using pejoratives to open a message?

>"You are now working in the electronics industry too? Amazing."
>_____
>
>What? The amazing Leonard not familiar with current technology?

I'm familiar with current...and voltage...and lots of things in the
whole field of electronics (radio is a part of that whole). But,
electronics technology keeps advancing. I'm still learning and
I started learning about it 57 years ago.

I can measure current in many and different ways, including
non-intrusive means at DC, AC, and RF. Do you wish to know
more about current? Please consult an electronics text or the
application notes of some electronics instrument manufacturers.

>I'm shocked.

Safety first...use proper precautions around live conductors.

Do not let your train of thought become derailed.

>You mean to tell me that this lowly Amateur Radio Op knows more
>about cutting edge technology than the Wizard of Electronics?

I'm not a "wizard" nor have I claimed to be. After retiring (only from
regular hours of work) from a career as an electronics design
engineer, I've accumulated some amount of knowledge and
experience in several disciplines of electronics. I'm still learning
and working and designing and not afraid of jumping into venues
populated (as this one) by a number of egocentric amateurs with
delusions of expertise, trying to put down others who have the
actual experience and knowledge. Your sarcasm (with overtones
of spite if not spittle) is noted.

>Say it ain't so, Leonard.

I am trying to discuss subjects in here, not personalities. People
like yourself don't want to do that, are intent on promoting only
themselves and their alleged expertise in communications.

This particular thread was another's egoboo challenge about some
NCVEC petition (actually two of them, the second only a plan).
To be gracious and civil, you could have at least recognized that.
Instead, you started in with your first public posting in here after a
long absence as nothing but a direct personal attack on myself.

If you wish to do nothing but make personal attacks, you are free
to start other threads with nothing but personal condemnation of
whomever you choose to target. This newsgroup is open to all and
not moderated; not moderated except in the minds of some PCTAs.

The immediate future for U.S. amateur radio is some kind of change
in licensing regulations which may or may not eliminate the
International Morse Code test from examinations. That immediate
future also has the spectre of wide-range, wide-bandwidth noise
on most of HF through low VHF from Access BPL. In essence,
Access BPL implementation may cause EVERYONE's HF through
low VHF receiver to kiss their sensitivity ratings goodbye...the QRM
may prohibit any sort of low-level reception by anyone in an urban
or suburban location.

If you wish to continue personal attacks on individuals just to ease
your perceived past woundings in this newsgroup, go ahead. Such
seems petty and vindictive on your part.

There's a very distinct possibility of an emergency in radio reception
quality of the future that isn't coming from overt attackers on the US
or any terrorists wanting any religious jihad or any imaginary threats
to Homeland Security. It exists in the homeland itself.

It is more constructive to fight against threats as a concerted group
instead of playing verbal paintball of individual on individual for petty
personal reasons. Your choice.

>personal swipes at the folks commementing here...!??!

I already have, re the 11 Sep 01 Attack on America, in specific the partial destruction of both the Manhattan Emergency Communication Center and part of the telephone trunk lines adjacent to the WTC towers. Regardless, the entire telephone system (cellular telephone included) of the borough of Manhattan was NOT shut down.

At the Pentagon in Washington, DC, the third hijacked aircraft crash did not disrupt any cellular telephone system in DC. The crash did inflict great damage to one-fifth of the Pentagon along with much loss of life, but the architecture of the Pentagon is low relative to the WTC towers and personal escape routes are much shorter for near-crash-site inhabitants. The Pentagon's internal fire and damage control network (installed the year before) worked well from a planned alternate control point to shut off utilities and thus restrain any further spread of fire damage. Such a system was not possible in the WTC towers when the entire structure was put at overstress.

All of the above information has been widely published in the popular press. So too are general informations about the telephone infra-structure with associated cellular telephone service -

Telephone circuits for conventional subscription service route through switch centers. Switch centers permit a subscriber to "dial" direct to any other telephone; several centers are involved in "dialings" out-side of area codes or to other countries. Switching is limited by economic factors to a fraction of the maximum possible subscriber base, somewhere just less than ten percent for older, obsolete electromechanical switching; maximum may be larger in ESS or Electronic Switching System central offices. Ergo, all subscribers cannot be on-line at the same time; switch centers refuse to accept off-hook (handset lifted or cell phone On/Talk) subscribers on exceedance of maximum numbers. Reaching exceedance of maximums does not cause an ESS to fail; normal operation returns automatically when fewer subscribers access the system. Telephone central offices have had emergency electrical power facilities since before WW2 in the USA; such emergency power is not limitless in operating time and is, like switch traffic capacity, governed by

economics in normal operation.

In the old "Bell System" monopoly (a most generous one despite the complaints and government actions for so long), the technical excellence and robustness of the U.S. telephone infrastructure was exceptional - and known worldwide. Cellular sites for the cellular telephone service are themselves small extensions of each central office complex. Running (usually) unattended, they also have emergency electrical power backup. Again, like the central office, such emergency electrical power capacity and life is limited by economic factors of normal use. As Phil Kane pointed out, the deregulation of the U.S. telephone system resulted in several local telephone companies downgrading capacity and service of certain types of emergency power, particularly at cell sites. Cellular telephone service arrived after the big telephone deregulation so there is no example of comparison as to what it might have been had the old Bell System remained a virtual monopoly.

NO structure is immune to physical damage whether from fire or ice-accumulation or collision. That includes both governmental structures as well as individual amateur radio station locations. In general, the government structures are designed to be more robust than residences so, on the whole, they can withstand more environmental abuse. In the old Bell System, most equipment, including overhead cables was designed, made, and installed for a minimum working life of two decades. Some things for longer. Such telephone life expectancy has been proven in-use several times over. This does not apply to subscriber terminal equipment which can be (optionally after deregulation) of consumer electronics quality. However, the state of the art of solid-state electronic devices has increased the mean time between failure rates of complex consumer electronics devices...it is no longer possible to judge electronics devices' life merely by physical appearance to the naked eye.

Cell sites service areas are located and designed to overlap adjacent cells. The amount of overlap depends on decisions in intial location plus uncontrollable changes in structures and, sometimes, rarely, in earth moving within a service area. Cellular service is not guaranteed to be perfect as in wireline telephony but it is quite good considering the frequency (1 GHz) and quite low power of a cell handset. Those handsets are basically little two-way radios. Just the same, their usefulness in normal life has been proven to the extent that more than 100 million cellular service subscriptions had been taken out by users in 2003 according to the Census Bureau's interim report of early 2004. That is approximately one cell phone per every three citizens.

Depending on a particular telephone company, cell sites can be arranged to automatically change over to link with a different

central office or to connect with their main through microwave radio relay (some are linked only by microwave). There is no set rule on that and it is dependent on the local telephone company. As it is, they are quite reliable, almost to the extent of the wireline POTS (Plain Old Telephone System). Reliability of cell handsets is left up to individual subscribers.

All in all, the amazing growth of cellular telephony in the last quarter century is phenomenal, especially considering the operating frequency (low L-Band) and the cost reduction, typically below that of an amateur average HT. It is not a perfect solution to emergency communications but it is used daily throughout the USA for many and varied small emergencies. To discount it or sneer at its usefulness is folly.

>> Was anyone knocking the state of New York? (or New Yourk?)
>>
>> I don't think so.
>
> You have. You've "knocked" everything west of the Owens Valley.

No. I've tried to point out that the population of the United States also exists in the western states. The center of population has been steadily moving westward since 1790 (then somewhere in Maryland) and in 1990 was located 9.7 miles NW of Steelville, Missouri (source: U.S. Census Bureau). That point is west of the Mississippi river.

I tend to promote California, yes, for several reasons: It is the most populous state of the Union as well as being in the top 10 for land area (size is 9/10ths that of Sweden and full auto trip north-south takes two 7-hour driving days to complete); this state has an operating budget larger than many foreign countries and is dynamic in commerce and trade as the main U.S. gateway to Asia for that; the major aircraft and solid-state electronics corporations started here and most prospered (see Lockheed, North American, Ryan, Douglas, Vultee, Northrup complexes here plus the "Silicon Valley" and Hewlett-Packard and Intel for electronics).

> You wouldn't help your wife by passing in a roll of toilet paper,
>Lennie.
>
> Putz.

Is being insulting, rude, obnoxious, and resorting to toilet humor considerd "civil amateur behavior?" Certainly not, yet you seem to do nothing else in here.

My goodness! Snoory gets a spine!
My impression has been that since he took over he's been afraid to rock the boat by thoroughly interviewing any guest, lest some of the credulous listeners be lost. Meanwhile Art, appearing on the weekend and with nothing to lose anymore, dared to actually call into question some of the nonsense. Now it's Snoory too!
That show could really be fun if some of those money-grubbing liars who appear on it were asked a few probing questions from time to time.

Leonard

Presumption? Perhaps.

If I dial home, and I get Iowa, then my comms failed.

You need to have a goal before you ever switch the radio on.

Let's say that your goal is the Military Police desk at Ft. Riley,
Kansas.

You get on the radio and "Viola," you got Iowa. Great. Good first
step. Ask that Iowa amateur to dial the Military Police desk at Ft.
Riley, Kansas (333-444-5555). Hmmmmm, who's gonna pay the $0.07/per
minute charges? Iowa ham won't do it. Iowa was a failure. Try
Nebraska if prop holds.

Make up your own scenario. Don't count off this ex-IG augmentee to
create your exercise scenario for you.

OK, you are going to contact the EMA and State Police *_directly_*
with amateur radio? Cool. How are you going to do that?

> We didn't want to have to coordinate that contact in advance
> because it would take away from the realism of the upcoming exercise and
> give them a "heads up".

Right. No prior coordination. But...

> Part of the exercise is to see how quickly they
> will respond in a "no warning" situation -- or if they respond at all.

No.

1. You state a requirement for them (your ham volunteers) to be able
to do such things. Your MOU is a place to state broad requirements.
The SOP or Instructions cover the specifics.

2. You train them to do such things.

3. You then give them a no warning exercise scenario where they have
to do what they (1) have a requirement to do, and (2) have been
trained to do.

That is how it's done in the military. Really.

Does your military installation have a MARS base support team?

> > Which model HF radio did you get?
>
> Kenwood TS 570D(s) and

Excellent choices. Simple and capable.

Probing questions won't happen to entertaining guests, no matter how
fraudulent they may be. Booth got every break imaginable from Noory,
including Noory's frequent repetition of Booth's claims about his "O'hare
crash vision" and the interview with the Fatima witness. But Booth
continued to evade Noory's softball questions.

Uri Geller will be next Thursday night's guest. Let's see how long Noory's
integrity attack lasts.

"William" wrote in part ...

If I dial home, and I get Iowa, then my comms failed. You need to have a goal before you ever switch the radio on.

Our goal was to check the functionality of the HF gear. We made multiple contacts on multiple bands -- making contacts throughout the day. Those were the parameters of the test. Test successful. We have written MOAs with the stations that we intend to contact during the exercise, so they completely understand the nature of the "no-warning" scenario. We also ran functionality tests on the VTC/SAT and VOIP equipment. It was a busy day.

As you know, all major exercises have an extensive OPORD that directs us before anything begins. Ours has been in place for months. All T's crossed.

> Does your military installation have a MARS base support team?

We do not use MARS for multiple reasons. All of our ops are civil service and FCC Licensed Hams. This gives us much greater latitude in the equipment, modes, and frequencies available to us. The EM operation is a completely civilian one. Sorry if I didn't make that clear before. Of course, we had to clear the frequency use with the folks at the installation DOIM, but that was just a formality.

More toilet humor, Phil? :-)

Where do you think "this part of L.A." actually is? It is far from Brentwood or Beverly Hills. Try Zip code 91352.

So, while your attention is here, why does the FCC have TWO docket places for NPRM 04-29...04-29 and 04-37? How come the comments on 03-104 have Sunshine notices only for the period 6 Feb through 20 Feb. All the FCC feeds me is boiler-plate Q&A files. Maybe you can shed some light on that?

Just to enlighten you, the radio is not the entire system, the antenna system needs to be tested also.

I was going to mention that, JJ. But I think William probably realized that after he wrote his response. This was not just a check of the "HF radio" but of the entire EM comms system. Our MICP is run by a gas generator, and part of the test was to see if we could run "all" of our equipment at the same time without a drop in available regulated power. Test successful there as well.

So, bottom line is that you do NOT know what I am talking about. I guess this accounts for your reclama that you are still learning. As to actual experience -- in this area, I obviously have more than you. But I'm sure you would never be able to bring yourself to the point of admitting that. After all, you are the GREAT Leonard. Master of the 1950s "current".

I think this may be the confusion here also. A cell phone is great for localized small-scale problems. If everyone has one, then of course they will be great for calling 911. An accident happens and likely the next person ther will have a cell phone. One of the best reasons for having one of the otherwise evil little devices.

As the scale of problems gets bigger, then they become of less use, their usefulness being inversely proportional to the scale of the problem.

Eventually, the cellular concept falls apart because of the massive support structure needed for the instruments use, and that often the same disasters that make emergency comms necessary take out that infrastucture.

I recall the pictures from the wildfires in San Diego last year showing people trying to use their cell phones without success. The look on many faces was one of surprise that the things weren't working.

Interesting but you need to elaborate and clarify. Did Noory flat out
state that Booth did not meet with Sister Lucia? Also, your sentence
"Green and Booth had claimed that Sister Lucia had never heard of
David Booth or his apocalyptic dreams" doesn't make sense in context.
If she never heard of him how could she request a visit from him? Why
would Booth make that claim? It would undermine his claim that the
meeting took place. Clarify please.

Noory stated that the morning after the show his producers called
the convent and were told that Sister Lucia had not had any
visitors.

Probably what made him and the producers suspicious was the
strange claim that the last Fatima nun, Sister Lucia would call
Booth to come meet with her when she had never heard of booth or
his dreams 25 years ago of a plane crash. You are correct, that
makes no sense.

Noory threw plenty of softballs to Booth, but even with Noory's
help his story didn't make sense. Booth and Green had nothing to
say except promote book sales and they were booted and Noory said
that neither would be welcome on C2C again.

That's all I know since that's all Noory said on Friday's show.

You are licensed. The FCC says so.

You may have equipment. Anyone can buy it.

From the nature of the posts you have made ehre, I doubt that any training
you have had has been anything anyone would call "adequate".

>I am available should the need arise.

I will go to bed comforted tonight knowing you're out there, Brain.

>I do not discredit amateur radio's usefulness in such times.

That is not the truth. You've made grossly disparaging remarks in this
forum on several occassions.

>Yet you greatly discredit the impact that cellular telephones have
>made on emergency communications.

The point remains: The "emergency agencies" continue to make plans for the use of Amateur Radio to help provide communication needs in the advent of loss of regular telephony services...Not to use telephony if Amateur Radio fails.

I just spent my weekend sitting in the TEMA/FEMA EOC in Nashville

All I can say is...WHEW!

I know Brainless and Lennie will discount any likelyhood of my
objectivity, however I was impressed with TEMA's communications facilities.

Yes, the FEMA folks each carry a cellphone with them. There are NO
seperate cellphone facilities in the EOC, however.

The EOC has the capability of accessing any frequency from 1.8MHz to 2GHz
in a plethora of modes, secure and unsecure, to include military if necessary.
Many commercial assets can be accessed if required. Off-site remotes are
situated with almost all of the same capabilites in case of an attack or other
loss of use of the prime EOC.

There is a dedicated Amateur Radio packet station, HF station, two V/UHF
operating positions and third UHF position dedicated to the MTEARS net (Middle
Tennessee Emergency Amateur Radio Service) which is directly tied to NOAA and
carries the bulk of SKYWARN traffic in western and middle Tennessee.

Thier own HF facilites include operating positions for SHARES, FEMA's own
nets,

A dedicated position for CAP (Civil Air Patrol) is being added to "the
pit". Communications assets for CAP will eventually include HF, VHF,
air-to-ground, and a digital imaging site for the HSI (Hyper Spectral Imaging)
package CAP aircraft are being equipped with, as well as VHF slow scan video.

With the exception of two "cordless" telephones, a handful of TV remotes, and three ISR (Intra Squad Radios, the federal version of FRS) HT's used to talk to the guard shack and garage, there are NO "unlicensed" devices on the facility. (The only "major" role the ISR radios might play is if they are used by a commissioned O-4 in the Armed Forces.)

Speaking of "TV remotes", this place would put a lot of those "every channel of sports" sports bars to shame! They even had channels dedicated to foreign news services running.

When I asked about "CB" radio or "GMRS", I was told that there were no plans to use either, that there was not even a usable GMRS repeater in the area. Any REACT group that presented itself would be "tasked under the ARES EC, however we would not allow anyone coming here on the heels of something major to try an wiggle in to an existing plan. We've pretty well got our plans in place, and there's NO plan for CB radio.

The gentleman that I spent most of these two days with is a member of the board of APCO, or Association of Public-safety Communications Officials, so I think I can reasonably assume him to be a bit more knowledgeable than certain posters in this forum on the subject of "emergency comms"...

JJ...please take CAREEFUL note.

YOU were talking about disaster preparedness, those sets of plans in place by your local or state EMA, FEMA, etc. And in the overall scheme of things, you (and I) are correct.

Brain, on the other hand, having been UNABLE to successfully argue against the value of Amateur Radio in those plans, has shifted his definition of "emergency comms" to those of STRICTLY "the average citizen".

In the very narrow slice of "emergency comms" that Brian the Brainless has wedged himself into, yes, John Q Public is going to whip out the old cellphone and call 9-1-1 to get a cop, report a fire, or request EMS for an accident or medical emergency...Just like he would have dialed a payphone 5 years ago.

In a true "disaster preparedness" mode, cellphones may suffer all of the bad things that you and I have said they will.

THAT assertion is made upon the evidence that such incidents have ALREADY HAPPENED, and those occurences have been sufficient to impress the REAL "emergency comms" planners to continue to incorporate Amateur Radio in a wide range of plans.

This is not "urban legend" or based upon some " feel good news release of the ARRL" as Lennie the Loser would have us believe. Real, front-page news stuff. Sorry he won't admit it, but that only helps to substantiate MY claims about his "superior intellect".

>Twisty when he says that radio piracy is an "essential freedom".

No, you misunderstood me. I'm not saying that radio operation is a
civil right. Rather I was reflecting on your attitude that since
consumers outnumber hams by 3000:1, that hams don't deserve
consideration. I was then drawing a comparison to those who opposed
civil rights based on the notion that the people calling for those
changes were only a small minority.

>>>And legally, if a ham knows he is interfering with a radio or television signal,
>>>or even a cordless phone, it is the HAM who is at fault....
>>
>>Not if his station is clean.
>
>
>Where in the rules, or any part of the code, does it say anything like that?

Nowhere. But nowhere in the rules does it specify otherwise, and the
implication is that the ham is responsible for HIS station, not
everyone else's receivers.

>>>97.101(d) "No amateur operator shall willfully or maliciously interfere with or
>>>cause interference to any radio communication or signal."
>>
>>That does not apply to RFI, it applies to on-channel stations.
>
>
>Again, where does it say that?

Nowhere does it say that it applies to RFI either.

You are asking me to prove a negative. As a general rule, that which
is not expressly prohibited, is automatically assumed to be permitted.

But you might wish to consider this:

ï¿½97.121 Restricted operation.

(a) "If the operation of an amateur station causes general
interference to the reception of transmissions from stations operating
in the domestic broadcast service when receivers of good engineering
design, including adequate selectivity characteristics, are used to
receive such transmissions, and this fact is made known to the amateur
station licensee, the amateur station shall not be operated during the
hours from 8 p.m. to 10:30 p.m., local time, and on Sunday for the
additional period from 10:30 a.m. until 1 p.m., local time, upon the
frequency or frequencies used when the interference is created".

The FCC recognizes the interference potential which can arise from
these cases, and has legislation in place to address this. But the
caveat is that the receivers must be deemed as "good engineering
design". So in other words, the FCC has stated (paraphrasing) that if
the radio or TV is junk, all bets are off.

(b)" In general, such steps as may be necessary to minimize
interference to stations operating in other services may be required
after investigation by the FCC".

So until that time, a radio station (such as yours) has no authority
to do anything other than report the problem. The FCC will take any
action that they feel is appropriate. If the amateur station can
demonstrate, to the satisfaction of the FCC, that they've taken the
necessary steps to minimize the problem, the FCC will usually impose
no mandatory restrictions.

>> IOW no

>>broadcast stations, stations with secondary authorization, or other
>>hams etc.
>
>
>Where did you find that in the rules? I can't find that anywhere. Got a link or
>citation?

It's implied. If you were a ham, you'd understand the purpose of the
rules.

>>>Notice that it doesn't exempt Part 15 devices or Sony televisions, it doesn't
>>>release the ham of responsibility just because he tried and failed to prevent

>>off the air, as a result of RFI complaints.
>
>
>Hardly! There are PLENTY of hams, probably the vast majority of them, that don't
>cause interference.

I would be willing to make a gentleman's bet with you that the vast
majority of HF operating hams, who live in a fairly dense (suburban or
municipal) population area, will cause some sort of RFI interference
to at least one neighbor. The sheer volume of poorly designed consumer
junk pretty much assures it.

>This is pointless. You can make all the excuses you want.

The facts are hardly excuses. The facts are that most ham stations are
not being forced off the air for RFI issues. The FCC tends to side
with hams on all but the most uncooperative and belligerent cases.

> Our station will
>continue to put the kybosh on uncooperative radio operators that cause
>interference to our signal, regardless of whether they are licensed or not, and
>we are well within our legal rights to do so.

You have no power to shut down anyone. You can only report them to the
FCC, and wait until THEY investigate, if and when they choose to.

>Maybe someday a broadcast station
>in your locality will take the same course of action as us. And maybe they won't
>be so nice about it. Like it or not, that's the way it is.

I would welcome the challenge. As GWB is fond of saying "Bring it on!"
I won't be so nice either..... And I have the equipment and the
expertise to back it up, as well as a pool of experienced
communications lawyers who I can tap for guidance.

You can convince me by citing any law that exempts a ham from a violation of
97.101(d) when the interference is to a device of 'poor design'.

Well?

JJ...you'll have to forgive Lennie...He get's caught up in his own
rantings from time to time.

Even the 11 meter allocation was "officially" called the "Citizen's Radio
Service". The term "Citizen's Band" came much later.

Yes, "CB" generally refers to the 11 meter allocation, however Class D CB
>>IS<< afterall, just one subpart of Part 95. >>>Your emergency plan scenario
that you are acting out this weekend is

Not in all cases, of course, but enough of them that the Big Dogs of
"emergency comms" plan for it's demise and have plans ready to implement in
case it happens.

It just eats away at Lennie and Brain's rants that those plans include
Amateur Radio to the degree that they do. No problem...Just makes them look
that much more foolish.

As if they NEEDED to look more foolish!

>
>
>Once again, where in the rules is that opinion incorporated so as to vindicate a
>ham from violating 97.101(d)?

This one:

ï¿½97.121 Restricted operation.
(a) If the operation of an amateur station causes general interference
to the reception of transmissions from stations operating in the
domestic broadcast service when receivers of good engineering design,
including adequate selectivity characteristics, are used to receive
such transmissions, and this fact is made known to the amateur station
licensee, the amateur station shall not be operated during the hours
from 8 p.m. to 10:30 p.m., local time, and on Sunday for the
additional period from 10:30 a.m. until 1 p.m., local time, upon the
frequency or frequencies used when the interference is created.

(b) In general, such steps as may be necessary to minimize
interference to stations operating in other services may be required
after investigation by the FCC.

The FCC has stipulated the conditions which would require that a ham
stop transmitting. Unless these conditions are met, the ham is not
required to do anything other than to make sure that his own station
is clean.

> hours after the Attack on the WTC.

However Amateur Radio DID play a "major role" in the following DAYS of post-incident recovery.

Not even the most 'diehard' Amateur Radio supporter suggests that Amateur Radio is the "primary" source of emergency communications unless a ham just happens to be "in the middle" of it and uses a radio to "call it in".

That HAS happened and CONTINUES to happen on a fairly regular basis., especially wilderness areas that have more trees than cellsites.

>>Which one, I have several, what are the odds they are all down at the
>>same time? How many cell phones do you have?
>
> Since neither you nor your equipment is identified and we don't
> know the working status of your "several" radios, the above is
> just a brag claim of no intrinsic value.

Just as are YOUR numerous claims of having some sort of "monitoring station" set up at home. Beyond a cordless telephone, TV, and TV remote, I seriously doubt you to have anything capable of converting RF to AF.

I am far more likely to accept JJ's claims than yours. Especially since I've enver seen him post anything that can be called anything even close to untrue.

YOU, on the otherhand, are a bit on the "prolific" side of mistruthful.......

>>As far as using the cell network for official emergency comms, you can
>>consider it not working. In times of a major emergency it becomes

>>useless for anything but attempting to make a call.

> by conventional means. Tornados are more sudden but allow hours
> of preparation from first sighting. Storm and flood conditions allow
> hours to days of preparation, again using conventional
> communications to effect that.

Two major points:

NOAA, despite tons and tons of technology, STILL depends on hundreds of Amateur Radio volunteers in it's SKYWARN program to provide real-time reports to it's centers...To the point of spending a LOT of money to train Amateur volunteers and to deploy facilities cap[able of communicating with them, both on HF, V/UHF, and digital modes.

> There is no reported evidence of amateur radio ever stopping an
> earthquake, hurricane, tornado, flood, storm, or aircraft hijacking.

No, there's not.

However there ARE tons of articles on how Amateur Radio has been part-and-parcel of the recovery phases of ALL of those various senarios...

Now THAT we CAN'T.

There have already been a half dozen recriminating "inquests" as to why
various communications failures occured with FDNY, NYPD, PAPF, EMS and othr
agencies.

THAT has been reported in "USA Today" and other nationwide media sources.

>>If they are licensed hams they might have. Why would they if they were

>>officials to be of use, they do consider ham radio.
>

> "Officials" who have already been through emergencies of many kinds
> consider and plan for ANY kind of communications in ANY kind of
> emergency or disaster situation.

Yep.

And almost every plan from the Department of Defense on down to "Podunk
Hollow USA" have some provision for including (or at least considering)
implementing Amateur Radio as a recourse.

> A case in point is the "other" "9/11" Attack on the Pentagon in DC....(Snip
to....)
> After crash fire control and search and rescue was coordinated by on-

No "epithets' , damning or otherwise being directed here, Lennie.

Your personal marionette made a claim that the "unlicensed" services play
a "major role" (his adjectives, not mine) in "emergency comms".

I've asked him repeatedly to validate his claims with SOME form of proof.
He has failed to do so.

No proof = intentional mistruth.

>>
>>
>>Where in the rules, or any part of the code, does it say anything like that?
>
>Nowhere. But nowhere in the rules does it specify otherwise,

Yes it does. 97.101(d).

> and the
>implication is that the ham is responsible for HIS station, not
>everyone else's receivers.

The ham is responsible for his station. He is not responsible for anyone else's receiver. But he -IS- responsible for any -interference- he causes to anyone else's receiver.

>>>>97.101(d) "No amateur operator shall willfully or maliciously interfere with or
>>>>cause interference to any radio communication or signal."
>>>
>>>That does not apply to RFI, it applies to on-channel stations.
>>
>>
>>Again, where does it say that?
>
>Nowhere does it say that it applies to RFI either.

RFI = Radio Frequency Interference

>You are asking me to prove a negative. As a general rule, that which
>is not expressly prohibited, is automatically assumed to be permitted.

But it -IS- prohibited, and it is -EXPRESSLY- prohibited!!!

>But you might wish to consider this:
>
>ï¿½97.121 Restricted operation.
>
>(a) "If the operation of an amateur station causes general
>interference to the reception of transmissions from stations operating
>in the domestic broadcast service when receivers of good engineering
>design, including adequate selectivity characteristics, are used to
>receive such transmissions, and this fact is made known to the amateur
>station licensee, the amateur station shall not be operated during the
>hours from 8 p.m. to 10:30 p.m., local time, and on Sunday for the
>additional period from 10:30 a.m. until 1 p.m., local time, upon the
>frequency or frequencies used when the interference is created".

The problem here is that the ham can simply declare the receiver to be of 'poor design' and work the protected hours anyway, which is exactly what happens. IOW, the rule is far to subjective for it to ever be enforced -- in fact, it isn't enforced at all by the FCC. Also, 97.121 does not exempt a ham from a violation of 97.101(d) because, even in a best-case scenario, the former can be considered to be in conflict with the latter. However the rule -does- reflect the priority that broadcast services have over the amateur service.

>The FCC recognizes the interference potential which can arise from
>these cases, and has legislation in place to address this. But the
>caveat is that the receivers must be deemed as "good engineering
>design". So in other words, the FCC has stated (paraphrasing) that if
>the radio or TV is junk, all bets are off.

The FCC has no specifications or minimum requirements for the engineering quality of any broadcast receiver. So who makes the determination as to which receiver is 'junk' and which one is not? The ham? That's like letting the defendant of a murder trial decide what can or can't be submitted as evidence!

>(b)" In general, such steps as may be necessary to minimize
>interference to stations operating in other services may be required
>after investigation by the FCC".
>
>So until that time, a radio station (such as yours) has no authority
>to do anything other than report the problem. The FCC will take any
>action that they feel is appropriate. If the amateur station can
>demonstrate, to the satisfaction of the FCC, that they've taken the
>necessary steps to minimize the problem, the FCC will usually impose
>no mandatory restrictions.

In most cases we have worked with the ham (and some keyclowns, too) to clean up the interference. In only three cases have we been forced to file a complaint with the FCC under 97.101(d). In all three cases the ham was sent a letter by the FCC and the interference stopped. No, the station has no authority to do anything at all -- the FCC has that authority, and it's clear (to us, at least) that they will exercise that authority should there be a violation of 97.101(d).

>>> IOW no
>>>ham may deliberately interfere with another licensed service, which
>>>occupies the same frequency including, but not limited to, 40 meter
>>>broadcast stations, stations with secondary authorization, or other
>>>hams etc.
>>
>>
>>Where did you find that in the rules? I can't find that anywhere. Got a link or
>>citation?
>
>It's implied.

97.101(d) is not implied, it is explicit.

> If you were a ham, you'd understand the purpose of the
>rules.

I suppose you might be right. After 5 years of college and 25 years experience in the field of radio communication, I should consider becoming a ham if I ever want to understand the purpose of the rules......

What problem?

Not tolerating liars and fools?

Brain...YOU made an assertion of fact.

I have asked you (several times) to validate it. You have refused or
ignored it.

Your only "response" is to insinuate that I am "out of control" or
otherwise being "obnoxious".

I guess if I were making as equally assinine assertions in a public forum
and then being tasked to prove my "facts' and was unable, I'd be as equally
anxious to get the tiger off my tail too!

As far as I am concerned we can go ahead and drop it at this point. Your obfuscation and attempts to dodge taking responsibility have only proven MY contention that you are neither a knowledgeable person when it comes to Amateur Radio, but that you are purposefully mistruthful.

You have made assertions that you cannot substantiate.

People who ARE in a position to know better know that your suggerstion of "unlicensed" services playing some "major role" in "emergency comms" is laughable at best.

Coming from Amateur Radio's OTHER court jester, I'd expect nothing less.
You and Lennie make a cute couple!

Steve, K4YZ

No problem.

Frank Gilliland wrote:

> I guess this will be another standing question (that will most likely go
> unanswered as well): What laws mirror 97.101(d) under Parts 20 and 73?

Frank, if you really need the question answered, I suggest you go to the F.C.C. and see what they have to say.

They would probably have a more definitive answer than any I can give you.

If you need a few more rules based windmills to tilt at, I suggest you try invalidating a high percentage of amateurs licenses because we didn't take a Morse code sending test, as required by part 97:

7.503 Element standards.

(a) A telegraphy examination must be sufficient to prove that the examinee has the ability to send correctly by hand and to receive correctly by ear texts in the international Morse code at not less than the prescribed speed, using all the letters of the alphabet, numerals 0-9, period, comma, question mark, slant mark and prosigns AR, BT and SK. Element 1: 5 words per minute.

Oh Oh! thousands and thousands of Amateurs are licensed and operating in direct non compliance with a specifically worded rule in part 97!!!! Somewhere along the way, someone interpreted the rule to end the sending tests. It's just how it works, man.

Now back to the "problem at hand"

97.101 General standards.

(a) In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice.

(b) Each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. No frequency will be assigned for the exclusive use of any station.

(c) At all times and on all frequencies, each control operator must give priority to stations providing emergency communications, except to stations transmitting communications for training drills and tests in RACES.

(d) No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.

Seems like a good sort of rule to have. Makes sense too. We don't want people jamming each other, or harassing each other or their neighbors with their radios.

And what does part 15 have to say?

ï¿½ 15.17 Susceptibility to interference.

(a) Parties responsible for equipment compliance are advised to consider the proximity and the high power of non-Government licensed radio stations, such as broadcast, amateur, land mobile, and non-geostationary mobile satellite feeder link earth stations, and of U.S. Government radio stations, which could include high-powered radar systems, when choosing operating frequencies during the design of their equipment so as to reduce the susceptibility for receiving harmful interference. Information on non-Government use of the spectrum can be obtained by consulting the Table of Frequency Allocations in ï¿½ 2.106 of this chapter.

Most Part 15 devices require a label attesting to the potential for interference and to the responsibility of the device operator. The following sections from the rules provide an examples of the labeling requirements:

ï¿½ 15.19 labeling requirements.

(a) In addition to the requirements in part 2 of this chapter, a device subject to certification, notification, or verification shall be labeled as follows:

(3) All other devices shall bear the following statement in a conspicuous location on the device:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

And:

ï¿½15.105--Information to the user.

(a) For a Class A digital device or peripheral, the instructions furnished the user shall include the following or similar statement, placed in a prominent location in the text of the manual:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

(b) For a Class B digital device or peripheral, the instructions furnished the user shall include the following or similar statement, placed in a prominent location in the text of the manual:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

* Reorient or relocate the receiving antenna.
* Increase the separation between the equipment and receiver.
* Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
* Consult the dealer or an experienced radio/TV technician for help

As far as I can see what you are saying is that if the Amateur knows that his or her station is causing interference, if they continue to operate, they are doing so willfully and maliciously. This is your interpretation, and it is incorrect.

You should try a test case, Frank!

The way I would interpret the rules is that the amateur radio licensee is required to have a clean signal, as is also referenced in part 97.

With a complying clean signal, they now have the right or privilege to operate, always in compliance as regarding bands, power, content, etc, basically just following the rules.

Beyond the rules:

The neighbor has an interference complaint, and does so. In looking into the problem, the amateur will suggest, but is no no way required to pay for, mitigating the interference. Often the amateur works to help the neighbor install the needed devices.

most of that stuff just falls in the "being a good neighbor" category.

Your interpretation that the amateur knows s/he is interfering, and is therefore willing and malicious, just won't hold up. I've heard only to the contrary for as long as I've been a ham. Do you have specific legal rulings supporting your interpretation?

I plonked you after this message was downloaded, but you are still plonked. The only reason I am replying is to point out that this rule also reflects the fact that the FCC recognizes the ham's responsibility to prevent interference that can be caused by the ham, which is what I have been saying all along.

Frank is right about nothing in 97.101(d) not having anything about
poorly designed consumer electronics.

But that particular rule *shouldn't* have anything about consumer
devices, because that are not supposed to be in that section of the
rules. If the rules had to be changed every time some amateur rules
expert came along with a new twist, the rules would be the length of an
encyclopedia.

He's just saying that knowledge of interference equates to willful and
malicious interference. That is an incorrect interpretation.

97.503 defines the -standards- (notice the title?) by which a testing element is
administered. It does -not- establish the -requirement- of the code element, or
any other element, for any class of amateur license. That rule is 97.501, which
you already knew.

And for that intentional distortion, plus your repetition of old and lame
arguments in the rest of your post, you too get plonked.

You are the one playing semantic games, Frank. Your entire paragraph
below the part 97 excerpt is an interpretation, and not a very good one
at that. I've never seen an application of 97.101d to make an amateur
stop interfering with a part 15 device because of inadvertent interference.

You are making an extraordinary claim. I trust you have proof of
enforcement actions that support your exceptionally broad interpretation?

It doesn't have to. part 97 does not need to address part 15 devices

> No. And I think I have explained the reasons why to the point of excess.

It doesn't have to and that is why it doesn't. the rules are pretty
clear to me. That you have a problem with them indicates that perhaps
you should petition the f.c.c. for a rewrite if you feel strongly enough.

Frank is taking one sentence out of part 97, performing a creative interpretation on it, and trying to say that any knowledge of interference indicated "willful and malicious".

It's my understanding that the natural gas kept flowing. But that solution only works if you are close enough to a gas main to make installation of a service practical and affordable, and if the disasters encountered do not disrupt service. In earthquake areas, for example, I doubt you'd ant to depend on underground gas supply for emergencies. SNow and ice storms are a different game.

Not so, he has been trained to program every emergency number he could possibably need into his cell phone speed dial. However when the cell network is either down or so overloaded because of everyone attempting to call home to say, "I'm ok turn on your tv", that he can't get a call through, he can use his cell phone to play games until the emergency is over.

But you are suggesting that manufacturers be excused from their
responsibility to design a product to reject unwanted signals, due to
the fact that hams are a small minority and instead placing the burden
of appeasement squarely on the shoulders of hams, who have neither the
means, the legal resources, or the financial backing to make a poorly
designed product reject the signals that he may be emitting. The
obvious remaining alternative then becomes the cessation of all
transmissions. That's not an acceptable compromise.

>Yes it does. 97.101(d).

I think I see now what your issue might be.
If you look at the wording of subpart (d) again:

(d) "No amateur operator shall willfully or maliciously interfere with
or cause interference to any radio communication or signal".

You are confusing the term SIGNAL with the term DEVICE. You are
correct that a ham station may not interfere with any signal,
broadcast or otherwise. But where you got it wrong is that most RFI is
not a case of a ham's signal overriding a broadcast station's signal

into a specific receiver. Rather, it's the case of a poorly designed
receiver receiving a stronger local signal on another frequency, which
it's not supposed to receive, which then blanks the receiver's ability
to receive the desired broadcast signal. If another receiver, which is
designed better, can be placed next to the affected receiver, and it
plays the broadcast signal unaffected, then no interference exists.
The "interference" only exists inside the electronics of the poorly
designed receiver. In other words, the ham is not interfering with
your station.

It's not as explicit as you think as you've implied that the term
"signal" extends to cover "receiving devices" as well.

Don't purport to judge a man until you walk a mile in his shoes. That
25 years of experience doesn't mean that you know anything about the
amateur radio service.

Does the fact that I've had 30+ years of experience in 2-way radio
communication mean that I can step in and do your job?

If the rule is as Frankie states, why did not the FCC did not put me off
the air or require me to stop using 15 meters in the case of the lady
with the tv that used a 21 mHz IF that picked up my 15 meter
transmissions? Why did they tell her to either put up with it or get a
new tv? She even called the TV station who also complained to the FCC.
Wonder why the FCC told the TV station the same thing?
Frankie can interpet the rule any way he likes, the ruling authority is
the FCC and their interpertation and in the case of a device not being
able to reject a ham's signals, the FCC generally rules in favor of the
ham, thus making Frankie's interpertation invalid.

Snipped.

Here we are four days after I posted the original thread, and so
far the only "answer" to the question as to why Brain cannot answer
questions about assertions HE made have been a concerted effort by he
and Lennie to mount a
flood the NG with rhetoric" campaign.

Oh well.

Brain makes assertions of "fact", then calls those who call his
"facts" into question "obnoxious", "nuts" or other perjoratives" that
I am sure Lennie is feeding him.

Brain Burke...class clown...with no class.

Brain likes to make claims and assertions about Amateur Radio or
other radio related topics that he can't/won't validate...Worse yet is
taht most of those "assertions" are easily disproven.

Oh well...that's how he "earned" the playful moniker "Brain".

OK.

Why is that? You afraid of a little spirited debate? Hell, you never
"plonked" Twisty. Do you actually like arguing with his nonsense? Yet
someone else mounts a logical challenge to your dogmatic notions, and
you close the door? Don't worry, I'm not about to accuse you of having
a "communications deficit".

>The
>only reason I am replying is to point out that this rule also reflects the fact
>that the FCC recognizes the ham's responsibility to prevent interference that
>can be caused by the ham, which is what I have been saying all along.

Yes! And this rule (97.121) outlines the conditions by which a ham may
be legally forced to cease transmissions. And it specifically calls
attention to the fact that not all receivers, which are involved in
RFI cases, are build with good engineering practice in mind. The FCC
specified this so as not to hold the ham responsible for those cases
where the device is of a design not consistent with good engineering
practice, which would therefore place an undue burden on the ham in
order for him to continue participating in the amateur service.

In other words, if a ham station is emitting harmonics or spurs which
would then meet the conditions of 97.101, then this rule would come
into effect. But if the ham station does not emit any spurs, and the
"interference" is only within a device which has inadequate RFI
shielding, then the ham, in the eyes of the FCC, is not responsible.

If the FCC's intention were to make hams ultimately responsible for
any and all cases of RFI, then they would not have added this section
which codifies these specific conditions by which a ham can consider
himself "off the hook" so to speak. 97.121 would therefore be
superfluous

By your absolute interpretation of 97.101, there would be no need for
97.121. But the fact that 97.121 exists, in itself, should indicate to
you that your interpretation of 97.101 is flawed to some degree.

Well, don't UK licensed radio users pay for the BBC?

In any event, Replay Radio offers Coast-to-Coast for download without going through the show's website. Yes, Replay Radio is also not free, but it is reasonably priced and offers hundreds of other shows.

I don't live in an area which is prone to earthquakes. I weighed likely scenarios and noted that in many emergencies, gasoline and diesel fuel are the not always easily obtained. In some instances they are hoarded and the prices can skyrocket. In a prolonged power outage, many station have no power to pump the fuel.

My solution was to buy a 3.5 KW gasoline generator and to purchase a kit to convert it to natural gas or propane operation. The generator is a Craftsman with a Briggs and Stratton engine. The conversion kit was only eighty dollars. It cost me another 30 dollars to purchase a high pressure rubber hose with brass pipe fittings on each end to avoid transmitting the vibration of the generator back to the house. This is much cheaper than purchasing a generator specifically made for use with natural gas.

A major factor in making my decision is that I pay nothing for natural gas.

Hey Arnie...

Brian Burke, AKA "Billy Beeper" AKA "William" accused you of "enabling" me over my refusal to be bowled over by Lennie's arrogance.

Don't let him make YOU an "enabler" by acknowledging his alter-ego. BillyBeeper/William is Brain Burke, taking a lesson from Lennie in how to disperse his foolheartiness over several screen names.

> Aren't those 1/8th royalties great.

Some folks took royalties and some took free gas, Steve. Whoever owned
this place way back, took the free gas though it has a limit of 300,000

cubic feet yearly. We heat the barn through the winter and still have about 120,000 cubic feet left each year. The natural gas generator and the greenhouse lean-to we're putting on the back of the barn will help eat up some of that unused allotment.

Now if I could just find a natural gas compressor, I'd work on converting the riding mower...

Correct! Which makes it not a likely candidate for emergency services.
If it works to let people know you're still alive or need help or
whatever, of course you use it. But it is still very much a point to
point solution. Which is to say, not a solution for large scale disasters.

Indicative on not knowing how the little things work. No tower or power, no cell.

1503. Attention Earthlink users: Earthlink invests another US$3.5M in BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-22 23:26:23 UTC
From: Paul B <pbarris@no.spam>
Message-ID: <8701ETH7833.2458F8789@taranews.net>

On top of a $500,000 investment, Earthlink has just invested another $3.5 million. You folks who are Earthlink subscribers are helping to pay for the BPL investment.

(See http://www.dslreports.com/shownews/41140)

So why don't you put some action behind your anti-BPL rhetoric and walk away from Earthlink? Any ham who opposes BPL while s/he continues to use Earthlink as an ISP has to be viewed as a very large hypocrite.

The idea of a boycott is not a bad one.. but there is the unfortunate
circumstance that in a large number of small and medium sized communities,
EarthStink is the only game in town..

> based upon someone else's sacrifices is absolutely callous and cruel.

Yet you do everything possible to get back into some kind, any kind, of uniform.

Why?

Do you think that it will embellish one's own personal achievements?

Ever notice how immense those pyramid alert rosters get at the bottom?

Actually, the network goes down trying to notify enough amateur
volunteers who signed on but really aren't available.

You both couldn't be more wrong.

What you are describing is disaster planning by government agencies.

Disaster -preparedness- is taking action to make sure that personnel,
equipment and supplies are in-place in the event of a disaster.

However, you should note on the FEMA and State EMA websites that they
ask for the Average Citizen to make plans -and- preparations in the
event of a disaster.

While I realize that a family planning for disaster doesn't get to be
on a recall roster at the State Police or ARC, they don't get armbands
and it's not glamorous and they don't get awards and citations for it,
EVERY FAMILY IN A DISASTER AREA WHO DOES NOT DRAIN STATE AND FEDERAL
EMERGENCY RESOURCES IS AN ASSET IN THAT EMERGENCY.

Emergencies aren't just about continuity of government for crying out
loud!

Steve, please notice the correct quote would be, "And it's always
about the military and civil authorities, isn't it?"

Please notice the word, "authorities" in my statement.

Your brain is squirming like a toad. You twist my words as you do
soooooooo many other things.

Your correct paraphrase should be (if you were an honest person),

"""Uhhhhhhh....Brain....Other than "military authorities" or "civilian
authorities", what other categories are there?"""

I reply, The citizens. WE THE PEOPLE! Ever heard of them?

Of course. It's also possible that the system was being overwhelmed. Doesn't
really matter, if something is unavailable, the cause doesn't matter too much
except as an an indicator of when service might return, and as a lesson in what
to do different next time.

The ignorance of things technical is nothing new, of course. In some ways,
industries promote technical ignorance by using new terms (like "wireless" and
"cordless" rather than "radio") which make the technology actually used less
than clear.

No, Steve, I have responded to your twisted up "quote" of me. It
shows you to be the liar that you are and shows that you manipulated
my statement in a deliberate and deceitful way.

Then you make accusations based upon your misquote, and attack, attack, attack.

You've done it again more recently.

You take the prize.

I have shown you to be that which you loathe.

Self-hatred is an unhealthy thing. Think about counseling.

Cool! I just heard about the tower this past weekend, and here you come along with a link to it Good timing, Jim. It's a little scary at first sight, but a magnificent structure nonetheless.

As for the concerned residents of Alpine, they might want to chuck their cell phones if they are so worried about RF exposure - though of course I'm sure they never use them! 8^)

But frankly, they strike mer as being less than smart. And I do like the term "McMansion"!

They are not going to rely on that cell phone for their major comms
during an emergency. The cell network is not included in disaster plans
as a viable means for emergency comms during a major disaster by the
military and civil emergency authorities, ham radio is.

> doesn't know about it could fill libraries.

Ever been to a library?

WRT Part 97, what Len may or may not know about Part 97 cannot be
greater than the total volume of Part 97. That happens to be one
small book. One small book cannot fill a single library, let alone

multiple libraries.

Them's the Facts.

Unless the laws of physics work differently for amateur radio.

> Try to get THAT straigt too, Putz.

As an arrow.

> loud!

Every family should have a disaster kit, the FEMA site list those items that should be included in the kit. They list a portable, battery-powered radio or television and extra batteries.
Nowhere do they list a cell phone, though they do state you should have a list of phone numbers of places you could go to. I would certainly think one would take their cell phone in an emergency. Families or individuals will be using the cell phone for their own purposes, the military and civil emergency authorities will not be relying on the cell network as their primary, secondary or even third source for emergency comms as the cell network will, it it is working, be overloaded by those families and other individuals try to figure out where they should go, what they should do, calling relatives and friends to see if they are OK, ect.
If an emergency official can use his cell phone to communicate he will, but he is not going to count on it as his primary ability to communicate with other emergency personel.
The cell network may well play an important part for communication for the AC, but not for military and civil emergency comms. Ham radio can and will it needed.

But there is. You stated that what Len doesn't know about Part 97
could fill libraries.

That is patently false. If Len knew nothing at all about Part 97 it
could not fill more than a single copy of Part 97, which is quite
small. Avail yourself to the USGPO or the ARRL Bookstore if you dare.

You exaggerate.

You bully.

You twist people's words and you edit their statements to fit your
rude and obnoxious rantings.

Back under your slimy rock.

Remember the scene in "Braveheart" ? The scotts just annihilated 300 heavy horse and riders and the commander of the british tells his subordinate "YOU lead them". If we followed your logic, every person who was personally responsible for sending jobs overseas should be executed. So you do it. There would be a lot of blood all over the place because to many corporate pukes WANT the damn BPL, no matter how many were wiped out. Similarly, no matter how many people take exception to the current administration, it will continue because so many want it, no matter what it does to our country or the world. However, in the case of the current administration, there is an active resistance who would have absolutely no qualms about liquidating the opposition. Perhaps you might join them - they would love to destroy our infrastructure.

"William" wrote ...

> And you've trained your volunteers to some standard?

Our "volunteers" are government employees who have this duty assigned to them as part of their employment, and they are well trained in EM. All of the angencies that support us have trained their volunteers via either RACES or ARES in EM. Of course, that training varies from jurisdiction to jurisdiction, but there is little we can do to enforce our standards on them.

> for such purposes.
>

I agree that the specialized function it provides could have assisted us -- and we too a long look at that when we were planning. But in reviewing all COAs, the cost-benefit just wasn't there. Since we are primarily in contact with civilian agencies (both state and federal) during emergencies, it made better sense to utilize the cilvilian HAM radio assets we had in place. We have plenty of standard military comms available other than MARS HF. The Amateur radio piece is for redundancy purposes -- not as a primary means of communication. For example, all of our VHF is military and of course the SAT and wireless is run on military net/satilites for security purposes.

The only things "busted" here, Brain, are your lame attempts to deflect
from your glaring misrepresentations of truth and assinine offerings of
allegiance to a person known for chronic lying.

I am truly sorry that you cannot keep up with current events, Brain, but
your suggestion that I somehow plagerized anything the Left Coast Creep did
is...well...lame.

Now...If you care to spend the effort to do so, you can try and "prove"
that I plagarized Lennie, especially with the "typo = rage" silliness that you
two seem to think is appropriate.

Then I will produce numerous posts, with all pertinent headers, wherein I
explicitly made reference to Lennie in throwing the typo silliness back at you.
I will THEN have even MORE "ammunition" with which to tweak your nose,
Brain....(Not that I need any more, but if you insist on giving it to me, I
will use it...)

>Emergencies aren't just about continuity of government for crying out
>loud!

Oh?

Brain, WHO, in the advent of a major disaster, is going to make sure that food get's delivered, that the lights are back on ASAP, or that the water supply is protected...?!?! Who's going to make sure the hospital has resources, or that the police or other security services are going to be there to protect your home? (yeahyeah...I know you're gonna give me that "dead, cold fingers" routine about personal firearms...I have a couple, but I can only hit so many targets so quickly and for so long...)

Just one more example of what you DON'T know about emergency preparedness, Brain, altho I will marginally agree with your comment that those who don't drain disaster assets are themself an asset.

>However, you should note on the FEMA and State EMA websites that they
>ask for the Average Citizen to make plans -and- preparations in the
>event of a disaster.

Yes, they do...

And except for Mormons and the reasonably "well off", I don't know of too many people who can stockpile food for more than a week's rations or can leave the disaster area for the cottage in the mountains so as to NOT be a drain on those assets.

But since you brought it up, Brain, if "the big one" (enter any disaster of your choice shy of total destruction here:_____) should hit YOUR town, how many hours/days/weeks can you keep YOUR family from needing ANY of those services?

Your turn.

I don't need to "twist (your) words", Brain. They speak for themselves.
If you find that I am tripping you up with them, perhaps you should choose them
more carefully?

>Your correct paraphrase should be (if you were an honest person),
>
>"""Uhhhhhhh....Brain....Other than "military authorities" or "civilian
>authorities", what other categories are there?"""

Honesty is not a problem in this case, Brain.

Having once again exposed your failings, you look for a scapegoat. Look
in the mirror.

>I reply, The citizens. WE THE PEOPLE! Ever heard of them?

Yep...I'm one of them.

So, now you're going to make this a debate over Constitutional
definitions?

Unable to make headway here, so you're shifting gears again? OK...If not for the elected government or the Armed Forces, who should be responsible for community-wide emergency preparedness? I already agree that each family should take it's own initiative...we're talking about restoring the lights, providing fresh water, making sure that the community is secure...

>my statement in a deliberate and deceitful way.

Untrue, Brain.

You've not responded to the SPECIFIC question of what MAJOR role the
unlicensed services play in "emergency comms"

That's a very specific question, one you've NOT addressed.

There's nothing twisted or manipulated...YOU said that these other
services "play a major role"...I've asked you to provide specifics.

You haven't.

I even created a specific thread trying to prompt you to answer it.

All you do is call me names and accuse me of being "nuts".

>Then you make accusations based upon your misquote, and attack,
>attack, attack.

There's no "attack", Brain. You make assertions you can't/won't back up
with some sort of corroboration.

If you are tired of getting your toes stepped on, perhaps you shouldn't be
sticking them out where they can get stepped on...?!?!

Almost three weeks ago Lennie accused me of "cribbing (his) phrases and words" in order to "claim them as (my) own"...

I asked him to provide some examples.

None were forthcoming.

Thanks, Lennie. Proved my assumptions about your lack of honesty or character...Again.

No problem, Arnie. Welcome back to the fray.

Current Lennie/Brain practice is to make assertions they know are
either false or area at least dubiously true and then call you "nuts"
when you ask them to validate thier assertions.

Brain's most recent NG faux pas was to claim that the unlicensed
radio services (Class D CB, FRS, MURS, Part 15) "play a major role in
emergency comms".

I've quoted Brain word-for-word several times and asked him to
please provide some examples, but so far he's only gotten as far as
calling me "obnoxious", etc. His recent "Quioterobeson" is
cute...even imaginitive.. now if I could just get a straight answer
out of him!

A neverending task, but I am hopeful!

How many petitions does that make altogether. Don't these people realize that the plethora of petitions will drag out the process? It demonstrates a lack of consensus in the ham community, which could cause the FCC to do exactly nothing.

Naaaaaa.....They'll do "something", mostly because it's expected of them,
not because it's necessarilly needed or appropriate to do so.

The smartest thing they COULD have done was defuse all the controversy in
the first place and "suspend" further code testing when S25.5 was
modified...especially since that was the way they were already leaning in the
first place, public opinon notwithstanding.

And the second smartest thing they could have done was meld the Novice and
Advanced Class licenses into the three remaining classes. The whole purpose
of "Restructuring" was to administratively streamline the FCC's
workload...Sooooooooo...Why leave two whole classes of licenses out there with
no possibility of making new ones? They should have just taken a one-time
swipe at clearing the database then.

Keeping the classes has the advantage that they could easily be re-opened if they should decide that they made a mistake. It's happened in the past. With today's computerized databases, it just isn't that difficult to keep the "orphaned" classes. I suspect within the next few years, the Novice licenses will diminish greatly anyway due to lack of renewal.

The simplest thing would have been to simply decide how many, if any,
classes would keep the code and leave the structure otherwise unchanged.

All things I had taken into account in my prediction! I remember how incredulous some were at my idea of how long it would take. My "4 years to change" may have even been optimistic!

And yes, there is a decided lack of consensus in the Amateur community, especially when a sizable percentage of us (perhaps even a majority) prefer that Morse testing be kept, in direct opposition to the way things are likely to go!

I want a decision to be made one way or the other. Hanging in limbo does none of us any good. Regardless of the FCC's decision, I will continue to encourage and support the study of code. As my own experience and abilities grow in its use, I find it ever more worthwhile. I just wish I had the discipline to carve out more time for it.

>ham, thus making Frankie's interpertation invalid.

It's not 'my' interpretation -- the rule is short, simple, written using simple terms, and its meaning is easily understood by anyone capable of reading it. But if you -still- can't understand it, let's break it down again:

========
PART 97--AMATEUR RADIO SERVICE--Table of Contents
Subpart B--Station Operation Standards
Sec. 97.101 General standards.
....
(d) No amateur operator shall willfully or maliciously interfere
with or cause interference to any radio communication or signal.
========

(1) The rule is written as a subparagraph in a section of the part that applies exclusively to the Amateur Radio Service. Therefore, if you are licensed under that service, this rule applies to you. It does not apply to any other service, such as the Broadcast or Commercial services -- they have their own rules and are not subject to the rules for the Amateur Radio service.

(2) The rule 97.101(d) says specifically, "No amateur operator". This can be interpreted in no other way than to mean that there are no exceptions to this rule -- it is to be obeyed by -all- hams. According to the FCC, "Section 97.101 applies to all amateur stations at all times." If these rules apply to -all- amateurs then there is no amateur who is exempt. Therefore, there can be no circumstance where an amateur can be excepted from these rules.

(3) By the FCC's own interpretation above, if the rule applies at -all- times then there is no time, day or night, when these rules do -not- apply.

(4) The two words in the phrase "willfully or maliciously" are seperated by the logical operator "or", which means that the rule is valid even if only one of those words are applicable.

The word "willfully" has also been defined by the FCC and the federal courts in the vast numbers of NALs that have been issued over the years. In almost every NAL it is pointed out that its recipient had been given notice that his/her actions were a violation of law, and that he/she continued to violate the law after such notice was given. This demonstrates that the violation was done "willfully" -- not necessarily with the intent to violate the law, but with the knowledge that the law was being violated by his/her actions. Reading 97.101(d) using this interpretation of "willfully", which is the same interpretation accepted by the FCC and the federal courts, an amateur that knows his/her station is causing interference, yet continues to operate, is therefore "willfully" causing interference.

The word "maliciously" is easily defined as 'having bad intent', which the FCC usually determines by the nature of the interference.

(5) Once again, the word "interference" is defined by the FCC:

========
PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS--Table of Contents
Subpart A--Terminology
Sec. 2.1 Terms and definitions.
.....
(a) Where a term or definition appears in this part of the Commission's Rules, it shall be the definitive term or definition and shall prevail throughout the Commission's Rules.
.....
(c) The following terms and definitions are issued:
.....
Interference. The effect of unwanted energy due to one or a combination of emissions, radiations, or inductions upon reception in a radiocommunication system, manifested by any performance degradation, misinterpretation, or loss of information which could be extracted in the absence of such unwanted energy.
========

Paragraph (a) declares that the definitions in this section are applicable to all of Title 47, including Part 97. Interference is specifically defined as "The effect... upon reception in a radiocommunication system". This clearly means the interference is manifested in the -receiver-. Also notice that interference is determined by the fact that information in the radio communication is lost, -not- by the manner in which that loss occured. I.e, the definition of 'interference' does not make exclusions: it does -not- exclude receiver overload; it does -not- exclude intermediate frequencies; it does -not- exclude equipment of 'poor design'; it makes -no distinction- between fundamentals or harmonics.

(6) The phrase "to any" uses the word "any", not 'some' or 'most', 'licensed' or 'unlicensed', or even 'legal' or 'illegal'. The word 'any' is a simple word to understand. It has a universal understanding to the level where the FCC did not

feel the need to define it any other way. Therefore, it is not to be defined in any other way by anyone else, not even by a few hams looking for an excuse to circumvent the rule.

(7) The term "radio communication" is also defined by the FCC in 2.1(c). Under that section a 'radiocommunication' is "telecommunication by means of radio waves." A radio communication is therefore the -information- that is carried by radiocommunication.

Let's put this all together:

Under the laws regulating the Amateur Radio Service(1), no licensed Amateur Radio Operator(2) may operate his/her station at any time(3) when he/she knows that the operation is causing(4) the loss of information being received(5) in any(6) radiocommunication system(7).

That is the FCC's interpretation as referenced point by point. If you have a problem with that, take it up with them.

Now. It's absolutely pathetic that there are hams who try to spin their own interpretations on such a simple rule, especially when some of them criticize CBers and keyclowns for the same behavior -- warping legal interpretations for their own benefit. And the "spirit of the law" is even simpler: Do what you want as long as it doesn't bother anybody else. Yet some hams seem to think that they have some sort of legal right to ignore that axiom by virtue of a license. They probably think that a driver's license gives them the right to throw litter on the side of the road and that it's everyone else's responsibility to pick it up. It isn't. You throw the garbage, you clean it up. It's that simple.

And no, the FCC doesn't like enforcing their own laws, especially that one. It's a fair guess that their decision has less to do with legalities as it does with politics, logistics, and probably a few kickbacks from special interests. But that's not a suprise where the FCC is concerned. Regardless, until the courts rule differently or the FCC changes that law, it still stands as it was written.

Do not underestimate folks like that. Look at the BPL mess. Did you see the
Wall Street Journal article?

Remember that whenever someone describes ham radio as "a hobby", they are
giving the BPL folks an argument against us. If amateur radio is "just a
hobby", then why should it be any more important than anyone else's hobby, such
as downloading pr0n via BPL?

> that they could easily be re-opened if
> they should decide that they made a mistake.

Three classes is plenty and I doubt there's
any regrets at reducing the number of licenses.
It remains now as to what the best three are
to be as per the RRL and NCVEC which are
pretty much unified as to eliminating Tech and
Advanced. Does any other country also have
three classes?

> With today's computerized databases, it just isn't that difficult
> to keep the "orphaned" classes.

It isn't just record keeping...it is also about keeping
the rules and regs that are unique to those two
classes on the books and subject to enforcement.
Of course, another means is to leave Advanced and,
rather than a free upgrade, just indicate that the
privieges for Advanced are now identical to
Extra.

> I suspect within the next few years, the Novice
> licenses will diminish greatly anyway due to lack of renewal.

There are only about 32K now.

> The simplest thing would have been to simply decide how many, if any,
> classes would keep the code and leave the structure otherwise unchanged.

That has been done by ARRL (three classes and
only Extra would be code tested) and NCVEC (three
licenses and NO code test at all).

Cheers,
Bill K2UNK

Actually they assigned numbers to 4 petitions, you missed this one
RM-10869 - K4SX 18 September 2003
http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6515285430

Brief summary follows --

RM-10867 ARRL Petition
Auto upgrade Technician and Novice to General
Auto upgrade Advanced to Extra
Create a new no-code beginner class with limited HF priveleges
Drop code requirements for General
Retain 5 WPM code for Extra

RM-10868 AG4RQ Petition
Merge Novice and Technician classes keeping priveleges of both
Upgrade Advanced to Extra
Retain 5 WPM code for General and Extra

RM-10869 K4SX Petition
Retains no-code Technician as is

Retains 5 WPM General
Increases Extra class to 13 WPM
no mention of Novice or Advanced class elimination

RM-10870 NCVEC Petition
Essentially the same as the ARRL petition, but removes the code requirement for Extras also.

FWIW, I think the best possible result would be a combination of the ARRL and AG4RQ versions -- merge Novice and Technician classes and priveleges. Drop the code for General. Upgrade Advanced to Extra, and keep 5 WPM for Extra.

Wrong. The auto upgrade is Tech only to General.
Novice stays as Novice.

> Auto upgrade Advanced to Extra
> Create a new no-code beginner class with limited HF priveleges

Which is what the existing Novices go to.

> Drop code requirements for General

Never happen

> no mention of Novice or Advanced class elimination
> ---
> RM-10870 NCVEC Petition
> Essentially the same as the ARRL petition, but removes the code
requirement
> for Extras also.

Also includes a "commercial only" transmitter rule for
Communicator (Novice)
Also includes power limit for Communicator/Novice

> FWIW, I think the best possible result would be a combination of the ARRL
> and AG4RQ versions -- merge Novice and Technician classes and priveleges.
> Drop the code for General. Upgrade Advanced to Extra, and keep 5 WPM for

I expect to see the ARRL petition win out, but they'll
lose on keeping any code. The code war was lost and
so noted in 98-143 R&O (6 years ago). Nothing
has changed, nor has there been any new arguments
that have been made to retain code testing at all.

Cheers,
Bill K2UNK

The same power limits are defined in the ARRL proposal also. The 100/50 watt
limits proposed are set so they would be below the RF environmental
evaluation required levels.

That's what I expect to happen also, although I think that the merger that I mentioned above would keep more existing (coded) hams happy. Personally I see no real reason to keep any code testing requirement.

Break it down as many times as you want to Gillieboy, but the FCC is the
final authority on the subject and if the ham station is clean and the
fault lies with the device being interfered with, the FCC says the ham
is not at fault. Now regardless how *you* interpert the rule the FCC
interperts it differently and that makes your interpertation worthless.
No go bother the cb folks, you may get more support over there for you
rantings.

Seems that I'm that small fish in that food chain diagram. My ISP,
netcom (one of the earliest subscription flat rate ISP's on the 'net)
got swallowed by Mindspring, then that swallowed by Earthlink.

Even with support for bpl, it's still a step above aol.... ;-)

1574. ARRL's Incoming QSL Burro Screwing NON ARRL members!

Greetings,

Did you ever come across my envelope, for my Cards?

73 de K8CPA

-Chuck Adkins

P.S. I know it's been long enough, it's been almost 11 months since I sent the thing.

Hello Jay,

I'm not quite sure what to make of that reply. However, I did get a e-mail saying I did have cards a while back and that he needed two dollers and some change worth of stamps and a envelope, which I did send to him almost 11 months ago, last I checked, no one had seen the envelope, now, I'm not blaming you all for this, if it got lost, then, it got lost, I'll just have to send another one, might send it certified, to make sure it makes it.

I just want to get my cards, that's all, a nasty attitude, is something I really don't need.

Thank You.

.Chuck,
.This is my last message on this subject. I depart the area for several .weeks and will not be answering anymore bureau correspondence .until I return. However, I meant what I said. You provided no data for .me to know what had transpired previously. I get many inquiries .about bureau status and do not maintain a file of past .correspondence, assuming you did send me something on this .previously. Since you said something about 11 months ago and I .was not the manager 11 months ago, my assumption is that we had .not corresponded before. Since I read your message as, "Where are .my cards?", I responded to the letter manager to send you anything .he had, including an empty envelope so you would know there was .nothing for you. The bureau is a service provided by volunteers. We .do the best we can to serve all amateurs with an 8 in their call.

I understand your position, and I in no way wanted to start a pissing contest... however, I do believe you were in the position you were in, and I remember e-mailing a while back, say 2-3 months ago, and asked where my cards where and all I got was, ZERO response from you or the person doing your job, and a bleeding heart plea from the Michigan section manager to join the ARRL. Which I have not the means to do, Nor do I have the interest in belonging to a organzation that puts the interest of the radio manufactures first and THEN the hams, if the ARRL is going to get my money, the good ol' boys, need to make alot of Changes in the way they handle things. But, that isn't the point here, the point is, my envalope just disappeared from sight, and no one seems to give a S### about it, or me, because, I'm not a member of the "Good ol' Boys Club", Well, that's fine, when my attorney contacts the "Boy's" in CT, we'll see who's gonna blow who off... :-)

.Now, lets examine your situation in a bit more depth.

Sure. I'm good for a fight, no problem...

.FACTS:
.You received notification that you had cards at the bureau and no .envelopes on file.

Yes, your doing good so far.

.You sent the requested envelope but did not receive your cards after ." x " amount of time.

Yes, like 5 months... and I asked, and got the same ol' B.S. message and bleeding heart plea to join an organization. WHICH I DON'T HAVE THE MEANS TO DO SO, AT THE MOMENT AND REALLY DON'T CARE TO DO!!! and now, 11 months later, I ask again and get the same thing....

.You made a query to someone, maybe me, about the status and .were informed that no one had seen your envelope

Yes, and recieved no answer from the 8th area manager.
and N8CXQ said he had not seen my envalope. What I wanna know is, where did it go??? Did you all even see it?

.Now, "y " time later, you send an email out of the blue asking if we .have received your envelope yet with no explanation of past history.
.You say you might need to send a new envelope via certified mail.
.You say you just want your cards, not an attitude

I explaned my past history over and over and over and over and ALL I GET IS THE FLIPPING BLEEDING F'ING HEART PLEA TO JOIN THE ARRL, I DON'T WANT TO JOIN THE GODDAMNED ARRL, IF I DID I WOULD HAVE ALREADY DO SO, JUST SEND ME MY DAMN CARDS! WHY IN THE HELL IS IT SO FLIPPING HARD FOR YOU PEOPLE TO UNDERSTAND THIS, MY ENVALOPE GOT LOST. CAN'T YOU PEOPLE JUST PICK UP ANOTHER ENVALOPE AND PUT A FEW STAMPS ON IT AND SEND MY CARDS TO ME?????!?!?!?!?!?!? IS IT THAT SO HARD?!?!?!?!?!?!?!?!?!?!?!?!

I hate to start swearing, but I can't seem to get anyone to understand anything, it's like dealing with a bunch of damn retards!

.RESPONSE:
.If you really wanted your cards why didn't you have envelopes on file .before you were notified?

Simple. Money issues! ever think that there is people out that, that CANNOT AFFORD TO HAVE CARDS ON FILE???? HUH? NEVER THOUGHT OF THAT DID YOU????

.No mention is made of timing between when you were notified and .when you responded. - If you did not respond within 90 days there is .a fair chance your cards were returned or destroyed before an .envelope arrived.

I responded right away, this isn't the issue, the issue is you guys LOST my envalope or tossed it in the trash, because you all got a axe to grind with me, because I happen to think the Michigan section is run by a bunch of LIDS, NO-CODE Idiots, and you all know this and wanna give me a hard time. well, fine, do it, but when my attorney gets done with you all, there won't be a

ARRL!

.If the timing was sufficient between when you sent the envelope and .you were told it had not arrived, why did you not assume it was lost in .the process someplace and that you needed to send another .envelope then?

again, MONEY ISSUES! I'm out of work, and I had to barrow money from my parents. is that a good enough answer for you?

.If you think I have an attitude, I appologize. I put in over 8 hours a

Yeah, yeah, yeah.... don't patronize me with your crap. just get me my cards or I'll sue the league in court.

.week doing bureau business. For this I receive nothing except .reimbursement for direct out-of-pocket expenses and grief from .people complaining that we are not meeting their .needs/wants/desires/expectations.

Well, cry me river guy, if you can't handle the position then quit and let someone else do it.

.What do you do for the hobby?

I operate. good enough for me, and honestly, I don't have an interest in the league. too many idiots in power.

.If you choose to send a new envelope to the central bureau via .certified mail, it will only sit at the post office until I return. It will not .be sent to your letter manager until the next cycle mailing which will .probably be in May, as I am attempting to get a mailing to them .before I leave this week. (Do they hold certified mail for 2 plus .weeks?) You may send direcly to your letter manager.

Well, the way I see you all owe me a 2.65 for the postage you all tossed in the trash can, and for the envalopes sent to N8CXQ, that never made it. That makes like 3.50 or so... it's a small amout, I know, but it's the point... you all lost my stuff, and even if you didn't couldn't you all just grab a envalope and put some stamps on it and send it, on your guys dime? or is the league that broke? Hmmmmm...

.I sincerely am not trying to be mean-spirited or display an attitude.

could have fooled me.

.I will not enter into a spitting contest with you.

I won't either, but if my cards aren't in my hands in the next 7 days, my attorney will be contacting someone at the league. I'm tired of being lied to, and being put off.

.I will not respond to any further correspondence with you until I return .in mid-April. Our desire is to deliver bureau cars in as timely a .manner as should be expected for bureau cards. To do this we need .your cooperation and you need ours. I pledge ours. Part of what is .expected from you is that we not have to chase you down to remind .you that you need to send us envelopes.

Well, you can BLOW ME OFF, like your pallys here in Michigan or you all can talk turkey. and send me my cards on your dime, seeing you all threw my stuff away. otherwise, my Lawyer will be in touch.

.73,
.Jay, K4ZLE

Yeah, sure.

-Chuck K8CPA

Whoa, Chuck,

I'm not stalling. I don't have your cards. I've never had your cards. The Bureau manager is checking with your letter manager to see what has happened. Whatever it is I don't know, but it is being determined.

You can sue all you want, but there is no guarantee whatsoever that you will collect anything. As a matter of fact, I'll bet you wouldn't. This aside, no one wants to get messed up in a drawn out lawsuit that gains no one but the attorney anything.

The rules of the Bureau are that it is not necessary for the Bureau folks to keep cards when an amateur does not have envelopes and adequate postage on file. Simple. If you didn't have an envelope and adequate postage, the Bureau folks did not owe you anything. I'd say this is especially true when one considers that you are not supporting the operation of the Bureau. Why is it that nonmembers seem to be the people who make the greatest demands on something they are receiving out of the kindness of members? Lets face it, if you don't like the Bureau rules, there are other sources through which you can get your reply QSLs. I'm sure we'd be just as happy to have you choose to spend a few bucks to some guy to manage your QSLs and quit aggravating our Bureau people as we are happy to help you at no charge.

Now, then, I'm not angry with you, but there was no reason for your attack on me. I've done nothing to you. Your conduct is certainly no way to "win friends and influence (favorably) people."

Lets get back to where we are all fellow amateurs who are pursuing in the case of DXing the hobby aspects of Amateur Radio and quit acting as though you have been bilked out of millions of dollars by some con artists. Can we?

73,

Jim

...Whoa, Chuck,

You riding a horse?

.I'm not stalling. I don't have your cards. I've never had your cards.

I never said you did.

.The
.Bureau manager is checking with your letter manager to see what .has
.happened. Whatever it is I don't know, but it is being determined.

I know this, I called N8CXQ, I got his answering machine. I left a message. My question is why wasn't this answered the first time I checked, instead of me getting the don't worry about it and join the ARRL please, type message. I'd join tommmrow, but I cannot afford it.
and BTW, *YOUR* letter manager, not mine, I'm not a member, remember?, told me he was leaving out of town, *I* checked with N8CXQ, I've yet to hear from HIM as well...

.You can sue all you want, but there is no guarantee whatsoever that .you will
.collect anything. As a matter of fact, I'll bet you wouldn't. This aside,
.no one wants to get messed up in a drawn out lawsuit that gains no .one but
.the attorney anything.

It isn't the money, it's the point. The point is I asked about this 5 months ago or so and I got the cold shoulder, got blowed off, whatever you wanna call it. which is pretty typical for the Michigan section when it relates to me. I just wanna know what became of my envalope, if it didn't make it to N8CXQ, I tend to believe it got tossed in the trash by someone who's got a problem with me.

.The rules of the Bureau are that it is not necessary for the Bureau .folks to
.keep cards when an amateur does not have envelopes and adequate .postage on
.file. Simple. If you didn't have an envelope and adequate postage, .the
.Bureau folks did not owe you anything. I'd say this is especially true .when
.one considers that you are not supporting the operation of the .Bureau. Why
.is it that nonmembers seem to be the people who make the greatest .demands on
.something they are receiving out of the kindness of members? Lets .face it,
.if you don't like the Bureau rules, there are other sources through .which
.you can get your reply QSLs. I'm sure we'd be just as happy to have .you
.choose to spend a few bucks to some guy to manage your QSLs and .quit
.aggravating our Bureau people as we are happy to help you at no .charge.

Now, you've totally missed my message, I SENT THE ENVALOPE! WITH THE POSTAGE! AND I NEVER GOT MY CARDS! and I haven't heard anything from CXQ at all,as if it arrived, last I checked 5 months ago, he never seen it, where did it go? and

what the heck does this have to do with membership, you're mixing two totally different issues up! you people offer a service and when I send my envelopes, they are missing? and as for the RULES of the burro, yes, I got a problem with them and YES, I am going to complain and bring this to light in the Internet newsgroups and let PEOPLE KNOW NOT USE THE ARRL QSL BURRO AS IT IS A RIP OFF! and if they lose your envelope, YOU GOTTA PAY AGAIN AND THEY WON'T DO A THING TO HELP!

.Now, then, I'm not angry with you, but there was no reason for your .attack .on me. I've done nothing to you. Your conduct is certainly no way to ."win .friends and influence (favorably) people."

I attacked you because YOU FLATLY REFUSED TO ADDRESS THE ISSUE, INSTEAD YOU WANTED TO SELL ME A ARRL MEMBERSHIP! I want my cards, if I don't get them, I'll NEVER JOIN the ARRL! You think I just supposed to sit back and shut up and not care what happened to my 2.75 cents or so worth of pastage, plus the monies spent on the Envelopes?!?!?! Heck Yes I am going to Complain, I've even called K1MAN and informed him of the goings on here in the Michigan area, Why can't the area manager go to the post office and find out, did they have a envalope from Lincoln Park, Michigan 48146 come through and maybe it was lost, why can't something be done? to insure this NEVER happens again?

.Lets get back to where we are all fellow amateurs who are pursuing .in the .case of DXing the hobby aspects of Amateur Radio and quit acting as .though .you have been bilked out of millions of dollars by some con artists. .Can .we?

I'm sorry, but No I cannot just sit by idle and forget the fact the ARRL's incoming QSL Burro LOST my envelope and REFUSES to do anything about it. TALK ABOUT BAAAD PR!

Have a nice day, usless OM.

Chuck,

You missed my point. The point is that unless YOU have an envelope and postage at the Bureau when YOUR cards come in, there is no requirement that the Bureau folks bust their chops to hunt you down to deliver YOUR cards.
The point is that you failed to comply with the rules of the Bureau which are

and have been publicly published for years. Quit trying to place the blame on someone else for what you did. Become a man and accept that you screwed up and that whatever the snafu is that resulted in you not getting any cards there may be or may have been on file with your letter sorter is because of your screw-up.

A second point is that you totally failed to communicate your need in your initial E-mail of a few days ago and, instead of communicating your need, you tore into a fellow who probably is at least twice the man that you are or will be. Frankly, in my opinion, you insult the Christ you proclaim to believe in by your fully un-Christian manner of confronting your fellow man.

'Nuf said? Grow up. If you truly profess Christ as your Savior, show it and quit acting as though you follow Beelzebub! As an aside, you might learn to spell, as well.

Jim

Yes, but at the same time, Earthlink is spending millions to bring suit against spammers. Don't toss them off the truck just yet. I think they can be redeemed.

I'm 100% against BPL. Let's convince Earthlink to be the same.

Earthlink will do what is popular, legal, and profitable. The big question is: How do we let them know that what they are doing with BPL is not going to work?

I have to say that if you only post here, they won't hear your complaint. Have any of you contacted Earthlink yet about BPL? Hmmm?

>>>be simplified. I wonder if anyone can provide evidence that the those
>>>giving the tests are being overburdened?
>>
>> It's not about being overburdened, but about matching the test to the
>> privileges. Why test for 1500 W safety if only 100 W is allowed?
>
> Well then, why not just limit ALL classes to those low powers an
>eliminate (mostly) the so called safety problem altogether. Make all
>appliance equipment mandatory and pot the innards. Make new foolproof
>connectors, and require all antennas to be installed by properly
>licensed contractors.

There are some folks who would like to do just that!

> I know answering a question with a question is bad form, but frankly,
>it isn't much of a leap of imagination to rationalize our cherished
>privileges right out from under our feet.

Which is what those "it's just a hobby" folks are doing, whether they realize
it or not.

>
> I assume that you have been in group meetings, where the original idea
>is mutated beyond recognition? I see it happen all the time. This is
>only one more reason why I don't like these proposals *at all*. They
>seem a bit of a Pandora's box IMO.

I know exactly what you mean. However, note that for over half a century we've
had license classes with reduced power privileges and it hasn't led us down the
slippery slope.
>
>Give me a good argument why Hams should need to run power over 100
>Watts, 50 Watts, 5 Watts?

Because under certain circumstances those levels of power are inadequate.

>> However, this does not mean that *all* safety questions should be removed -
>> just those connected with high power. And those high power questions must
>> then migrate to the next-higher class of license.
>
> If high power RF is dangerous, why should it be allowed at all?

It's not dangerous if proper precautions are taken.

>For
>anyone. If we wanna start that game, that question WILL be asked. Do you
>not talk all over the world with qrp power? I myself have talked to
>Australia on 10 watts. No record, but just a personal best. They hear
>those stories, and suddenly it looks like that might be able to protect
>those self destructive hams from themselves.

The point of license testing is not to protect someone from their own
ignorance, but to protect others from it.

>Just like cigarette smokers.

Cigarette smoking is much more hazardous than RF.

>And with the efforts to lower cell phone power going on, plenty
>of non-technical regulator types will think this is a good idea, no?

Now *that's* a valid point, as verified by the Alpine tower folks...
>
>> So it makes sense that if the entry-level test gets smaller, the next-level
>> test (General) must, of necessity, get bigger to contain the stuff removed.
>> Does the NCVEC petiton even mention this?
>

> Nope.

That tells ya something.
>
>>>>2) To give an incentive (challenge) to learn more and qualify for a higher
>>>>class license. (If the entry-level license conveys all privileges, why
>>>>bother to upgrade?)
>>
>>> But my idea, or non-idea does just that, without punitive power
>>>restrictions based on what I consider bogus rationale. For those that
>>>are happy to just ve on VHF and above, the Technician ticket is just the
>>>thing. Want HF access? Take the General test! Without Element one, there
>>>isn't anything to hold ya back.
>>
>> Here's the problem:
>>
>> What we have now is a VHF-UHF-centric entry level license. The privileges
>> are
>> very heavily weighted towards the bands above 30 MHz and away from
>> HF/MF.This
>> means that most new hams will start off on VHF/UHF.
>
>> And that means they will also start off with a local/regional focus, and
>> almost certainly with manufactured equipment.
>>
>> The current Tech Q&A pool contains a wide variety of subjects - covered in
>> very
>> little depth. The wide variety of privileges granted requires all those
>> questions. You and I may find them trivial, but some beginners may not.
>> After
>> all, don't you know at least one "professional" who has not even obtained
>> an entry-level amateur license?
>>
>> Wouldn't it make more sense for the entry-level license to contain a
>> balanced
>> mix of privileges, including significant HF as well as VHF/UHF privileges,
>> coupled
>> with a test that matches the privileges granted? That way, new hams can
>> sample more of what ham radio has to offer.
>
> Actually, I find the differences between local/regional, (V/UHF) and
>worldwide (H/MF) to be one mighty and fine incentive to upgrade.

That's you.

>In
>addition, given the results of the way the Technician license evolved,
>from a experimenter's license to the real entry level license, I would
>have to say that many many hams are happy to stay right there. Many of
>them only want the type of coverage that the Tech license gives.

Maybe. But if that's so, why aren't the repeaters busy 24/7?
>
> I believe that the propagation differences between the VHF and up, and
>HF and down make a natural and rational dividing line between
>privileges.

Well, I have to disagree. I say it's an artificial division foisted upon us by a few people who clamored for a nocodetest license as the savior of amateur radio. Hasn't happened.

>It also makes for less of a class system.

Go down that road far enough, and you'll have a one class system.

>If the Tech has
>the power and privileges for their respective bands, and they are happy
>there, then it's a great thing.

Seems to me that it would make more sense to offer a wider sampling.

>> For example, imagine the prospective ham who wants to build kits, restore
>> old
>> gear or even homebrew from scratch. Which do you think would be a more
>> realistic first project - a simple HF rig or a simple VHF/UHF one? Which do
>> you
>> think will result in more QSOs and more "reward" for the builder?
>
>Well that isn't going to happen under some of the scenario's.

Which is why those scenarios are not good ideas.

>I'd certainly like that myself.

Then let's go for it.
>
>> Yes, it's possible to work the world on VHF/UHF, but isn't it easier for a
>> beginner to do so on HF? Particularly with limited antennas?
>

1578. Wall Street Journal front page BPL story Tuesday 23 Mar 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-23 23:03:30 UTC
From: yeltrabnhoj@email.com
Message-ID: <4060c0ad.24008625@news.individual.de>
Source record: 89642

Today's (Tuesday 23 March 2004) Wall Street Journal, Page One story
Above the fold, single column story, titled

"In This Power Play, High-Wire Act Riles Ham-Radio Fans
New Use for Lines Sparks Tension With Operators; 'Firestorm in Penn Yan.'

About 26 column inches in all, not counting head, jump page head and illo.

Analysis to follow at
http://huntforsm.cjb.net
but definite inaccuracies and unbalanced portrayal of amateur community.
Omits skip issue entirely as well as the international allocation of
frequencies and federal emergency reliance on medium and short wave bands.

Good news: They do document multiple instances of interference, even one
case where power company caught lying.

<snip>
"We haven't seen the sun darken and everything electrical turn to
white noise and haze during a deployment," says Matt Oja, an executive at
Progress Energy, whose test Mr. Powell visited. "This is a fairly vocal
group that has been whipped into a frenzy by their organization."
<snip>
To become a fully licensed ham operator, people still need to learn
Morse code, though that requirement likely will be dropped soon after more
than a decade of debate.
<snip>
Ed Thomas, the FCC's chief engineer, says the commission has spent a
year listening to the hams' concerns about power lines and is getting
frustrated. "Why is this thing a major calamity?" he says. "And honestly,
I'd love the answer to that."
<snip>
Companies such as Con Ed and Progress note that current FCC
regulations call for systems to be shut down if they interfere with hams.
The radio operators agree the rules are clear, but they fear they will be
rescinded or not enforced.

Con Ed says its system in Briarcliff Manor (poster's note: Westchester Co.,
NY) doesn't interfere with the hams and maintains that, in two years of
testing, it hasn't received one complaint. But the American Radio Relay
League says it did mention this system in its letters to the FCC, and it
has been complaining about it on its Web site.

Huh?

and then call you "nuts"
> when you ask them to validate thier assertions.

No. I call you nuts when you act crazy, which is a lot.

Changing my words, putting them in quotation marks and saying they're
mine, and then asking me to validate them is a lose/lose proposition.

I cannot validate what I didn't say.

Me too. I cannot validate what you claim I said because I didn't say
it.

You putting it in """quotation marks""" doesn't mean I said it.

You putting anything in quotation marks makes me very suspicious
because I've seen you try this before. Then you repeat it and repeat

it and repeat it until even you believe your own lies.

You're nuts.

But it was only 5 volts!

Or consider this setup that I was once resonsible for:

Individual lead-acid batery cells rated at 420 AH. Sixty of them in series,
with very heavy jumper straps. Oddly enough, the charger was a very small unit
that used a pair of thyratrons and put out maybe 5 amps, tops on a good day.

Getting across *one* cell was hazardous, due to the enormous short-circuit
current of the big cells and the possibility of a battery explosion from the
hydrogen. I don't want to think about the consequences of shorting the entire
bus.

Or standards. Remember that when you see the phrase "it's only a hobby" or
"it's just a hobby", etc. What some folks really mean by those words is don't
expect anything resembling standards, or knowledge, or skill from the person
using the phrase.

I see......

You didn't lie, but what I quoted, which WAS what you said, IS a
lie...?!?!

You've got some real brass cajones to make an assinine statement like
that, Brain!

I've asked you the same question over and over in response to YOUR
assertion that "unlicensed services" play a "major role" (YOUR ADJECTIVES) in
"emergency comms"...WHERE is the proof...?!?!

You can call me "nuts" if you care to. YOUR words are archived in this
forum and have been quoted verbatim on numerous occassions.

You have purposely misrepresented the truth. THAT is lying.

Sorry if you think it's "nuts" to think so. Webster refers.

Yes, you did. You directed it to Dee, and it's been quoted verbatim at
least a dozen times in the last 5 days.

>You putting it in """quotation marks""" doesn't mean I said it.

But quoting your posts from Google does.

>You putting anything in quotation marks makes me very suspicious
>because I've seen you try this before. Then you repeat it and repeat
>it and repeat it until even you believe your own lies.

I haven't lied.

YOU stated that the unlicensed services provide a "major role" in
"emergency comms".

I asked you to prove it.

You've wallowed around for days now trying to dodge the question.

I am sorry that you can't/won't be a man and either pony up an answer or admit that you were carried away with the moment and exaggerated the alleged importance of the aforementioned "unlicensed services".

>You're nuts.

And you're a lying coward. So I guess that balances things out, huh...?!?!

>out of it.

The kids are not the issue.

Your willingness to be forthcoming with responses to questions posed to you in direct response to posts made by you is.

What "major role" in "emergency comms" do the unlicensed radio services play, Brain?

YOU said it was "major"...that's an adjective used BY YOU in response to a post exchanged with Dee.

Now...an answer...?!?!

Steve, K4YZ

1593. Brain's Own Words...Now Who's Lying...?!?!

UNQUOTE

At this point you refuse to answer the questions put to you about assertions YOU made, calling my questions "insanity" and insinuating I was being "rude and obnoxious"

Again...didn't work then, doesn't work now.

I'll finish the rest of the post I am quoting as it is in the original post (you can check the URL yourself, if you need to) since it's just as applicable today as a week ago.

Nice try getting out of this one, Putz.

QUOTE

"Tone it down a bit"...?!?!

YOU made the assertion that "unlicensed services play a "major" role in emergency comms".

I've asked you three or four times now to substantiate your claims. YOUR claims, Brain...cited word-for-word, repeated by you several times.

You "respond" by telling me I am rude and obnoxious.

You call ME "bizarre", yet you make outlandish assertions in a public forum, then dodge all requests to "prove", at any level, your claims.

I believe you to be a chronic liar. You have been "called" on several occassions to back up your assertions, but then use this ruse to try and avoid taking responsibility for your own actions.

Call me rude and obnoxious if you think it deflects attention from you, but I can assure you that it does nothing of the sort. If anything, childish dodges like this only highlight YOUR bizarre behaviour.

The FACTS are that the "unlicensed" services (11 meter CB, FRS, MURS and Part 15) provide NOTHING more than an ancilliary function in ANY "emergency comms" and you know this to be true.

I certainly do in as much as I am INVOLVED with "emergency comms" on SEVERAL levels, not all of which involve the Amateur Radio or CAP. Most everyone else in this forum knows these things to be true too.

You and Lennie seem to be the only ones in this forum who think that if you keep repeating the same lame, untrue "stuff" that it will somehow manifest a thread of truth. Sorry...that doesn't work.

Now...PLEASE try and exceed my expectations with the next post and pony-up some cajones to either admit you are either blatantly lying, making wild guesses, or just trolling for the sake of making arguments that you obviously can't support.

Or REALLY try something new and discuss something you have some
EXPERIENCE in...THAT would be refreshing.

Steve, K4YZ

The power limits make sense. Disallowing homebrew is counter to the purpose
of the ARS and should not be enacted.
However, in addition to the "commercial only" rule, the NCVEC proposal calls
for a low voltage limit, which would also keep new hams from taking
advantage of hamfest bargains on older rigs with tube finals, like the
venerable FT-101, TS-520/820, etc. This is an unnecessary impediment to new
hams getting a "starter" HF rig at affordable prices.

I also dislike the entry level class name proposed by the NCVEC proposal -
"communicator" - I prefer retaining the traditional "novice" name, which is
recognized around the world (and has been used in other countries as well).

Sounds kewl to me, Mike. On a slightly different vein, how about the
resurrection of the r.r.a.p net? 7037 kHz, if I remember correctly. Not a
ragchew, mind you, but just a simple weekly QNI.

Do you support not teaching newcomers about RF safety? I believe they
should be, and as long as they know the fundamentals, they should have
the same power privileges as the rest of us.

I'll say right out that not teaching new people the fundamentals of RF
and electrical safety is not very responsible.

The whole concept of lower power limits for the newbies just seems
punitive to me.

> Disallowing homebrew is counter to the purpose

I very much agree with that. It is such a strange proposal, and doesn't
make much sense really. We allow our children to sit at computers with
monitors running at higher voltages.

> I also dislike the entry level class name proposed by the NCVEC proposal -
> "communicator" - I prefer retaining the traditional "novice" name, which is

Novice is a fine name. I like it, and it has a historical precedence.

3 + 14 = 17 for 2003 to 2004.

>Don't these people realize
>that the plethora of petitions will drag out the process?

Why do you argue against the ARRL? That is the home of your Church of St. Hiram. Have you been excommunicated?

Why do you argue with the NCVEC? Do you think you will never again be examined for your amateur radio license?

>It demonstrates a
>lack of consensus in the ham community, which could cause the FCC to do
>exactly nothing.

There *is* a lack of consensus. Don't try to hide it. You can't "plonk" that no matter how you try. Accept it and work with it. Denial is wrong.

You can't keep holding to the standards and practices of the 1930s in amateur radio forever. The FCC knows that.

Morse code testing WILL be eliminated. Entirely. It's only a matter of time. Accept the inevitable. Not even the ARRL can change that.

"Their." Remember also that the verb transitive of "counsel" can
have either one or two Ls in it.

> Scumbag Extrodinaire Leonard H. Anderson thinks it's OK to somehow "use"
>someone else's sacrifices to make himself look good.

Tsk, tsk, tsk...more personal insults.

Such "use" wasn't done. I honor the servicemen of the 8235th Army
Unit as well as all servicemembers of the United States Army.

I was assigned to that Signal Battalion and so were 23 others who
were killed in the line of duty. I was billeted in Hardy Barracks,
named for one of those killed, Corporal Elmer Hardy. I lived in what
was named Camp Tomlinson, the entire site of the FEC Sig Svc Bn
transmitter site for Army station ADA. Tomlinson was a lieutenant
in the same Signal group of 20 that died in the crash of a C-54 on
1 Jul 50 in Korea. I am proud to have served in that Battalion and
continue to be, even of the 78th Signal Battalion in Camp Zama,
Japan, the descendant of the original 71st Signal Service Battalion
formed in 1945. I am proud to have been interviewed by the Pacific
Stars and Stripes service newspaper for a memorial issue containing
a two-page article on Hardy Barracks of a half century ago.

None of that is fictional. I was there, in that HF communications
unit, in that signal battalion. I know the dates, I know where, I am
proud to say where I was and what I did. No fiction necessary.

> If you somehow find it "OK" for him to do that, it makes YOU a scumbag
>too.

I will remember your words next time I visit a veterans' cemetary
for services honoring the veterans who never finished their tour of
duty. I'll tell all around me that Steve Robeson, supposedly another
veteran of the U.S. military calls me and all of them "scumbags."

You are really one sicko. Get help.

>various communications failures occured with FDNY, NYPD, PAPF, EMS and othr
>agencies.

Exactly who was "recriminated?" There were investigations, yes, but
"inquests" also?

Recrimination is the act answering an accuser by accusing them
in return. That is what you do to others in here. Who and where
were the agencies doing this "recrimination?"

An inquest is specifically a judicial inquiry, as before a jury. Which agency appeared at any inquest and at what time? What was the ruling?

> THAT has been reported in "USA Today" and other nationwide media
>sources.

I don't read USA Today, only the Los Angeles and New York Times, Time magazine, Newsweek, and sometimes the Wall Street Journal and Variety. I don't recall the "inquests" or "recriminations" you allege. Please supply details on specifics.

> And almost every plan from the Department of Defense on down to "Podunk
>Hollow USA" have some provision for including (or at least considering)
>implementing Amateur Radio as a recourse.

As a secondary, not a primary use.

The Auxilliary Communications Service of the state of California accepts volunteers with or without amateur license and doesn't even consider amateur radio as a primary fall-back medium for large-scale emergencies.

>> emergency situation was happening. (In reference to the 4th
>> hijacking...SR)

"SR?" That wasn't in my post. Why are you adding things?

> However Amateur Radio WAS employed in the post-incident recovery at the
>site.

In WHAT NTSB "recovery?" The NTSB has its own investigators and recovery procedures, such procedures limited to hired salvage operators and military personnel.

Describe this "post-incident recovery" and tell us what the NTSB has documented and where we might find all that for reference.

>> The "9/11" Attack is popular to espouse because of the enormous
>> emotional impact to all Americans. But, it was an ATTACK done
>> by other humans against all of us and definitely NOT some kind of
>> natural event emergency or disaster. The "kamikazi" nature of

>> this suicide attack was NOT anticipated by anyone and all were

>> with whatever reseources were available.
>
> Oh...so as long as the causal effect was "intentional", then we can
>discount using Amateur Radio to receover from teh post incident effects,
>Lennie...?!?!

No...because the amateur radio assistance was quite small
compared to the overall task of recovery, including the assistance
of other volunteer groups who aided the city of New York.

The National Transportation and Safety Board does not "train
radio amateurs" to recover crash evidence. Try not to falsify your
exaggerations by spouting lies and assorted untruths.

>> hours after the Attack on the WTC.
>
> However Amateur Radio DID play a "major role" in the following DAYS of
>post-incident recovery.

Incorrect. NOT a "major role." NYC handled its own debris removal from the crash site plus coordination of search teams looking for victims with the aid of other cities' search teams and facilities. Identification of victims, both found and not found, was handled by other volunteer groups. Local medical facilities set up their temporary aid stations and were able to communicate adequately with their own resources. Local volunteers set up all sorts of aid for crash site workers in the way of some food and some clothing (little was needed). All that was documented on the news media.

Had amateur radio been such a "major" role-player in the recovery, the news media would have featured them. Network news did not to other parts of the country.

The U.S. government and Washington, DC, government handled the relatively small (compared to WTC towers) Pentagon crash site adequately with their own resources. Again, that was featured on the news media. Again, network news did not pick up on any "major" aid by amateur radio in/around the Pentagon.

Yes, amateur radio HELPED with more incidental messaging from the NYC and Washington crash sites, as indicated by ARRL "news reports" but not to any extent that could possibly be called "major."

> Not even the most 'diehard' Amateur Radio supporter suggests that Amateur
>Radio is the "primary" source of emergency communications unless a ham just
>happens to be "in the middle" of it and uses a radio to "call it in".

Then you should stop with the implication that it is so important.

> That HAS happened and CONTINUES to happen on a fairly regular basis.,
>especially wilderness areas that have more trees than cellsites.

Not yet. Three years ago in the state of Washington, a stranded climbing team on Mount Ranier were alerted by a call for help heard by a young teen age girl using an FRS handset. The team was rescued and the details made public in northwestern states' newspapers and broadcasting. [there were neither trees nor cell sites in that area of Mt. Ranier]

There are many and varied forms of radio available to the public that don't require amateur radio licenses or equipment. For example, there are approximately 170 thousand communications radios in and on the railroads (source: NTIA report of 2002). The railroads frequently traverse land having neither trees nor cell sites. You take no notice of (but do pejorate) CB mobile radios that number in excess of a million in use on major road routes, are used daily around the clock by truck shipping ON the allocated legal CB channels.

>>>Which one, I have several, what are the odds they are all down at the
>>>same time? How many cell phones do you have?
>>
>> Since neither you nor your equipment is identified and we don't
>> know the working status of your "several" radios, the above is
>> just a brag claim of no intrinsic value.
>
> Just as are YOUR numerous claims of having some sort of "monitoring
>station" set up at home. Beyond a cordless telephone, TV, and TV remote, I
>seriously doubt you to have anything capable of converting RF to AF.

I've never claimed any "monitoring station" at either home.

I have HF and VHF receivers (four in all) which are largely disused in "monitoring" U.S. ham bands. Nothing much of interest to me there. Only the little Icom R-70 is used for anything, largely for occasional SW BC listening and WWV-WWVH time checking of the two WWVB radio clocks. The old Regency civil airways receiver, useful only for local aviation communications, is in the inside workshop but may expire from accumulated dust loading, not from use. There is now a very narrowband 60 KHz receiver which is part of a very accurate frequency standard system (goal of 1 PPB accuracy) with a home-made shielded loop antenna but its bandwidth is only about 20 Hz and quite unsuitable for "AF." My wife and I carry a cellular handset in the car for any emergencies as well as car-to-home calls (used twice for troubles, once by a car battery failure and once to aid another motorist, both calling the AAA). The cordless telephone down south is at 2.4 GHz, the one up north is at 900 MHz. We have AM/FM BC receivers for entertainment purposes at both houses as well as television receivers (digital service by cable in the south, analog service by cable in the north).

None of that is what anyone could call any sort of "monitoring"
use. All is for casual entertainment purposes, except the cell
phone carried in the car not yet used for any "real emergency."
The little old Icom R-70 serves as an HF-range spectrum
analyzer surrogate for occasional electronics work (it has been
measured-calibrated additionally for that). The people I some-
times work for and work with have TRUE monitoring facilities
but I seldom avail myself of anything like that other than the work
necessity monitoring (none of it involving ham bands except
where amateur radio is secondary in allocated use).

> I am far more likely to accept JJ's claims than yours. Especially since
>I've enver seen him post anything that can be called anything even close to
>untrue.

"JJ" has "enver" been identified. His claims are not referencible as
either true or untrue. You would "identify" with anyone anonymous
in a vague attempt at "getting even" with an "opponent" in this
newsgroup...and have.

> YOU, on the otherhand, are a bit on the "prolific" side of
>mistruthful.......

Incorrect again. I've given references for corroboration of what I've
said. Continued insistance that what I write about factual data
as "untrue" is wrong.

>>>As far as using the cell network for official emergency comms, you can
>>>consider it not working. In times of a major emergency it becomes
>>>useless for anything but attempting to make a call.
>>
>> That is a popular myth but it remains only a myth.
>
> It is not a myth. It has happened.

As an absolute statement it is a myth. Except for physical damage
(as reported by Jim Hampton on a "police repeater" in NY state as
an example), the "failure" of any part of the telephone system is due
to too many subscribers accessing the system at once. When the
access overload ceases, the telephone system automatically
returns to normal.

> Anything that HAS occured is NOT a myth.

I am still waiting for aliens to arrive from outer space so that morse
code can be used to defeat them.

I am still waiting for amateurs to prove that CW can get through
when Access BPL noise is 40 db above a received CW signal.

I am still waiting for your proof that amateur radio has played a
"major role" in any real large-scale emergency in the United
States in the last half century.

>> The cellular telephone network is part of the telephone infrastructure
>> and is intimately connected with the local exchange's switching unit.
>> That switching unit is designed to handle only a fraction of installed
>> numbers, both wireline and cell phone. But the switch itself is also
>> backed up by battery supplies "riding on" the primary power; also
>> true for cell sites themselves.
>
> And for those cellsites that were in the path of an oncoming tornado?
>Where is all that electrical energy going to, Lennie...???

To power up the gassing that all the amateur radio locations in the
same path will miraculously survive the same tornado (or hurricane
or firestorm or flood or prolonged snowfall).

>> During any sudden event there WILL be a flurry of telephone calls
>> made and that MAY overtax the limited number-handling capability
>> of the switch. ...(SNIP)
>
> There HAVE been and HAS overtaxed...

So, how has your vaunted amateur radio saved that? Or aided
that? Or supplanted that?

The minimum-access-number design of all telephone systems has
been known for as long as automatic switching has been used
there. That time is over a half century.

The access overload clears itself automatically once the number
of subscribers accessing it is reduced. Nothing was "damaged"
or "failed." That's designed into the system and was so from Day
One.

During any sudden emergency event in the last half century in
the United States, there is no record of amateur radio
communications notifying anyone. Radio amateurs have, indeed,
helped in many instances for POST-onset communications; they
are on record as having helped in small emergency situations
such as piracy and wounding on the open sea happening on a
private water vessel.

>> The onset of the 11 Sep 01 Attack by four hijacked airliners was not
>> only sudden but unprecedented, without any possible warning. The
>> subsequent crash of two airliners into the WTC towers did destroy a
>> portion of the lower Manhattan telephone system wiring but did NOT
>> destroy or disable the entire Manhattan telephone infrastructure.
>
> Just a signifcant part of the commercial wireless network and an entire
>OES center...Ya know...the SMALL stuff...

The operations center for NYC, not all the emergency facilities. NYC
has alternates. Damage was to lower Manhattan borough telephone
trunk lines, not the entirety of Manhattan and certainly not to Queens,
Staten Island, Brooklyn, Long Island, etc. The NYC general vicinity
is densely populated.

Just the same the NYC infrastructure continued to operate with work-arounds, alternates, summoning more police, more firemen, equipment to clear and remove many tons of debris, getting additional help from elsewhere, all using undamaged communications.

>> The onset of a fire storm, typically in dry open country, is not sudden
>> and may take literal days from ignition start to reaching fire storm
>> conditions. There is plenty of warning time using conventional
>> communications means to begin fighting that.
>
> Then why, if it's so "gradual" in evolution, does the CDF still employ
>Amateurs to help them out..?!?!

It's largely political reasons in many areas of the USA but it may sometimes be necessary for economic reasons. I don't know the budget details for the California Department of Forestry (CDF) but they DO have their own radios and radio equipment and they DO have volunteers in some lookout stations but those volunteers do NOT have to be licensed radio amateurs.

If amateurs are "employed" by anyone for their amateur radio communications activity, that is a distinct violation of federal law. Amateurs are quite allowed to work for communications facilities but they cannot use amateur radio bands for that purpose.

> (For everyone else, "CDF" is the California Department of
Forestry...since
>Lennie likes to brag on how avante garde Kalifonication is, I always like to
>feed it back to him when the opportunity arises!)

Research your French terms. Wrong use of "avante garde." Wrong spelling of "Kalifonication." If you do not know French and cannot spell, try to write English better.

> Two major points:
>
> NOAA, despite tons and tons of technology, STILL depends on hundreds of
>Amateur Radio volunteers in it's SKYWARN program to provide real-time reports
>to it's centers...To the point of spending a LOT of money to train Amateur
>volunteers and to deploy facilities cap[able of communicating with them, both
>on HF, V/UHF, and digital modes.

Define "LOT." Reference what you say by the actual, specialized-activity dollar amounts to the overall NOAA budget allowance. Describe the actual training and equipment NOAA "gives" to amateur volunteers (but not to non-amateur-radio volunteers). Are the only volunteers in "SKYWARN" just radio amateurs?

What are these "deployed facilities" to amateurs? Are those "deployed" to other volunteers?

Does NOAA reject input from existing public safety units or average citizens? Has their weather satellite system been modified or taken away such that NOAA can only find and track

hurricanes but not tornados?

>> There is no reported evidence of amateur radio ever stopping an
>> earthquake, hurricane, tornado, flood, storm, or aircraft hijacking.
>
> No, there's not.

At least that response is rational. :-)

> However there ARE tons of articles on how Amateur Radio has been
>part-and-parcel of the recovery phases of ALL of those various senarios...

...and all seemingly written by only the ARRL. Interesting. :-)

Where is Point Two of your "explanation?" It is missing.

You still haven't identified the location or date of those "hostile actions"
(seven?) you were in while in the U.S. military. Were those also
written up by the ARRL? Or in your daydreaming?

Not at all. Both Brian and I have explained what is actually used in emergency communications and by what means.

The "degree to which amateur radio is used" is a secondary role, one of several fall-back methods to use in case of loss of one or more of the primaries. The primary method is use of existing infrastructure and public safety services' communications already in existance.

What is "foolish" is all the preening and posturing about your self-defined "importance in emergencies" from having been granted a license in what is basically an avocational radio activity, a hobby.

I would suggest a check of your vision. You have lost perspective in viewing amateur radio in the very large picture of other radio services. You are exhibiting mental tunnel vision. Not good for you.

Brian is correct. You are not.

The scope of operations by the larger emergency agencies in the
United States are available for viewing on the Internet.

> Brain, on the other hand, having been UNABLE to successfully argue
against
>the value of Amateur Radio in those plans, has shifted his definition of
>"emergency comms" to those of STRICTLY "the average citizen".

Again incorrect. Brian Burke has stated the obvious condition of
emergency situations which affect ALL citizens, "average" to
the self-posturing, self-important minority who think only they are
right and "superior" to the average.

> In the very narrow slice of "emergency comms" that Brian the Brainless
has
>wedged himself into, yes, John Q Public is going to whip out the old cellphone
>and call 9-1-1 to get a cop, report a fire, or request EMS for an accident or
>medical emergency...Just like he would have dialed a payphone 5 years ago.

That is more like "dialing a 'payphone' [sic] 25 years ago."

Try to keep up with urban conditions and the number of pay telephones
versus cellular handsets and subscriptions for same.

There is NO "Brian the Brainless" in here. Try to hold down the
insulting behavior.

The 911 Emergency Number plan has been in existance for far more
that "5 years." It is a national plan. It was implemented primarily
to handle the small-scale emergencies common everywhere in this
United States. Such calls are the majority of situations, not "a
very narrow slice" as you incorrectly state.

> In a true "disaster preparedness" mode, cellphones may suffer all of the
>bad things that you and I have said they will.

Incorrect again. In a "true disaster" SITUATION (not a 'mode') the
telephone system may be overloaded. However, the same thing
may be said of all amateur radio in that same situation. Hypothetical
situations are merely hypothetical, not real things.

Hypotheses should reflect on objective consideration of the entire
situation and its infrastructure. Hypotheses should not be subjective
conjecture based on personal desires, thoughts or preferences. You
are guilty of subjective conjecture in your disordered hypothesis.

> THAT assertion is made upon the evidence that such incidents have ALREADY
>HAPPENED, and those occurences have been sufficient to impress the REAL
>"emergency comms" planners to continue to incorporate Amateur Radio in a wide
>range of plans.

The "real emergency communications planners" are no doubt very
well aware that the telephone system can become overloaded with
callers at the onset of any large emergency. However, such
overloads affect only the switch capabilities of most subscribers,
not the users of leased lines which do not route through switches
(broadcast stations' audio, fire department station alert circuits).

Large-scale emergencies do not require "notification" of an event's
occurrance in most cases. An earthquake is most definitely felt
over a large geographical area. A tall skyscraper pair hit by
hijacked airliners is visible to tens of thousands of city dwellers.
A raging firestorm creates enough smoke to be seen to the
visible horizon. A hurricane or tornado is preceded by spectacular
(and unfortunately familiar to long-time dwellers) cloud conditions;
some tornados and nearly all hurricanes are spotted by weather
satellites and tracked, with public notifications, by NOAA. Floods
are nearly all preceded by high rainfall storms. Such "real"
emergency conditions may result in destruction of amateur radio
capabilities as well as commercial or government communiations.

Reiterating from another thread, the major emergency agencies all
have websites for easy access to their organization and policy.
Information from them is public and accessible on request.

Is there some agency that has amateur radio as a prime method
of emergency communications by any emergency agency in the
United States? I think not. Plans and policies of the "real"

emergency agencies will place amateur radio as a secondary,
or fall-back method of communications. First choice is the
existing public safety agency communications and
communications service providers such as telephone companies.

> This is not "urban legend" or based upon some " feel good news release of
>the ARRL" as Lennie the Loser would have us believe. Real, front-page news
>stuff. Sorry he won't admit it, but that only helps to substantiate MY claims
>about his "superior intellect".

Personal pejoratives against another do not win your argument.

The information about "real" emergency agencies is out there for
all to see. If all you can see is what you want to see, then you
can only be accused of narrow mental tunnel vision.

>>> So they may, but in times of emergency, the military and other civil
>>> authorites will not rely on cell phones to handle major emergency
>>> communications.
>>
>>And it's always about the military and civil authorities, isn't it?

>>I am no longer an instrument of national policy. Are you?
>
> As long as my Right to Vote has not been revoked, you're danged tooting
>I am!

Brian used the term "instrument of national policy" as a euphemism
for military service. In this case he indicated he was no longer IN
the military service.

Voting Rights are guaranteed by the U.S. Constitution and are NOT
restricted to military service personnel. Review Amendments 15, 17,
19, 24, and 26 to see Voting Rights for United States citizens.

If you have been discharged from military service in the United States
then you are no longer in that military service.

> Try again, blockhead.

I am a veteran of U.S. Army service, 1952 to 1960. My Honorable
Discharge was granted in April, 1960. I have always been a citizen
of the United States and have managed to vote in every election
in my residence location since 1956. Regardless, you tried to
prevent my communications with my government over federal law
pending on 25 January 1999 (see FCC ECFS 98-143 for that date).

You cannot deny the above since your attempt is public information
and available for all to see.

Why do you assume "power" that you do not have?

Why do you continue to post petty personal pejoratives against
those who disagree with you?

Seek mental health therapy. It will improve your thinking and be
better for all of us.

>>>
>>>So Amateur Radio isn't their first choice? How sad.
>>
>> Tsk, tsk, tsk...another Legend of the Airwaves down in flames.
>
> It wasn't a legend to start with.

That's true. It is a myth, but the myth has become legion, not
legend.

Amateur radio is NOT the first choice for radio communications
during the onset and immediate aftermath of emergency situations.
The first choice is the existing infrastructure. In nearly all

communities that is the public safety agencies equipped with
Public Safety Radio Service radios.

The above statement is qualified by the history of the last half
century documented by news services and historians. The myth
was created by selective editing of certain historical events'
information by organizations for their organizational use.

> The "legend" status was bestowed by you. The rest is archived history.
>
> Obviously one that is sufficiently true enough for CURRENT emergency
>planners to continue to rely upon.

Amateur radio is useful AS an emergency communications medium
but emergency agencies relegate it to a secondary level, an option.
Primary choice is the existing infrastructure of Public Safety Radio
Service users as well as landline communications providers, utility
and private business companies having radio equipment...and, if in
a region, military bases and installations who have extensive,
flexible-mode communications equipment.

Trying to imply that amateur radio is the prime selection for any
emergency communications is self-deceptive, self-defined
posturing, regardless of the number of afternoons spent visiting
some distant emergency site undergoing a drill.

>>made on emergency communications.
>
> The point remains: The "emergency agencies" continue to make plans for
>the use of Amateur Radio to help provide communication needs in the advent of
>loss of regular telephony services...Not to use telephony if Amateur Radio
>fails.

Where is it written anywhere that everyone "not use telephony if
amateur radio fails?" That is something you manufactured. :-)

The FIRST radio communications during the onset of any emergency
will be the existing infrastructure of public safety agencies and
communications service providers. That has been so for the last
half century in the United States, including the 11 Sep 01 Attack on
America. By all the news sources and historians...except those
few sources who wish to selectively edit such history to suit their
particular purpose.

Note: "Telephony" is a very general term referring to voice
communication over a relatively long distance. To be specific and
understandable it needs a definite preceding word such as in
"radio telephony" or "wireline telephony." Try not to be just phony.

While amateur radio exists and can be useful, actual emergency
communications services relegate amateur radio communications
as a secondary, fall-back medium. In general, based on the history
of all real emergencies in the United States of the past half
century, such amateur radio use has been of the "health and
welfare" variety, indirectly of value only to survivors of some
emergency.

Amateur radio is not per se qualified or trained as an emergency
communications service as a whole. That it "can" be used is
not a pro forma definition that it "is" an emergency
communications service. Trying to imply that it "is" an emergency
service is nothing but personal self-agrandizement and daydreaming,

regardless of the rage and anger felt when others do not believe you.

Public safety radio communications services ARE defined as
handling emergency situations whether those situations are for
one individual or a whole community.

THAT is interpretation of the rules. Not very creative, though.

> Frank is taking one sentence out of part 97, performing a creative
>interpretation on it, and trying to say that any knowledge of
>interference indicated "willful and malicious".

And you are doing as creative an interpretation but your righteousness
compels you to say your side is "correct."

>> If the ham is transmitting on his own frequency with a legal and clean
>> signal, then he is not interfering with any service. Interference is
>> transmitting on the same frequency as another service. We don't do that.
>
> Very good point, Dee!

Broadcasting is also a SERVICE. Don't forget that.

If a neighborhood radio amateur wants to fire up a full gallon Tx next
door to someone using their $4000 plasma screen TV to watch an
important NHL game...with other neighbors...and the TV has its
signal blocked from RFI overload...are you going to claim all that
righteousness and "law-abiding activity" is somehow correct?

Explain that to the court when you are an "expert witness" in a
civil suit brought by the blocked-TV neighbor...and his friends.
Is all that righteousness worth it for the immediate legal billings
of the kilowatt-wieiding ham?

First of all, as an "expert witness" you have to prove - by lab
test results - that the kilowatt rig is truly "clean" and within FCC
specifications. QST advertisements and pre-incident ARRL Lab
reviews will be meaningless. Then, again as the "expert witness"
you have to prove - by lab test results - that the $4K plasma TV
(the one that got blocked) is "worthless" for out-of-channel RF
input. You might also need to (expertly, as the witness for the
defense) demonstrate the actual RF level of the amateur radio
signal causing the interference.

It may be that the irate TV viewers will eventually lose and the ham
wins...but that isn't a guarantee that all those billings and lab fees
are going to be covered by the litigant in a civil court ruling. What

will quite probably happen is that the radio amateur has caused severe enmity in his/her neighborhood from all the immediate neighbors. As just an "expert witness" you won't be living in that neighborhood. But, you can be very content in your righteousness and pride in being "correct" and (probably) very "superior." The ham is stuck living in that angry neighborhood.

If the ham loses, then he/she is stuck with costs of the litigation (you really don't want to know some of the dollar amounts). As "expert witness" you won't be stuck with any of that. The FCC isn't going to step in and pay some of those costs and probably won't have any law on regulations to do anything to either side.

You can posture afterwards on your righteousness, obeying the law, etc., but are you really "right" in the broader sense? Common sense says otherwise.

The thread title includes the word "BPL." Access BPL is still open for comment on NPRM 04-29 to set standards for incidental RF radiation (and measurement thereof) in the HF to low VHF EM spectrum. That poses a real threat to RF incoming propagation in the very near future for EVERY HF to low VHF receiver user, amateur or otherwise, in EVERY urban U.S. region that has an Access BPL system.

Are you or other righteous, "we are in the clear because of the law" amateurs imagining it will go away magically because you are all so "right?" NPRM 04-29 is one of the hottest buttons for every HF user to push right now.

It won't matter if the code test goes away or stays there, Access BPL will truly render weak-signal CW superiority myths as impossible. Manual morse will NOT get through at 40 db under the ambient noise level possible with Access BPL right in front of your QTH.

You can't convince yourself, so how can you expect others to? :-)

The NPRM on Access BPL is still active. Have you yet tried
to "convince" the FCC on their "warped interpretation?"

I don't see your name in the ECFS on any Dockets, 04-37, 04-29,
or 03-104. My name is in there on all three.

Or do you just prefer to stay in here and jabber back and forth,
not taking any action to show your dedication and committment
to the "amateur community?"

>you should petition the f.c.c. for a rewrite if you feel strongly enough.

Perhaps you and the other personal-battle "fighters" should
comment on Access BPL to the FCC instead of playing verbal
paintball in a newsgroup?

Or do you accept the existing Part 15 rules on incidental RF radiation?

There is a very strong possibility that, if Access BPL spreads, the incidental RF radiation from the system will cause enough HF through low VHF random noise that it will eliminate any low-level reception for anyone in that part of the EM spectrum.

In other words, all of those expensive, super-sensitive HF receivers can kiss their sensitivity ratings goodbye.

Those ratings will only be laboratory measurement values that will be useless in practical amateur radio locations. Everyone on HF through low VHF will be reduced to the same level as low-quality consumer electronics radios.

Righteousness in some opinion position may look good on a screen but it is only posturing in a newsgroup if you don't back it up in communicating directly to the regulation makers.

I was IN some of those San Diego wildfire areas and didn't "see"
what you saw. Also using a cell phone. It worked fine.

Now tell us all what amateur radio really DID do there that couldn't
be done by the regular telephone infrastructure. Be specific. Try
to avoid subjective "interpretation."

>arrogance -- we've all had to live with it for years. "The great white
>current chaser" and "Legend in his own mind".

Save the vituperation and concentrate on your fabulous emergency
work for Homeland Security.

Tell us all about TCL and the Scotty. Show us where that is applied
so much in other radio communications.

Have you any experience in metrology? (not meteorology) I know
how to measure current, voltage, wattage, resistance, inductance,
capacitance very well and to small tolerances. Spent two years
working in a Calibration Laboratory. Do you wish to make fun of
that and denigrate that with more name-calling like "Great White
Current Chaser?"

Why do you apply labels that were never claimed? I happen to have
been in electronics and radio for a long time, beginning with primary
communications on HF. That's not "legendary." It is just was is.
If you wish to be petulant and abusive because you haven't had
that experience or accumulated as much knowledge, that is your
problem, not mine.

You might try for some mental health counseling, too. It would cure
you of what appears to be a radio inferiority complex.

Those people are a shortsighted as the people proposing the "no homebrew" rules. Your wording "avocation" is the proper term AFAIAC. I practive my "hamliness" that way. Is it a hobby to work with disaster preparedness teams? If so we are the only ones classed that way in the group. Is it a hobby to be a part of the Skywarn system? Is it a hobby to volunteer time for public events such as the NYC or LA marathons, or bike races or local charity events?

DO some hams practice this as a hobby? Sure. But that doesn't make it a hobby. In the overall, it is a service.

But we haven't had people suggesting that we have a commercial equipment requirement, we haven't had a commissh that we are annoying with our so called silly concerns about BPL, and concerns for our "safety". Cell phones and HF rigs both use RF correct? So why do hams get to use 1.5 thousand watts of power while those poor cell phone users have to get by on less than a watt? If RF is dangerous, it is dangerous,

....right? Even though I'm being facetious, I can garuntee that I can
sell 9 out of 10 non-ham friends I know *that* argument.

Depends. Our local club repeater is pretty busy most of the time. Others
aren't so busy. I know I've been given a lecture on occasion while
traveling by some disgruntled ham when I've called that I'm listening
and he comes back with "This is a private repeater - don't use it any
more". No mention of the private repeater in the book. Who the heck is
going to use that!

Perhaps you don't agree with my conclusion, but the propagation
differences are pretty much demarcated between HF and VHF

And that is exactly as it should be, but ham radio is there to perform that secondary role if need be, although it has performed the primary roll at times.

The military and civil emergency authorities think it is important enough to include ham radio in their emergency planning. I don't see them including you and your self proclaimed professional radio status in their plans.

Maybe you need to have your tired old eyes checked, I am sure the nurse at the home there can set up an appointment for you. Have you noticed that you are less than nothing in the scheme of amateur radio and emergency comms?

No one here that I am aware of EVER stated knowing "all about" ham radio
equipment.

However, since I do tend to use it a bit more often than you do, I dare say that I DO know more about some of it than you do or ever eill, OTHER than those same aforementioned ads!

>> Lennie's already demonstrated that he knows the words, but doesn't

Amateur Radio >>IS<< different...And it's hardly "imaginary". Of course YOU keep trying to argue that some of us are somehow insinuating that the PHYSICS of radio is different.

That is not truthful. It's the applications that are different, and in the VERY REAL world of the Federal Communications Commisssion, the Amateur Radio Service >>IS<< "different".

So sayeth the unlicensed commissioners.

> Try not to lie so much. It looks unbecoming on-screen.

You'll please cite a "lie" that I allegedly uttered, Scummy One...?!?!

>> Oh, but I have. I never said that I didn't
>
> Where and when? You've never given any details whatsoever.

Brain said that I never stated that I've served in a unit that had KIA's past or present.

I have.

I also named some of the units to which I have been assigned when you and I first tangled. You are free to research some of those exchanges, Lennie. They are not pertinent to this forum, nor is my association with any of the Marines in those units pertinent here. I choose to NOT "be you".

> a two-page article on Hardy Barracks of a half century ago.

Congratulations, Lennie...You've managed to interject fifty-year old Army history again, spun to meet your needs. Of course this forum is not about the Army or about you, your efforts to make it so notwithstanding.

Heaven forbid, however, if a Licensed Amateur mentions anything more than a week old about Amateur Radio lest YOU start in about how Amateur Radio is allegedly stuck in the 1930's.

> None of that is fictional. I was there, in that HF communications
> unit, in that signal battalion. I know the dates, I know where, I am
> proud to say where I was and what I did. No fiction necessary.

Only parts that you have previously used to try and embellish your own service with.

I don't have to, Lennie.

The Department of Defense has already done that...As has the Department of State, FEMA, The American Red Cross, The Salvation Army, numerous state's governors, etc.

> Lots of implicitness, inuendo, and selective editing from a single
> source, but you seem satisfied in your "loathing."

No innuendo necessary. Brain has made an assertion of fact. I have asked him (repeatedly) to back it up with some example of fact. He has not.

> When off-duty (not in a uniform), do you wear "loathfers" on your
> feet? Have you ever visited "West Loathian?" Slice a "loath" of

"Petulant"...?!?!

Now who's putting himself on top of the hill...?!?!

> You might try for some mental health counseling, too. It would cure
> you of what appears to be a radio inferiority complex.

Everyone that dares to cross you needs mental health counselling in your estimation, Lennie...

Why is that? I know...do you...?!?!

Sorry, Lennie...

My "experience" in Amateur Radio (and other) emeregency services
communicatioons goes back three decades. This weekend was nothing new.

> He wastes everyone's time waving around that roll of Soldier of

I again ask you as to which "imaginary" world you refer...?!?!

The one in which I am a licensed Amateur Radio operator? (oooopps! FCC says I AM a licensed Amateur operator)

Or the one in which I am a licensed aviator? (oooop again! The FAA says I got one of them, too!)

Perhaps you meant the imaginary world where I am a licensed nurse? (DRAT! Got one active and two inactive licenses which says THAT'S true too!) I also have the documents attesting to my participation in EMS (including past licenses from California) and current endorsements in Advanced Cardiac Life Support and Pediatric Advanced Life Support.

Anything else...?!?!

Either way YOU care to spell it, Lennie, I am not the one in this forum that is in need of it. That would be reserved for the guy who has no vested

interest in the Amateur Radio Service (or claims he doesn't, anyway) yet persists in antagonizing those who do.

> You and the rest of us will be aided by such.
>
> Go waste someone else's time if you don't.

Remind me of your Amateur licensure again, Lennie?

WHOSE time is being wasted here?

There's no "command" role here, Lennie.

Your boy has made assertions of fact in a public forum.

He can't/won't corroborate them.

> Neither do you have the details of When and Where for your supposed
> "hostile actions" while in the military.

What I did in the military is not pertinent here. This is a forum about
Amateur Radio communications.

> Get mental health help.

After you, Lennie...

I agree 100%.

>However, in addition to the "commercial only" rule, the NCVEC proposal calls
>for a low voltage limit, which would also keep new hams from taking
>advantage of hamfest bargains on older rigs with tube finals, like the
>venerable FT-101, TS-520/820, etc. This is an unnecessary impediment to new
>hams getting a "starter" HF rig at affordable prices.

Again I agree. Also, it's unenforceable, and open to contradiction. For
example, could a "Communicator" build a power supply for his/her manufactured
rig? Any such supply that uses house current would pose at least as much of a
shock hazard as, say, a TS-520. But the Communicator would be allowed to build
such a supply, but not to buy a TS-520. Or, rather, he/she could *buy* the
TS-520, but could not *transmit* with it. Makes no sense at all.
>
>I also dislike the entry level class name proposed by the NCVEC proposal -
>"communicator" - I prefer retaining the traditional "novice" name, which is

>recognized around the world (and has been used in other countries as well).
>
How about "Basic"?

What do you think of this idea, Carl: NCVEC proposes that, rather than have a lot of regulations questions in the "Communicator" pool, that they be *replaced* by having each Communicator sign a statement that they have obtained a copy of Part 97, have read it and will abide by it. This is proposed so that the "Communicator" test and its pool can be made smaller.

Is that a good idea?

I could care less about anyone's opinion of me, Lennie.

Like me or not, facts are facts, and I have not overtly (or covertly)
tried to misrepresent the character of Amateur Radio in a public forum, such as
yourself.

> You are NOT any authority who can demand answers from anyone.

I "demand" no more or no less that YOU "demand" from anyone, Lennie.

YOU have BLATANTLY "demanded" information from Jim Miccolis, Dave Heil,
myself and otehrs in this forum, so I'd be real careful about climbing up on
THAT "hollier-than-thou pedestle, Oh Putzy One.

> I will remind everyone that YOU have not supplied ANY details on
> your claims of "being in hostile actions" while in the military. NO
> details as to When or Where...after many months since that first
> claim and thousands of personal insults leveled against others.

And having even brought it up in the heat of our "exchanges" was an error
on my part. It has no pertinence in this forum. I allowed myself to sink to
your level. My bad.

> Not only are you rude, obnoxious, a name-caller, an insulter, but
> you are also a lying bullshitter, making claims YOU can't
> substantiate.

Ahhhh...more profanity. Didn't take long, did it, Lennie?

As for the "name-caller" and "insulter", I'd guess you have a very
personal inside view on that regard, don't you?

> Get some mental health help.

Why?

No, what Brain has "explained" is nothing at all.

Brain has asserted that the unlicensed radio services play a "major role"
in "emergency comms", but ahs yet to provide even the first example or
reference of thier use.

> The "degree to which amateur radio is used" is a secondary role,
> one of several fall-back methods to use in case of loss of one or
> more of the primaries. The primary method is use of existing

Yep. No one has claimed otherwise.

> What is "foolish" is all the preening and posturing about your
> self-defined "importance in emergencies" from having been granted
> a license in what is basically an avocational radio activity, a hobby.

There's not "preening" or "posturing" here, Lennie.

> I would suggest a check of your vision. You have lost perspective
> in viewing amateur radio in the very large picture of other radio
> services. You are exhibiting mental tunnel vision. Not good for you.

What I "saw" (or rather DIDN'T see..) was that neither Leonard H. Anderson
or Brian Burke were participants or consultants at Heartland Response 04. This
was a major effort put on by FEMA and TEMA and did involve several radio
services or nets, including Civil Air Patrol, ARES and SHARES. It included
agencies from four states and had observers from both the Pentagon and the
White House in addition to those agencies already cited.

Good for me since I was in the middle of it and had one heck of a good time.

Unfortunately, JJ, he hasn't.

Lennie still perceives himself as an "associate editor" of a long-since failed Amateur Radio magazine, and assumes since he once shared coffee with people who ARE licensed Amateurs that he somehow posseses practical skills and knowledge that they do.

He reminds me of the folks who occassionally show up in the emergency room and presume themselves to know something about emergency medicine or nursing based upon watching re-runs of "E.R."...

Close...no cigar...

Too bad you don't subscribe to any EMS/Rescue journals, Lennie...Ya might learn something about radio other than what you spew about in here.....It's a bitter subject within Fire/EMS circles right now.

> Recrimination is the act answering an accuser by accusing them
> in return. That is what you do to others in here. Who and where
> were the agencies doing this "recrimination?"

New York. NYPD. The Port Authority. FDNY. NYOES.

> An inquest is specifically a judicial inquiry, as before a jury. Which
> agency appeared at any inquest and at what time? What was the
> ruling?
>
>> THAT has been reported in "USA Today" and other nationwide media
>>sources.
>
> I don't read USA Today, only the Los Angeles and New York Times,
> Time magazine, Newsweek, and sometimes the Wall Street
> Journal and Variety. I don't recall the "inquests" or "recriminations"
> you allege. Please supply details on specifics.

Perhaps you should read some Amateur publications. Even THEY have made reference to some of the "boards" that have been called.

>> And almost every plan from the Department of Defense on down to "Podunk
>>Hollow USA" have some provision for including (or at least considering)
>>implementing Amateur Radio as a recourse.
>
> As a secondary, not a primary use.

Lennie...

Only YOU and Brain keep trying to insinuate that Amateur Radio would be "primary" communicaitons source.

And PLEASE note MY comment where I SPECIICALLY STATED "...implementing Amateur Radio as a recourse"...Or do I need to define "recourse" for you?

> The Auxilliary Communications Service of the state of California
> accepts volunteers with or without amateur license and doesn't
> even consider amateur radio as a primary fall-back medium for
> large-scale emergencies.

You had better reassess using that "doesn't even consider amateur radio" comment vis-a-vis ACS.

According to one of APCO's vice presidents (who happened to be at HR04),
ACS very thoroughly utilizes Amateur Radio and Amateur Radio operators.

Since he was part-and-parcel of the organization of ACS, I'd assume he
knows...

>>> A case in point is the "other" "9/11" Attack on the Pentagon in
>>> DC....(Snip to....)
>>> After crash fire control and search and rescue was coordinated by on-
>>> site military and civilian communications, not by amateur radio.
>>
>> Lennie...why do you keep trying to make a point of this?
>>
>> No one here has even remotely suggested that it was otherwise.
>
> YOU have.

No, I've not. I've not made a single reference to the activities at the
Pentagon as it pertains to the events of Spetember 11th.

You will please cite the quote that you suggests that I did?

>>> There are no viable
>>> reports of amateur radio being used while that most definite
>>> emergency situation was happening. (In reference to the 4th
>>> hijacking...SR)
>
> "SR?" That wasn't in my post. Why are you adding things?

I "added" a clarification that you were refering to the fourth hijacking.

I stated that clearly and added my initials as evidence that it was I, not
you that put that there.

If you are so feeble as to not be able to follow that without having to
requote the ENTIRE post, then I will, but it will just eat up bandwidth.

I don't think you are THAT idiotic, but if I need to do it to help keep
you focused, I'll be glad to do it in the future.

>> However Amateur Radio WAS employed in the post-incident recovery at the
>>site.
>
> In WHAT NTSB "recovery?" The NTSB has its own investigators

> operators and military personnel.
>
> Describe this "post-incident recovery" and tell us what the NTSB
> has documented and where we might find all that for reference.

Try the press, Lennie.

Try the Pennsylvania Office of Emergency Services.

Try the Office of the Governor of the Commonwealth of Pennsylvania who
issued a letter of appreciation to ARES for thier service at the site.

>>> The "9/11" Attack is popular to espouse because of the enormous
>>> emotional impact to all Americans. But, it was an ATTACK done
>>> by other humans against all of us and definitely NOT some kind of
>>> natural event emergency or disaster. The "kamikazi" nature of
>>> this suicide attack was NOT anticipated by anyone and all were

>>Lennie...?!?!
>
> No...because the amateur radio assistance was quite small
> compared to the overall task of recovery, including the assistance
> of other volunteer groups who aided the city of New York.

And you base this "small" quantification upon what reference? You having
not read about it in the LA Times?

> The National Transportation and Safety Board does not "train
> radio amateurs" to recover crash evidence. Try not to falsify your
> exaggerations by spouting lies and assorted untruths.

The "mistruth" here, Lennie H is that you alledge that I suggested that
Amateurs "recover crash evidence."

You now have yet another lie to apologize for, Lennie.

And you can, in the same effort, cite where I allegedly said that Amateurs
were involved in "crash evidence" recovery.

Quick Lennie...an excuse...quick!

(SNIP)

No need in trying to respond to the rest of your verbose obfuscations,
Lennie...Not when you try to go directly from Amateur Radio's role in
communicaitons to discussing "debris removal", none of which had anything to do
with the topic being discussed.

Nice dodge.

> radio environment.

Generally agreed by whom?

The BPL developers don't agree. And they're professionals.

The FCC doesn't agree. They're professionals too, and regulators of all "civilian" radio and wire communications in the USA.

And why just an "urban environment"? What about suburbia? Or rural locations which will supposedly be the places where BPL will provide service not available from other technologies?

How will you or anyone else convince these *professionals* "Access BPL will be a bad thing in any urban radio environment" when they have not agreed with the calculations and first hand-observations of others?

Sure, a lot of us will file comments. Maybe they'll do some good. But just because you were finally convinced of the BPL threat, don;t be surprised if the "professionals" don't agree.

Sure there is...Just like there's a "Dill Sergeant", "Reverend Jimmy", etc
etc etc.

There's even a Lennie the Liar.

> The 911 Emergency Number plan has been in existance for far more
> that "5 years." It is a national plan. It was implemented primarily
> to handle the small-scale emergencies common everywhere in this
> United States. Such calls are the majority of situations, not "a
> very narrow slice" as you incorrectly state.

Less than 40% of ACTUAL CALLS to 9-1-1 services are bonafide
"emergencies", big or small.

In some cases the number drops to 20%.

These numbers per APCO and subject to on-going sampling.

9-1-1 has become the de facto "police" or "ambulance" number, whether or
not an emergency exists.

>> In a true "disaster preparedness" mode, cellphones may suffer all of
>the
>>bad things that you and I have said they will.
>
> Incorrect again. In a "true disaster" SITUATION (not a 'mode') the
> telephone system may be overloaded. However, the same thing

> may be said of all amateur radio in that same situation. Hypothetical
> situations are merely hypothetical, not real things.

If every Amateur licensee was on-the-air during an "emergency" occupying a discreet channel of his/her choice, over 80% of all available Amateur frequencies would be empty.

It's highly unlikely that "Amateur Radio" will be "overloaded".

> Hypotheses should reflect on objective consideration of the entire
> situation and its infrastructure. Hypotheses should not be subjective
> conjecture based on personal desires, thoughts or preferences. You
> are guilty of subjective conjecture in your disordered hypothesis.

Nope.

Cellphone and hardline common carrier services HAVE suffered network-wide failures in a number of different disaster situations.

This is not a "hypothesis" or "conjecture", Lennie.

It's happened.

>> THAT assertion is made upon the evidence that such incidents have

>>I am!
>
> Brian used the term "instrument of national policy" as a euphemism

> for military service. In this case he indicated he was no longer IN
> the military service.

Regardless of what methodology he insinutated, Your Scumminess, I am as
much an "instrument of national policy" as long as I participate in the
programs dictated by that policy, and as long as I have a vote in it, my status
as a member of the Armed Forces not withstanding.

BTW: The Armed Forces are an instrument of FOREIGN policy...Posse
Commitatus refers.

> Voting Rights are guaranteed by the U.S. Constitution and are NOT
> restricted to military service personnel. Review Amendments 15, 17,
> 19, 24, and 26 to see Voting Rights for United States citizens.
>
> If you have been discharged from military service in the United States
> then you are no longer in that military service.

I never said I was.

Only YOU keep trying to amke some inference that I am, Lennie.

>> Try again, blockhead.
>
> I am a veteran of U.S. Army service, 1952 to 1960. My Honorable
> Discharge was granted in April, 1960. I have always been a citizen

> You cannot deny the above since your attempt is public information
> and available for all to see.
>
> Why do you assume "power" that you do not have?

I "assumed" nothing.

You are free to say what you want.

I am free to counter it with my own opinion.

THAT is a guarantee of the same governmental documents that you like to
cite...remember...?!?!

> Why do you continue to post petty personal pejoratives against
> those who disagree with you?

Perhaps becasue of the same "petty personal pejoratives" who disagree with
me, Lennie...

> Seek mental health therapy. It will improve your thinking and be
> better for all of us.

Seek it yourself, Lennie.

Seems to me that it's just you and Brain that have a problem with me. And if you'd stop lying and misrepresenting the character and facts relative to Amateur Radio, you wouldn't even have that...

1652. Clarification, was: Wrong Again, Len! (Communicator Power)

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-24 15:08:07 UTC
From: Mike Coslo <mjc5@psu.edu>
Message-ID: <4061A457.6050600@psu.edu>
Source record: 89816

For those that might be interested, here is some info from the NCVEC proposal:

From Part II (Proposal), section 19. (basic framework of the new entry level license) Paragraph d.

Power limits. Limit transmitter output power levels to 100 watts on all frequencies below 24 mHz, and 50 watts on all frequencies above 24 mhz. This allows enough power for adequate communication under most circumstances, and matches the nominal power output of the largest number of commercially available transmitters and transceivers available as of this writing.

The use of these suggested power levels also removes the necessity for RF safety evaluations, as the power levels are below the stated threshold values for the frequencies concerned.

(end paragraph d)

Okay, so the NCVEC petition *does* specifically ask for restricted power on their "communicator" class license.

First, I like Carl's note on the name. Novice is so much better. It is a time honored name, and although some may think this superfluous, it looks good in print, and sounds good too. I like having just two easy to say syllables, instead of 5!

Second, there is enough bad about this proposal that I pretty much reject it out of hand.

That's ok, you've got a comic partner in me, Mike. Besides, if there's anything I've learned on the CW bands...it's that nobody seems to laugh at anybody's code. Quite the contrary, they all just want to help put a newbie at ease.

I happened upon a station that was working a contest one morning and I figured "what the heck, I'll give 'em a call. (Mind you that I had no idea he was working a "test" as it was 4 AM and the band was still empty.) Well, when I realized and expressed concern about wasting his valuable contesting time just to say hi, he replied (nice and slowly) "always time to welcome a newcomer."

73 de Bert
WA2SI

BTW, I'm halfway through toward my WAS...with 5 Watts, amazing!

The power limit is about RF exposure and the need to do the evaluations.
This is something that I think can reasonably be considered beyond the
"beginner" level, as it requires a foundation in a number of areas.

We can't expect the newcomer to learn EVERYTHING before then
can get on the air ... compare the Novice tests of years past with their
small number of questions and study guides with a dozen or less pages
to "Now You're Talking," which contains 200-some pages and it's clear
that "the bar" for entry has increased greatly from the entry level tests
that
I and many others took those many years ago ... the proposal is not a
"dumbing down" for the entry level ... it's an attempt to rationalize
beginner level tests and beginner level privileges, while providing an
incentive
(gee, I hate to use that word, since the incentive used to be keyed to Morse
proficiency more than anything else) to learn and advance.

[snipped the rest where we seem to be in fundamental agreement]

I correct myself. There are FOUR RMs released.

RM-10869 is a page and a half proposing to reinstitute morse code
testing by Ronald Lowrance, K4SX.

RM-10867 is from the beloved ARRL...
RM-10868 is from the "grassroots organization" Radio Amateur
Foundation...
RM-10869 is from K4SX representing (apparently) himself...
RM-10870 is from the NCVEC.

>(Len Over 21) writes:
>
>>It's generally agreed that Access BPL will be a bad thing in any urban
>> radio environment.
>
>Generally agreed by whom?

ARRL, FEMA, NTIA, the remaining amateur radio publications, just
for starters. :-)

>The BPL developers don't agree. And they're professionals.

Capitalists first. They want their slice of the "broadband" pie.

Why are you trolling like you WANT Access BPL?

Did you change professions into the Access BPL arena?

>The FCC doesn't agree. They're professionals too, and regulators of all
>"civilian" radio and wire communications in the USA.

Incorrect. See the Communications Act of 1934 and the Tele-
communications Act of 1996 as to exactly what the FCC can
regulate.

Unless an Access BPL system goes across state borders, about
all that the FCC can regulate is the incidental RF radiation from
the system. Incidental RF radiation is a main subject in Part 15,
Title 47 C.F.R. Part 15 doesn't deal in "communications" systems
and NPRM 04-29 is only about revisions to Part 15.

>And why just an "urban environment"? What about suburbia? Or rural locations
>which will supposedly be the places where BPL will provide service not
>available from other technologies?

"Suburbia" is a part of the urban environment.

Try not to hurt yourself playing little trolling word games.

Feel free to list all the rural areas in the United States along with all
the inhabitants thereof. That's only about 3% of the population, should
not take you too long in here. :-)

Where are the existing Access BPL test sites now? Are those in
"rural areas?" [no, they are not out there]

>How will you or anyone else convince these *professionals* "Access BPL will
be
>a bad thing in any urban radio environment" when they have not agreed with the
>calculations and first hand-observations of others?

You seem heck-bent on starting some more internecine warfare in
here. In that case you are wasting everyone's time. :-)

You are rejecting the ARRL Laboratory findings on Access BPL test
sites. You are rejecting several commenters on 03-104 who have,
independently shown calculations based on their own thinking.
You are rejecting the feelings of - literally - thousands of other U.S.
radio amateurs who think that Access BPL is going to be BAD for
their residential and mobile amateur radio operations.

Why do you want to sit back and welcome BPL?

Don't you want to "work" the HF ham bands from 80 meters and
up?

I guess not.

All you want to do is sit in here and troll for newsgroup word fights.

Not nice dedication to your "amateur community."

>reject it out of hand.

You can troll here or you can submit Comments to the FCC on
RM-10870. Which will be the more effective on the "amateur
community?" :-)

Since the NCVEC petition rejects the morse code test for all
classes, that should be an excellent reason for you to reject it.
[you are PCTA]

You might consider a Comment on Petition RM-10869 [by K4SX]
whose primary proposal is to have morse code testing for all
amateurs. It's only a page and half out of the ECFS.

The real oddity is how this situation came about. Once the no-code
technician license was introduced, people chose to take the route of
studying the 200 page book to get the no-code tech license rather than the
much simpler Novice written and simple 5wpm test. It was the beginners
themselves who changed the Tech to a beginner license by choosing to bypass
the Novice. People are strange.

Hello, Jim

Well, let's find out how well BPL works with 100 to 200 watts (don't need a
KW +) into a dipole in an urban environment. It will be *their* problem.
The sword cuts both ways ;)

I agree with making priveleges granted keyed to tested knowledge.
Arbitrary requirements were always an embarassment to try to justify.
I felt so sorry for all the feeble attempts of the PCTA to try to do
so.

Steve, perhaps it's """9-1-1""" on your telephone, but when I enter 9
dash 1 dash one, I get a recording saying that the number I dialed is
not in service.

> Not every call to Fire, Police or EMS rates a 9-1-1 response.

It is here.

> Do you know the difference? Do you KNOW what's an "emergency" as opposed

well).
> >
> How about "Basic"?

I still prefer "Novice" ... anyone who's more than a beginner technically
will
probably go straight through to General, or even Extra, in one sitting.
Anyone
who's truly a technical "newbie" and needs to learn more should not be
offended
by the class name Novice.

It's been around a long time, still fits, and is recognized worldwide - some
other
countries even have a beginner class called Novice.

> What do you think of this idea, Carl: NCVEC proposes that, rather than
have a
> lot of regulations questions in the "Communicator" pool, that they be

> a copy of Part 97, have read it and will abide by it. This is proposed so
that
> the "Communicator" test and its pool can be made smaller.
>
> Is that a good idea?

It's clearly a "learn as you go" proposition any way you look at it ...
NOBODY knows
everything there is to know from day one.

Since the rules can be looked up (just as one can use a "crib sheet" to
remember sub-band
edges) it seems to me that its not an unreasonable proposition. I'd rather
have someone
know a bit more about radio and operating and have to refer to the rules as
they learn to
make sure they did things "by the book" than to shortcut the *basic* theory

and operating
practices.

However, having said that, I personally much prefer the ARRL proposal to the NCVEC one
for the following reasons:

1) less conversion of CW/data space to SSB
2) I don't like the "commercial gear only" part of the NCVEC petition because it unnecessarily
discourages homebrew and tinkering - something that novices have *always* been allowed (and
encouraged by 97.1) to do.
3) I don't like the "low voltage" only part of the NCVEC petition, because it precludes the new
ham from getting a good hamfest deal on an older rig like FT-101, TS-520/820, etc. for no good
reason (nothing stops them from building power supplies that use 110VAC or 220VAC on the
primaries, so what's the sense in this proposal.
and,
4) I don't like the NCVEC to "put the mark of Cain" on the newbies with a special, never-used
callsign block that makes them stand out as targets for those who are disgruntled with ANY change.

73,
Carl - wk3c

"William" wrote ...

I could be wrong, but I think only school teachers and the ARRL's W1AW
Operator are allowed to be paid while using amateur radio.
_____

I understand your point, but the intent of this section in the FCC rules was
to stop Ham radio from being used for commercial purposes, not to prohibit
emergency communications. Nothing in the rules prohibits use of this
equipment during an emergency by any licensed person. Or for that matter,
any person whatever. As I said, our Ham equipment is being used for
redundancy, so for all practical purposes, it will never be used for routine
communication -- other than testing to ensure it is working properly.

If I wanted your resume, I would have asked for it, Leonard. It seems any time that someone challenges your 1950s understanding of electricity, you break out that tired old resume. (yawn)Who cares what you did in 1950? -- I sure don't. For your information (since you apparently don't know) the VTC/Scotty is applied across the military services in a wide variety of applications. I don't suppose you know what a "Blackberry" is either. Oh, wait --- I'm sure you do since you are so up to snuff on all the new technology. Oh that's right, they didn't have that kind of technology in 1950. Well, I guess you'll just have to continue "astounding" us with ancient electrical theory.

There may still need to be *some* evaluation done even at the 100/50W power
level, but they are simplified compared to what needs to be known for the whole
raneg of amateur power/frequencies.
>
>We can't expect the newcomer to learn EVERYTHING before then
>can get on the air

I agree 100%! That's the whole point of multiple license classes. It's not in
the best interests of amateur radio to require all newcomers to pass the Extra
just to get started.

>... compare the Novice tests of years past with their
>small number of questions and study guides with a dozen or less pages
>to "Now You're Talking," which contains 200-some pages and it's clear
>that "the bar" for entry has increased greatly from the entry level tests
>that I and many others took those many years ago

No it's not clear at all! In fact, it's an apples and oranges comparison.
Here's why:

Books like "Now You're Talking" are meant to be stand-alone study guides. They
contain the entire question pool, with explanations of each question and how to
get the answer. And much more.

The old License Manuals were not meant to be "one stop" books. They focused on
the license process only - where the tests were held, the process, etc. The

"study guides" were *not* the actual Q&A, but rather *essay* questions intended to indicate the areas to be tested.

If you really want to make a comparison, take an old ARRL License Manual, add on "How To Become A Radio Amateur", "Learning The Radiotelegraph Code" and "Understanding Amateur Radio" and you'll begin to have an apples-to-apples comparison.

Or consider these questions from the 1976 ARRL License Manual:

Study Question #31:
Draw a schematic diagram of a circuit having the following components:
(a) battery with internal resistance,
(b) resistive load,
(c) voltmeter,
(d) ammeter.

Study Question #32:
From the values indicated by the meters in the above circuit, how can the value of the resistive load be determined? How can the power consumed by the load be determined?

Study Question #33:
In the above circuit, what must the value of the resistive load be in order for the maximum power to be delivered from the battery?

Study Question #34:
Draw the schematic diagram of an RF power amplifier circuit having the following components:
(a) triode vacuum tube,
(b) pi-network output tank,
(c) high voltage source,
(d) plate-current meter,
(e) plate-voltage meter,
(f) rf chokes,
(g) bypass capacitors, coupling capacitor.

Study Question #35:
What is the proper tune-up procedure for the above circuit?

The above were just *some* of the study questions for the *Novice* exam of 1976. Took up less than a page. How many pages of explanation would it take to teach the above material?

The actual exam did not use these questions. Instead, it might show, for example, a schematic of the amplifier circuit similar to, but not exactly like the one shown in the license manual, with 5 of the components labeled "a" thru "e". The question would be something like, "which is the coupling capacitor?" "which is an rf chokes?" "what is function of the capacitor labelled ''d' in the circuit above?"

And that's at the *Novice* level.

Does anyone think that the current entry-level exams are tougher than that?

> ... the proposal is not a
>"dumbing down" for the entry level ...

The NCVEC proposal definitely *is* a dumbing down. The ARRL proposal is much better because it does not set a precedent of no homebrewing, etc.

The "signed statement" thing of the NCVEC proposal is really, really bad.

They didn't bypass Novice since they had to pass the written before
2000. The testing to get to tech was divided into two written elements.
What many bypassed was the code test. If Novice was nocode with
VHF access, especially to 2m, I'd bet there wouldn't have been anywhere
near the number of techs we have today.

That's probably what some of the old guard are trying to do. They are most
likely filing spurious petitions to delay the inevitable.

Wrong...see below.

> If you really want to make a comparison, take an old ARRL License Manual,

The "old ARRL License Manual" was all anyone needed to pass the
tests in the late 50s. Novice material was covered in 4 or 5 pages and
General/Tech was about 12/16 pages. NO other info or books
were needed.

add
> on "How To Become A Radio Amateur", "Learning The Radiotelegraph Code" and
> "Understanding Amateur Radio" and you'll begin to have an apples-to-apples

AND the study guide included the diagram. I memorized all 15 "draw a
diagram"
answers for the General written. 5 of those EXACT questions were on the
General written I took in 1958.

> Study Question #32:
> From the values indicated by the meters in the above circuit, how can

All you needed to know was the formula...and that was in the study guide.

> Study Question #33:
> In the above circuit, what must the value of the resistive load be in

Sorry, but I think they should have to learn both. If you have a ham
licence you should _know_ the rules at least for your own class of licence,
period.

>
> However, having said that, I personally much prefer the ARRL proposal

But it still falls well short of the amount of phone allowed in the IARU
Region 2 (North and South America) bandplan. Try reading that particular
document. You may find that it's an eye opener.

> 2) I don't like the "commercial gear only" part of the NCVEC petition

I said they elected to use the no-code Technician as their entry to ham radio rather than the Novice license. Yes they took the Novice written but not the code. Thus they "bypassed" the Novice license in the sense that they never held a Novice license. They had basically two choices to enter ham radio (unless of course they chose to do additional study and sit for higher class tests at the same time).

1) They could take (and pass) the Novice written plus 5wpm and get a Novice license.
2) They could take (and pass) the Novice written and Tech written and get a no-code Tech license.

The prospective ham generally took the route 2 to enter ham radio rather than route 1. Thus by that choice, the people themselves made the Tech no-code the entry level license despite the fact that it was more difficult than earning the Novice license. The restructuring in 2000 merely formalized what had already occurred.

Having earned my initial license in 1992 (Tech with HF), I'm quite familiar with what was going on. The majority of people sitting for their first license took the Tech no-code route to put off learning the code not because of its two meter and VHF access. Prior to on-air experience, they simply were not personally familiar enough with various ham activities to select their entry route on the basis of the desireability of having 2m access.

Oh I doubt that. It's more likely that everyone knows a change is coming one way or another and views this as an opportunity to shape the requirements to their own individual visions.

Now I can legitimately bitch and complain. I went the Element 1C route,
passed it and got my Extra and access to everything. I guarantee the
voice bands will be filled with nitwits who can pass the theory exams by
rote memorization should they completely eliminate the code requirement.

Doesn't really matter anyhow. Amateur Radio as we know it is under
serious threat from any number of sources. And it has become easier to
communicate with someone via a cable modem or phone line. I regularly
correspond with people in Asia and Europe on the net and it's reliable.

So enjoy it while you can. It won't last long.

>technology.

A lot more than you ever to admit...or concede.

>Oh that's right, they didn't have that kind of technology in
>1950.

True enough. The transistor was invented in 1947, took a half
decade or so before they became practical enough to use.

Faster than the vacuum tube invention to practical, useable
tubes, all without some fantastic improvements in metalurgy
and quality control required in solid-state electronics.

>Well, I guess you'll just have to continue "astounding" us with
>ancient electrical theory.

You would be "astounded" to learn Ohm's Law well enough to
apply a resistor in an electrical circuit. Ohm theorized his Law
of Resistance (often misused as "Ohm's Law") way back in time,
probably before radio was first demonstrated as a communications
medium.

James Clerk Maxwell and Oliver Heaviside formulated enough laws
to later explain radio propagation, also before 1896. How about
Ampere' and Volta? Or even James Watt? Heinrich Hertz?
All "ancient" in your terms of reference. All RELEVANT TODAY.

Prove those fundamental laws don't apply today because you
don't like "ancient" stuff.

Go ahead, call a ham in Iowa on CW. Maybe he can help you.

Then QRT.

Yes, isn't that strange?

Some folks just don't like to be tied down to 1930s standards and
practices, wanting to live in this new millenium rather than the old.

Yes. For decades I've worked with people who were interested in
electronics and radio, so interested that they made that their
career choice and never once tried to get an amateur license.

Isn't that strange to you? I'm sure it is...

Back in the olden days before Bash published his books, I imagine that
some ham clubs
had compiled remembered questions from FCC tests. To help members
upgrade. And
I suppose someone had snuck a peek at those mail in novice and tech
tests before the FCC
said everyone had to test at a field office (Early 1976 they decreed
that, so I had to test
at the FCC).

>
A few questions on electrical safety and procedures on the test should
address this issue.
Besides, other than an FCC inspector paying a visit, how could be
enforced? The FCC
doesn't have the budget for that. Output power can be limited to say
100W. Easier to
enforce, as signal strength can be measured remotely (not foolproof,
maybe his beam is
aimed right at you). The power limit would avoid the RF exposure issue.

>and,
>4) I don't like the NCVEC to "put the mark of Cain" on the newbies with a
>special, never-used
>callsign block that makes them stand out as targets for those who are
>disgruntled with ANY change.
>
The old Novice licensees got WN#XXX callsigns to designate them as
novices. Other than a
few bozos, everyone accepted them as legit hams. When you upgraded to
general, the FCC
replaced the N with A or B in your callsign. The FCC must have had an
internal use only
note as to which you'd get when they issued your novice call. Today, you
could get a vanity callsign with the
WN if you want, even if you're an extra. Wonder if WN2ISE was ever
issued? Someone did
have WA2ISE before I was issued it in 1976, as a tech (general written
and 5wpm).

> the Novice. People are strange.

I took the Technician test because it had the access that I wanted.
Until I went to a few club functions and started working contests with
the higher licensed hams, I was VHF-centric.

This is part of my thoughts on the natural divide between MF/HF and
VHF/UHF. I noted that divide before I ever took a test, and many of the
Technicians I know seem to have that impression also.

And finally, Exactly WHO is the Technician test too hard for? I hear
and see people talking about this, but I really want to know who it is
too hard for?

And with the Morse test going, who is the General or Extra test too
hard for?

I find it very interesting that the NCVEC does not produce one bit of
evidence for the failure rate among those tested. If the tests are too
hard, there should be a percentage of testees that fail the tests. That
might go a long way in convincing me that they are too hard. Instead, we
hear the tests are too hard, but no hard evidence whatsoever.

The FCC also created the six-tiered amateur license structure
prior to R&O 99-412 and established 13 and 20 WPM morse
code rates. :-)

ARRL didn't do a thing, did they? :-)

This is very important. New is very cool, and fun. But so is the
vintage stuff sometimes. Those old tube rigs are very cool, most perform
pretty well, and of course many are real bargains, and allow a new ham
to get on the air for very little money. The relative simplicity also
acts as a classroom for the new ham, in which s/he can learn some RF
basics. It would be sad to give the new licensees access to HF, and not
allow them to access some of the cooler (IMO) rigs out there.

Heh, guess I'm waxing a little technonostalgic here!

> raneg of amateur power/frequencies.

I don't think that safety stops at the "station evaluation level.

One of the things that will probably happen if we get out of the mode
that makes us even think of doing safety evaluations is that the new
hams may not be thinking about RF safety at all.

"Remember, don't put the antenna of your handy talkie in the puppy's
mouth and press the talk button".

I'm no genius (ask Len) and yet I don't understand what is so hard
about RF safety that we need to almost eliminate it from the testing for
the introductory license.

If we really should eliminate it, we probably should limit the power to
something like 5 watts or so.

Sure. I'm just pretty bullish on the safety requirements.

You know, I can't answer that question very easily. I don't believe
that more questions makes for a harder test. And although I wasn't
raised on hollow state, I figured out the questions you posed after a
little enjoyable study.

The NCVEC proposal is just plain Dumb.

And I think it is also insulting toward the lowest license class.

> The "signed statement" thing of the NCVEC proposal is really, really bad.

Just like the weird thing I was supposed to sign when I bought that
C.B. rig right about the time they gave up on licensing.

People are more at risk from RF exposure using their cell phones on a
daily basis, operating at very high frequencies, where the antenna is
less than an inch from their brain than they ever will be from any ham
radio transmissions.

Bad form, Alun. One petition I have seen is of the "old guard type". The others are eliminating Morse code testing (or keeping it for the highest class, making the testing regimen easier. Seems like most of them are along the lines of what you want, not the old guard.

>>> radio environment.
>>
>>Generally agreed by whom?
>
> ARRL, FEMA, NTIA, the remaining amateur radio publications, just
> for starters. :-)

But not the Wall Street Journal, or the chief engineer of the FCC, or the Commissioners....;-) ;-)

>>The BPL developers don't agree. And they're professionals.
>
> Capitalists first.

Aren't you also a capitalist, Len? Or are you something else?

>They want their slice of the "broadband" pie.

They want the money. That's the essential definition of "professional" - getting paid.

> Why are you trolling like you WANT Access BPL?

I don't want Access BPL. I'm simply trying to figure out how to fight it. You don't seem to have any answers besides "comment to the FCC". I already knew that.

> Did you change professions into the Access BPL arena?

Nope, I'm still an *amateur* in the field of HF radio communications. And I don;t have anyhting to do with BPL "professionally".

>>The FCC doesn't agree. They're professionals too, and regulators of all >>"civilian" radio and wire communications in the USA.
>
> Incorrect.

They're not professionals? They don't get paid for what they do? I think you are mistaken.

> See the Communications Act of 1934 and the Tele-
> communications Act of 1996 as to exactly what the FCC can
> regulate.

Irrelevant to the BPL situation. FCC could prevent BPL from going forward if they wanted to.

> Unless an Access BPL system goes across state borders, about
> all that the FCC can regulate is the incidental RF radiation from
> the system. Incidental RF radiation is a main subject in Part 15,
> Title 47 C.F.R. Part 15 doesn't deal in "communications" systems
> and NPRM 04-29 is only about revisions to Part 15.

Again, irrelevant. And probably incorrect. The noise from BPL systems will clearly cross state lines.

>>And why just an "urban environment"? What about suburbia? Or rural locations
>>which will supposedly be the places where BPL will provide service not
>>available from other technologies?
>
> "Suburbia" is a part of the urban environment.

No, it isn't.
>
> Try not to hurt yourself playing little trolling word games.

Not me - you're the one who does that. I'm simply truying to figure out how to defeat BPL. You're avoiding the central issue: How can *amateurs* prevail when *professionals* are pushing BPL?

> Feel free to list all the rural areas in the United States along with all
> the inhabitants thereof.

You first, Len. My amateurish work would not meet your professional standards. ;-)

> That's only about 3% of the population, should
> not take you too long in here. :-)

If you know the answer, why do you ask the question? ;-) ;-) ;-)

> Where are the existing Access BPL test sites now?

Look them up on the ARRL website.

> Are those in "rural areas?" [no, they are not out there]
>
>>How will you or anyone else convince these *professionals* "Access BPL will
>>be
>>a bad thing in any urban radio environment" when they have not agreed with
>>the calculations and first hand-observations of others?
>
> You seem heck-bent on starting some more internecine warfare in

> here.

I'm simply asking a question. You are avoiding that question. One would think that a "radio electronics professional" with your claimed experience would know the answer, but I guess you don't.

> In that case you are wasting everyone's time. :-)

Oh no, not me. I leave that to professionals like you, Len. Wasting other people's time is something you are realy, really good at.
>
> You are rejecting the ARRL Laboratory findings on Access BPL test
> sites.

Not me. I've read them, accepted them, met and talked with people who put them together. I've commented to FCC on the issue and will do so again

It's the FCC, BPL companies, and similar *professionals* who reject them. Even *you* questioned them at first.

> You are rejecting several commenters on 03-104 who have,
> independently shown calculations based on their own thinking.

Not me. I find all of those calculations and observations to be convincing. FCC apparently doesn't. A good number of your fellow "professionls" don't, either.

> You are rejecting the feelings of - literally - thousands of other U.S.
> radio amateurs who think that Access BPL is going to be BAD for
> their residential and mobile amateur radio operations.

"Feelings"?

You've got it backwards, Len. You're wrong again!
>
> Why do you want to sit back and welcome BPL?

I don't. I've been working against it since before you even thought it was a problem.
>
> Don't you want to "work" the HF ham bands from 80 meters and
> up?

I already do. You don't.
>
> I guess not.
>
> All you want to do is sit in here and troll for newsgroup word fights.

Not me, Len. That's what you do.
>
It's clear you don't know how to convince those "professionals" any more than anyone else. You don't have any new or different arguments or evidence. You just want to lecture and criticize.

Now you'll probably respond with a lot of diversions into irrelevant minutiae, name-calling, inaccurate information, insults, shouting, excessive emoticons, your resume from a half-century ago and the rest of your usual, "professional" bag of tricks, in a vain attempt to get me to reply in kind. Wrong again, Len!

Mark's not here anymore.

Mark, like you, was a chronic liar.

Mark isn't here anymore because he got wise when we kept re-quoting those
things he insisted he didn't say, yet was right in front of him. In THAT
regard, it was the only wise thing he ever did (ie: leave)

Like I said...I don't tolerate liars. Mark was proven to be a liar.
Lennie's been proven to be a lair, and now you are.

Wadda ya know!

Only as long as you continue to tell tales that are easily proven to be
false.

> Brian, might as well give up on the gunnery nurse. All he wants to do
> is fight, fight, fight. If anyone knows Don King's number maybe we
> could get him to arrange a match? Like with Muhammed Ali?

There are a lot of things I'd rather do than fight.

In this case, I am not "fighting". All I am doing is airing out YOUR (and
Brain's) dirty laundry.

Fail to tell the truth and have it found out, and it WILL come back to
haunt you.

Then you obviously don't know about tiered dispatching. (Why am I not surprised?)

Also, most 9-1-1 centers are trying to make it well known that they want people to use 9-1-1 for TRUE emergencies...bleeding, robbery-in-progress, smoke/fire, etc...The cat in the tree or the broken window don't rate a Code 3 response.

You've made another assertion of fact, Brain.

That assertion would be, in most cases, the rendering of a diagnosis,
which requires a degree as a medical doctor.

Are you now telling us that you are a medical doctor?

Please cite what criteria you base this diagnosis on?

That I have labled you a liar after having presented you with your own
words only to have you try and deny it...?!?!

Or that I have labeled you a liar becasue you've made OTHER assertions of
fact for which you refuse to corroborate with some reasonably valid
documentation?

I already stated that I won't give it here. It's not pertient to the forum.

You, on the other hand, have made statements of fact in this forum about topics relative to the forum, yet refuse to corroborate.

You've even had the cajones to deny you've made statements even when provided with the verbatim quotes. Now that's REALLY stupid, but it's status quo for you.

Now...WHAT "major role" do the unlicensed services provide in "emergency comms"...?!?!

Or are you the liar I have asserted that you are?

Even with an Element 1 test, there would probably be a lot more novices
if there had been VHF access. Conjecture of course.

No argument there. I hope that newcomers won't try to use their HT's
like they do a cell phone, presses up against the ear.

Maybe *another* safety question?

I dunno, Mike...

Novices were given 220MHz priviledges along with some (dubiously) adequate
10 meter phone priviledges and it sputtered to a halt almost as quickly as it
started.

I was in SoCal when "Novice Enhancement" took effect, and one can hardly
argue that there is a dearth of repeaters on that band in that region...even
that, very little additional activity was heard. I think I worked a half dozen
Novices on 220 in the year after it was implemented.

HF is the spectrum everyone wants to play on, all of the wizz-bang
technology that's sprouting up on V/UHF notwithstanding.

Any carrots we wish to put in front of the new-licensee cart are going to
have to be 1.8 to 29.7MHz flavored carrots, I think!

Wow. What a troll. This is sure to generate a huge thread.

1719. Re: Truckers on 10 meters not a problem

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-25 16:39:13 UTC
From: Twistedhed <twistedhed@webtv.net>
Message-ID: <c3v1vh$m8b$1@news.x-echo.com>
Source record: 89783

The fact of the matter is, there are only a super
small percentage of truckers on hammie bands.
They are not responsible for any enforcement
"emphasis". In fact, the only "emphasis" appears
to stem from self appointed radio kopps on patrol.

There is no real "emphasis" on anything at the FCC.
Compare the stats from last year, or the year before,
or the year before that. The hammie busts are the
same, the unlicensed busts didn't budge,
and the only FCC radio related enforcements that
have increase in any manner is the amount of fines
levied against commercial radio stations.

Freebanders do not intrude on hammie bands.
Since there are so many hellbent on painting
freebanders with a wide brush, this
would be a good time to educate you on that of
which you are so deluded. Freebanders, at least
the ones I have come across and associated with
since the seventies, are for the most part,
meticulous operators who are very polite and are
comprised of operators, both licensed and
non-licensed, from around the world.

They are for the most part, courteous and
non-intrusive and do NOT intrude on hammie bands,
despite your best attempts at presenting them in
the same light as hammie band invaders.

Parts of 11 meter ARE licensed to various entities
who have chosen to abandon their choice of spectrum.

Same as a vacant lot..cops drive by and see a
bunch of kids playing football or baseball in a vacant
lot,,,yes, the cops know they can technically arrest
the kids for trespassing, yet they use their sound
judgement, as the children are not damaging
anything andthe owner did not compaint, no
action is taken.

You are akin to the little old lady who watches
unsupervised children playing a sandlot game and
continuously calls the cops about the noise
they are making (children laughing) and the
remote possibility that your window MAY get broken.

Thank GOD the FCC adopted a sane approach to
such activities and does not share your position.

The 'cancer" is in self-appointed monitors like
yourself. You're still pissed 'cause we can DX
HF and you're stuck on your self-ruined freqs.

'your' frequencies aren't all that great the last time i listened either,
lots of intentional qrm and other nasty stuff... and at least i can dx and
not have to hide behind some fake 'callsign' or dumb handle.

In fact, some of them are either redundant or followups. Note that the
No Code International and NCVEC petitions that have closed are
virtually identical. Why didn't NCVEC wait until they had all their
ideas together and submit just one petition? That's what ARRL did ;-)

Hans, K0HB may yet submit a petition, too. It won't be an "old guard"
type.

It should be noted that there is plenty of precedent for this, too.
There were no less than *11* petitions that got RM numbers way back in
the 1960s, leading up to "incentive licensing".

Reckon FCC thinks THIS is important? LOL!

J

FEDERAL COMMUNICATIONS COMMISSION
ENFORCEMENT BUREAU
ATLANTA OFFICE

March 19, 2004

CB Sales and Service
FILE No.: EB-04-AT-024
ATTN: Mr. Jim Norton
Sent via Certified
190E Lenlock Lane
Return Receipt requested and
Anniston, AL 36206
First Class mail

CITATION
No.: C200432480001 Released: March 19, 2004
By the Enforcement Bureau, Atlanta Office

1. This is an Official Citation issued pursuant to
Section 503(b) of The Communications Act of 1934, as amended
(``Act''', 1 to Mr. Jim Norton, owner of CB Sales and
Service, Anniston, Alabama, for violation of Section 302(b)
of the Act, 2 and Section 2.803(a)(1) of the Commission's
Rules.3

2. An investigation by the FCC's Atlanta Office revealed that on March 11, 2004, you offered for sale at your retail store located at 190E Lenlock Lane, Anniston, Alabama, eight models of non-certified Citizens Band transceivers, namely, a Galaxy model DX66V, a Galaxy model DX 73V, a Galaxy model 48T Big Rig Series, a Galaxy model DX88HL, and a Galaxy model DX77HML, a Galaxy DX44V, Galaxy DX33HML, and Galaxy model DX99V. According to Commission's records, these devices have not received an FCC equipment authorization which is required for Citizens Band transmitters marketed in the United States. Furthermore, these devices bore no FCC equipment authorization labeling that is required for Citizens Band transceivers marketed in the United States.4

3. Section 302(b) of the Act provides ``{n}o person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section.'' Section 2.803(a)(1) of the Rules provides that ``...no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless: (1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labeled...''
Jim Norton's CB Sales and Service's offer for sale of these devices violates both sections.

4. Additionally, dual use CB and amateur radios of the kind at issue here may not be certificated under the Commission's rules. Section 95.655(a) of the rules states: ``...
({CB} Transmitters with frequency capability for the Amateur Radio Services....will not be
certificated.)'' See also FCC 88-256, 1988 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id., and thereby deter use by CB operators of frequencies allocated for amateur radio use. Five of the Galaxy model CB transceivers previously mentioned were identified as having the modification done to enable dual use of CB and amateur frequencies. These units were Galaxy DX66V; Galaxy DX73V; Galaxy DX48T; Galaxy DX88HL; and Galaxy DX77HML.

5. Furthermore, the Commission has revised Section 2.1204(a)(5) of its rules to prohibit all marketing and/or offering for sale in the United States of such devices even when the purchaser(s) had provided assurances that the transceivers are being bought solely for export. ALL

DOMESTIC MARKETING OF SUCH DEVICES VIOLATES THE
COMMUNICATIONS ACT OF 1934, AS AMENDED, AND THE COMMISSION'S
RULES.

6. Subsequent violations of the Communications Act or
of the Comission's Rules may subject the violator to
substantial monetary forfeitures not to exceed $11,000
foreach such violation or each day of a continuing violation,
seizure of equipment through in rem forfeiture action, and
criminal sanctions including imprisonment.

7. Mr. Jim Norton may request a personal interview at
the closest FCC location to its place of business, namely:

Federal Communications Commission
3575 Koger Blvd., Suite 320
Duluth, GA 30096

which can be contacted by telephone at 770-935-3370. Any
written statement should specify what actions have been taken
to correct the violation outlined above. When corresponding
with the Commission, case number EB-04-AT-024 should be
referenced.

8. Any statement or information provided may be used by
the Commission to determine if further enforcement action is
required. Any knowingly or willfully false statement made in
reply to this notice is punishable by fine or imprisonment.

I hope that's true. Note how vague the NPRM language is about how
interference is to be mitigated.

Wrong *again*, Len!

The K4SX proposal does *not* propose "morse code testing for all
amateurs".

It proposes no code test for Tech, 5 wpm for General, 13 wpm for
Extra.

>It's only a page and half out of the ECFS.

And yet you mis-state what it proposes. Unless you don't consider
Techs to be amateurs....

In article <4062648E.50209@ix.netcom.com>, Robert Casey <wa2ise@ix.netcom.com>
writes:

>Back in the olden days before Bash published his books, I imagine that
>some ham clubs
>had compiled remembered questions from FCC tests.

Beginning in the early 1950s there were several hardcover
"Q & A" books published on ALL the FCC license exams
plus several other areas of licensing exams by other
agencies. Those had "typical" exam questions in them
including some "typical" schematics required to be drawn
during FCC exams.

A bookstore in my home town had amateur radio Q&A books
but not the Commercial radio license variety back in 1956.
I skimmed through one a friend had, saw enough to decide
that the theory part wasn't needed and didn't buy one. I
borrowed the loose-leaf-bound FCC rules from a nice person
at a broadcast station over a weekend and crammed,
memorizing the regulatory parts which were new to me.
Not a problem. Passed the two-hour test in one sitting
at the Chicago FCC field office. Four written examination
parts in successive order, a general sort of test first for
FCC organization and scope (rather short), followed by
successive parts for Third, Second, and finally First
Class Radiotelephone (Commercial) Radio Operator.
Radiotelegraph written test was about the same; three
in the office were taking that plus the annoying, audible
code cognition tests in the same room at the same time.

Back then all the FCC regulations came in loose-leaf form
with extra revision-subscriptions, all available from the
Government Printing Office. Took at least a week to get
a surface mail order back from DC. No Internet then, no
"free downloads" from GPO within seconds. No instant
test results forwarded direct to DC either...went by surface
mail from field offices and DC sent licenses back. Slow
movements in all directions.

The Dick Bash printing organization was a late-comer among
the general "Q&A" publishing group (never a large one). The
surname has emotional connotations handy for those who
need to have something, anyone to "bash" due to whatever
frustration those people have. Oddly, no one seems to bash
the ARRL for publishing essentially the same sort of material

long before the Bash company did its thing.

>
>> In that case you are wasting everyone's time. :-)

NOBODY has EVER worked with ANY sort of "antenna" that
stretches for miles...and has randomly-distributed "feed points"
from discontinuities all along both overhead and underground
electric power lines. That would be the case for Access BPL.

That observation isn't rocket science. It can be done by anyone
in the vicinity of overhead power lines...and trying to find a
reference to such long-stretching antennas in the best library
anywhere (nothing there).

Trying to come close to a computer model, even with Roy
Lewallen's excellent EZNEC might be done...but only for one
specific community area. THINK. The electric power lines
WERE NEVER DESIGNED AS HF-VHF TRANSMISSION
LINES. They work okay at 60 Hz. 60 Hz doesn't worry about
VSWR or discontinuities and those lines only need to worry
if a splice or other connection conducts and that everything is
insulated that should be insulated.

The electric power distribution lines don't even come close to
having any sort of constant impedance. LOOK. THINK about
observated spacings in overhead systems you can see at any
time there is sufficient light. Do you see uniformity? None
there. Go to another location and observe. Do you see any
uniformity to the first location? Maybe. Try another community.
Is that uniform? ELECTRIC POWER DISTRIBUTION LINES IN
CITIES WERE NEVER DESIGNED AS HF-VHF TRANSMISSION
LINES. THERE IS NO ELECTRIC STANDARD ANYWHERE
THAT SAYS THOSE MUST BE RF TRANSMISSION LINES.

If you can't understand that, then you are just wasting time for
everyone with trying to troll for arguments in here.

Now pull out your two degrees, wipe the dead ivy leaves from them and show how YOUR "professionalism" says the Access BPL will be safe and amateurs (or anyone else) won't have to worry...go ahead, make everyone's day...

>
>But you're still nuts.

But you've not explained why.

You've again made an assertion of fact without explaining what those facts supposedly are.

I, on the other hand, have repeatedly re-posted YOUR words from these threads proving that you DID say what you alledge you DIDN'T say.

In other words, you've been caught lying, and now you're digging yourself in deeper.

You've proven yourself to not be truthful.

In light of this, how is anyone to accept anything else you say as being valid unless you provide adequate validation at the time you say it?

Your only "proof" that I am "nuts" is that I keep insisting that you stand up like a man, admit your error and take what's coming to you.

I guess you're just too stubborn or proud (both?) to realize just how far up your "stock" would go, having already been proven to be incorrent, if you'd just do the right thing.

But you won't. I guess I AM nuts for hoping you'd be "a stand-up guy".

Let's face it boys, BPL is comming at us like a fast
freight train rolling thru the Utah Badlands on the
Southern Pacific. (..or is that the Burlington Northern?)

It will turn up in your neighborhood if you're in the suburbs.

Consider THIS however...can you imagine the SUPRISE
and SHOCK (..hint) when all those folks who signed up
for BPL are all online when the first Spring or Summer
thunderstorm rolls thru...????

Think of it 4 a moment.............

It sure is going to be as *amusing* as a Baby Ruth bar in a punchbowl
at a Bar Mitzva, when all your dumbsh-t neighbors get their PC's
other "BPL ready" hardware fried-to-a-crisp when a lightning bolt from
above hits the power pole 1/2 a mile away and blows the crapola
out of every PC that's plugged into the outlet for **miles** around !!

BZZZZZZAPPP!!!!!!! POW-POP!!!
....."WHAT HAPPENED ?!?!?"

(..and I will bet you dimes to doughnuts that the local utility
will bury a tough *non-liability clause* into the 2mm tall fine print when
they sign up for BPL internet service, absolving themselves for all surge
related damage because the average person will think they are "safe".
when that happens, watch everyone dump BPL like it's a used ford car)

1739. Ham interference TO BPL

Gentlemen (and other denizens of RRAP :-)

Suggestions of deliberate interference to ANYTHING (including BPL, which under the
law has no right to protection from licensed services) will NOT make any friends for us
at the FCC, on Capital Hill, or in the court of public opinion ...
especially when all of
those venues are mostly ill-informed on the real nature of the problem ...

If these suggestions, even if offered in jest, get into the hands of the BPL spin doctors,
they will not hesitate to publicly tar and feather the amateur radio service, at the FCC,
to Congresspersons, and as widely as possible in the press (and we know how the press
likes a controversial story, don't we?)

PLEASE, I implore you - drop these concepts from public venues like usenet! You will
do FAR more harm than good.

We MUST "take the high road" on the BPL issue ... that doesn't mean rolling over and
taking it ... but it does mean not shooting ourselves in the foot with such irresponsible talk.

A friend got to see something of this sort about 20 years back, at one of the federal labs (Berkeley or Livermore) in California.

The campus had a big ring of 3-phase HV distribution lines, with feeders out to xfmrs for each building. When Ethernet came along, some bright spark laid it in the same ring.

So here are these two Very Large 1-turn transformers, one turn being as much as 33KV (or so) away from ground and carrying Lots Of Current. Mostly the phases are balanced so not much current gets induced in the other turn.

Until, that is, one phase of the 33KV faults to ground and the currents get Extremely Unbalanced for a few hundred milliseconds, and most or all of the Ethernet adapters get tested for 33KV tolerance.

Fire came out of lots of equipment.

--
Another of my pet peeves is the use of random special characters in names, e.g. SQL*Forms. I pronounce that one "squeal splat forms" - sort of sounds like roadkill, doesn't it?

We call them "tract mansions"..... <ggg>

We have a half-dozen of them going up near here in an area that was
last developed twenty years ago. Just for yah-yahs I'm going to
check out the CC&Rs after they are open for sale.

it won't be any worse than the hits that modems already take from phone
lines, or that cable modems get from their systems, or that computers
without surge protectors get hit with now... it may even be better as they
are likely designed with that in mind anyway. the one that will be more fun
will be to watch the bpl tech try to diagnose a problem in the neighborhood
when a m/m contest station fires up at 0000z on friday night and shuts down
the whole area.

Similar issues with dial-up modems on the phone line have existed for
years. Lightning
gets on the phone line also. Besides a spike that can blow up a BPL
modem would
likely fry the PC power supply anyway.

The RFI from thunderstorms should make life interesting for BPL users....

BPL is the most evil thing to come along since communism!

1745. How secure is BPL anyway?

Newsgroup: rec.radio.amateur.policy

Are the BPL provides going to encrypt their signals? It is
possible that these bozos, thinking that there is no "significant"
leakage, are not going to do encryption.

Best tell potential users that BPL is not a secure system, and that
someone could find out your credit card numbers and such if
you order something on line.... Because it "broadcasts" that
info into the air.

It will be a shared medium, just like cable provided internet service.
As such they can implement Baseline Privacy and encrypt the downstream
to a specific modem. Don't know if it allows for encryption on the
upstream.

> LINES. THERE IS NO ELECTRIC STANDARD ANYWHERE
> THAT SAYS THOSE MUST BE RF TRANSMISSION LINES.

I know all that, Len. I knew it way back in my Novice days, I knew it when I first read about the BPL concept.

The question isn't *why* BPL is a bad idea. The question is how *amateurs* are supposed to convince the *professionals* that BPL is a bad idea.

Should we do it by the methods you demonstrate, including the shouting (all capitals)? Is that the way you professionals interact?
>
> If you can't understand that, then you are just wasting time for
> everyone with trying to troll for arguments in here.

I understand why BPL is a bad idea, Len. That's not the problem.

The problem is how to convince the FCC. For example, consider these quotes from the Wall street Journal:

"The FCC and the utilities say new technologies have eliminated the interference and accuse the hams of exploiting the issue for their own gains."

'"We haven't seen the sun darken and everything electrical turn to white noise and haze during a deployment," says Matt Oja, an executive at Progress Energy, whose test Mr. Powell visited. "This is a fairly vocal group that has been whipped into a frenzy by their organization." (ARRL).'

Or how about this one:

'Ed Thomas, the FCC's chief engineer, says the commission has spent a year listening to the hams' concerns about power lines and is getting frustrated. "Why is this thing a major calamity?" he says. "And honestly, I'd love the answer to that."'

That's the *chief engineer* of the FCC saying that. Here it is again:

"Why is this thing a major calamity? And honestly, I'd love the answer to that."

How do *amateurs* convince Mr. Thomas that BPL *is* a major calamity?
>
> Now pull out your two degrees, wipe the dead ivy leaves from
> them and show how YOUR "professionalism" says the Access
> BPL will be safe and amateurs (or anyone else) won't have to
> worry...go ahead, make everyone's day...

I've never claimed anything of the sort, Len. You're wrong - again...

Sheesh, Leonard. We don't use much in the way of milspec electronics anymore. The new theory adopted by the armed services in 1994 relies heavily on commercially available gear. The day of everything having to be milspec is long gone. The FAR "requires" that we use commercial gear when available, or modify it where possible for that use. "A key goal of federal aquisition reform is to maximize the use of commercial supplies and services. the FAR requires activities to explore the use of commercial items to meet their needs." I learned this when I was being certified as a COR on a 6 million dollar contract. Nearly everything that we aquired for use in EM was either strictly commercial gear, or adapted from commercial gear. (as per the rewuirements of the FAR)

The VTC is video teleconferencing. And a very good place to start would be:

WOW, I'm impressed. Leonard has made it out of the 1960s. Very good. BTW, it's also favored in the Pentagon.

> Do you know what a "raspberry" is? Here, have one from me

For someone that eschews personal attack so often, you seem to be very good at it.

I just wanted to add that there are always exceptions to the rule. Two that I can think of, right off hand, would be the Space Shuttle Crew (obviously government employees) and Federal, State, and local EM directors and staff (many of whom are Hams). Do you really think either of the aforementioned would not be allowed to use their privileges because of part 97?

joxendi@bellsouth.net (Jerry) replied:

>They are making their case against the sale
>and use of these so-called "export" radios
>inside the USA. Actually, it WAS the issue of
>unlicensed users of the Amateur bands that
>caused the curent enforcement emphasis.

Actually, Riley was a quoted on several occasions as saying hammie
complaints and local jurisdictions (in regards to HR #whatever)
being
informed of their ability to react to interference was the catalyst. I
know you have this thing about truckers interfering on hammie bands,
but
the fact of the matter is, a super small percentage of truckers on
hammie bands
was not responsible for any enforcement "emphasis". In fact, the only
"emphasis" appears to stem from self appointed radio kopps on patrol.
The FCC merely follows up on well worded complaints that have shown
good
cause. In fact, there is no real "emphasis" on anything at the FCC,
despite your recent contributions. Compare the stats from last year,
or
the year before, or the year before that. The hammie busts are the
same,

the unlicensed busts didn't budge, and the only FCC radio related enforcements that have increase in any manner is the amount of fines levied against commercial radio stations.

> Had the "freebanders" stayed out of the ham
>bands, I doubt there would be an eyebrow
>raised.

Your hardon for freebanders is showing, Jerry. Freebanders do not intrude on hammie bands,,,in the same manner you are loathe to call one
who has a nocode call and acts the ass on usenet and on the air a true hammie, many operate and feel the same for the term of freebander, myslef included. Since there are so many, yourself at the foreforont, hellbent on painting freebanders with a wide brush, this would be a good
time to educate you on that of which you are so deluded.
Freebanders, at least the ones I have come across and associated with since the seventies, are for the most part, meticulous operators who are
very polite and are comprised of operators, both licensed and non-licensed, from around the world. They are for the most part, courteous and non-intrusive. and do NOT intrude on hammie bands, despite
your best attempts at presenting them in the same light as hammie band invaders. Shame on you for your intentional deceit. You seem a little put out lately, Jerry. Everything ok?

> When the folks start
>treading on licensed spectrum, THAT is what
>causes the ruckus.
>Jerry

Balderdash. Parts of 11 meter ARE licensed to various entities who have
chosen to abandon their choice of spectrum. Same as a vacant lot..cops drive by and see a bunch of kids playing football or baseball in a vacant lot,,,yes, the cops know they can technically arrest the kids for
trespassing, yet they use their sound judgement, as the children are not
damaging anything andthe owner did not compaint, no action is taken.
You are akin to the little old lady who watches unsupervised children playing a sandlot game and continuolusly calls the cops about the noise
they are making (children laughing) and the remote possibility that your
window MAY get broken.
Thank GOD the FCC adopted a sane approach to such activities and does not share your position.

<snip>

Lightning is non-discriminatory. ANYthing that's plugged into a
power outlet during a lightning storm stands a good chance of getting
fried from a near or direct strike.

Personally, I'm waiting for the first incidence of BPL interfering
with HF communications from FEMA, the Coast Guard, the FAA, ARINC, or
other federally-related HF/VHF radio services.

It's only going to take one failure to get a VIP's message through
to shut the whole thing down cold, methinks.

In other words, just give it time. I think the whole BPL thing's
going to blow up in Michael Powell's face, and I sincerely hope someone
catches a nice photo when it does.

That's because there are less and less "old timers" on the staff who know how to chase down and evaluate such interference and a general reluctance of the non-field people to shut someone off the air because of same.

The long slippery slope started when the agency started privatizing things such as frequency coordination and interference resolution in the mid 1980s.....

It wouldn't surprise me at all if the old standard of Part 15 devices having to tolerate interception of lawful signals gets thrown in the trashcan. That's what having policy set on less-than-technically-knowlegeable grounds can result in. It's the equivalent of ordering that all antennas be installed underground to preserve aesthetic standards.

I can't speak for Carl, but having worked for a long time in
enforcement of regulations which included the requirement that the
licensee obtain, read, and retain a copy of the applicable Rule
part, I feel that it is no substitute for demonstrating that the
licensee has a working knowledge of the Rules.

Whether one compllies with the Rules is another matter.....

>
>Again, irrelevant. And probably incorrect. The noise from BPL systems will
>clearly cross state lines.

The "it doesn't cross state lines" argument was tried by the CBers
and it failed in court on the "effects are able to cross state
lines" theory. To avoid such hassles again, The Congress amended
the Comm Act (Section 301) to give the FCC authority over all
(non-US government) radiofrequency signals or energy transmitted
(intentionally or incidentally) at any place in the US and received
at any other place in the US regardless of intrastate or interstate
considerations.

Now ----

Are you aware than an entrepreneur in RURAL eastern Oregon has set
up a 600-square-mile system of "Wi-Fi" wireless access points to
bring high-speed broadband internet service to an area whose main
activities are ranching, a rail yard (Hermiston, OR) and the
wide-open spaces of the US Army's Umatilla Chemical Weapons Depot.
Not exactly "high-density urban population".....and he expects to

recoup his investment with no problem.

This was reported in The Oregonian (Portland, OR) newspaper last week.

So much for "no other method to serve the unserved areas but BPL".

What's irresponsible about excercising our privileges on our frequencies.
How could it be jamming when BPL isn't a radio transmission? I have not and
would never advocate jamming.

1778. F1 and F4 technicians on all HF bands soon

Newsgroup: rec.radio.amateur.policy
Date: 2004-03-26 12:49:45 UTC
From: Anonymous via the Cypherpunks Tonga Remailer <nobody@cypherpunks.to>
Message-ID: <050a6c70e2697015795e16c4e315c677@cypherpunks.to>
Source record: 89742

There are 3 classes of ham-radio operators in France :

F0 : novice (no HF access, 10 W VHF)

F1-F4 : Technicians (old CEPT B)

F2-F3-F5-F6-F8-F9 : Coders (old CEPT A)
but only 5 per cent know really CW
because they get their certificate by
corruption.

The mean age of hams operators in France is 75 years (really a band of young !).
It remains about 16000 hams in France
(More than a half are no-coders).

Now that the CEPT has merged the A and
B classes (see T/R 61-01 and T/R 61-02
recommendations at http://www.ero.dk
click "Deliverables"), the regulatory
agency ART (http://www.art-telecom.fr)
has edited a new text giving full HF
privileges to F1 and F4 operators
(like other european countries did it
previously like Belgium, Swiss, etc ...)

This new text has been adopted by
unanimity on Wednesday, March 24 2004 by the CCR radio commission The text is
expected to be signed by the minister and published officially soon.

Later, the text defining the actual
3 classes of hams will be deeply
modified.

Italy seems to follow the same way ...

I changed the thread to get away from that talk.

Agreed! This brings up the chance to relate this thread to the recent
one where a poster here made the assertion that if we know our
transmissions will cause disruption to BPL access, then simply
transmitting at all would constitute willful and malicious interference.
Or at least willful.

IOW, if I know my neighbor has BPL access, does my continued use of my
HF amateur privileges when I know that tests show that the only HF
signal that did not knock a BPL signal out was at the QRP level
constitute that willful interference?

I say no, but the other side has an interesting interpretation.

Maybe Phil could weigh in on this one too?

I would predict before this is all over, someone or group will call for the elimination of Amateur radio, or at least it's access to HF frequencies, in order to serve the greater good, so that we may allow millions of Americans access to the internet through BPL.

Not that that is likely to happen, but I'll bet someone comes up with the suggestion.

Disturbing thoughts indeed.

There would almost have to be a exemption specifically for BPL access, because if the whole of part 15 was chucked, then the part 15 devices would be able to interfere with each other, but nothing could be done about it.

All the things that can radiate in the HF spectrum and interfere with or be interfered with by BPL are a large list. And if part 15 is gone, then they won't have to worry about RFI protection in design any more so the list will grow...

You mean you want a secure signal? C'mon man. This is about access choices! 8^)

Related issue:

In the early years of Cable tv, the systems were notorious for being very leaky. People came up with ingenious ad pretty simple ways to tap into this leakage and get cable for free. kind of a early wireless system if you will! I remember years ago we could get most of the cable signals then offered with just rabbit ears. We got cable anyway because the quality was better than the leakage signal.

With a signal that isn't even going over coax, the situation can only be worse.

As a novice in the late 50s, RF safety wasn't very much a part
of my understanding...beyong the concept of not touching
electrical or RF conductors. The "unseen" RF in the air wasn't
really the focus of the Novice syllabus either. But then too,
Novice was limited then to 75w as measured by plate power.

> "Remember, don't put the antenna of your handy talkie in the puppy's
> mouth and press the talk button".

Yet we put that antenna within less than an inch of our own brain
when we transmit.

> I'm no genius (ask Len) and yet I don't understand what is so hard

I agree and also believ that safety (electrical, RF and mechanical)
should be a fundamental part of novice understanding.

> If we really should eliminate it, we probably should limit the power to

Well certain aspects certainly are. There are, however,
a number of identical proposals in NCVEC to the ARRL
with which I agree.

> And I think it is also insulting toward the lowest license class.
>
> > The "signed statement" thing of the NCVEC proposal is really, really
bad.
>
> Just like the weird thing I was supposed to sign when I bought that
> C.B. rig right about the time they gave up on licensing.

I agree also. I would favor three aspects to the Novice (and all other
tets too): 1 - Some basic electrical/electronic/RF knowledge,
2 - Safety knowledge and 3 - Rules/regs. Each part should be
a separately scored subsection with a passing score required
in each subsection. This is a point I think Jim N2EY and I

have agreed on for a long time.

One aspect of the rules/regs questions could deal with operating privileges...BUT I'd suggest that be done with a frequency chart being provided to each test taker to then use to answer specific questions. I see no need to memorize band slots by license class. I sure couldn't parrot what the exclusive Extra sub-bands are for HF if I was asked. Better to know the person can read and use the frequency chart because it does change over time.

Cheers,
Bill K2UNK

> like they do a cell phone, presses up against the ear.

But when transmitting with an HT, the antenna IS right in front of
the ham's forehead...unless one is using a separate microphone.
And many HTs have power output above 5w
In contrast, cellphones automatically adjust their power
output as needed depending on signaling
protocols between the cellphone and the cell site.
Most cellphones aren't operating anywhere
near their full power which, is below 5w.

Cheers,
Bill K2UNK

Look down the list of documents on docket 03-104 in the ECFS.
You will see one sent by the Federal Communications Commission.
That is a public statement snarling back at ARINC about their
"alleged" problem of being interfered with at one station and the
FCC techs couldn't find evidence of it. Kind of a long one.

By the 26th it might be around 50 to 100 messages back from the
most current document. There were 5,813 documents in the ECFS
on 03-104 at the close of business on the 25th of March.

>you order something on line.... Because it "broadcasts" that
>info into the air.

Access BPL is a digital system. If your browser has the
many-bit encryption it will be secure both ways.

Hacker razzbonyas don't have supercomputers at their disposal
to crack even 128-bit encryption used on the Internet a couple
years ago.

Encrypted digital signals going out as incidental RF radiation
are nothing but NOISE to those without the decryption softstuff.

Of course, if you are REALLY paranoid, please remember that
some of "those out there" might really be following you... :-)

>would not be allowed to use their privileges because of part 97?

Government employees engaged in government activities would be
under regulations from the NTIA, not the FCC.

Part 97, Title 47 C.F.R. applies to civil (and rrap) U.S. radio
amateurs. Title 47 C.F.R. applies only to civil U.S. radio services.
Have you got the distinction clear yet?

You are still WRONG. THEORY doesn't go out of date unless a
new theory is shown and agreed to replace it.

If you ever got into the guts of anything electronic, you would know
that. But, you apparently don't know that because you don't go
into electronics innards.

Labels and cute names and acronyms applied to something do
NOT change theory.

>> Oh my, give you a Title and you really become difficult, don't you?
>>
>> >For your information (since you apparently don't know) the

>COR on a 6 million dollar contract.

Wow, the "Six Million Dollar Ham!" "...We have the technology, we
can rebuild Arnie..." Cut to promo, voice-over "Coming to your
favorite channel any day now...!", up exciting music bkgd, take
title...

When are you being awarded a medal for that? Will it be on CSPAN?

Got both CSPAN channels here.

>Nearly everything that we aquired for
>use in EM was either strictly commercial gear, or adapted from commercial
>gear. (as per the rewuirements of the FAR)
>
>The VTC is video teleconferencing.

Old stuff, senior. I was teleconferencing back in 1981, four locations
tied in, two with audio-video, two with only audio. In 1955 I was in a
two-location teleconference between two ACAN stations, the TTY page
opaque-projected on a screen with a voice circuit in parallel for all the
brass (as lowest rank with three-up and one down I was there only for
any operational specifics but was never called up).

Fancy acronyms you've picked up is just a form of name-dropping.
You can try sprinkling them into casual conversation to impress
friends and neighbors, but that doesn't mean you've DONE those
things.

>> If you mean the little palmtop unit favored in Europe and the UK,
>> I do.
>
>WOW, I'm impressed. Leonard has made it out of the 1960s. Very good. BTW,

>Yes, they have. One type is called a Beverage antenna, after its inventor, >H.H.Beverage.

Old Bev NEVER tried any "antenna" that can go MILES in mutually perpendicular directions using MANY different and randomly-varying paths in each direction. You should get to a community's civil engineering office and look at the various electric line routings.

If you can't get out and LOOK at the surroundings where you are, that's not my problem. The evidence is right in front of you, above you, maybe below you. Old history books won't help you there.

I'd suggest you get a strong beverage, one that will relax you first before trying to pull off that "ancient wisdom" dums**t again.

You waste too much of too many folks' time with arguments over semantic minutae.

I'm not asking that anyone know everything from day one, just that
they be tested on the rules for the license they are granted. That's
reasonable.
> >
> > Since the rules can be looked up (just as one can use a "crib sheet" to
> > remember sub-band
> > edges) it seems to me that its not an unreasonable proposition.

From the experience of Phil Kane and others, it's just not a good idea
at all. Anyone who is a newbie to amateur radio regulations should not
have any trouble passing a few questions on the regulations.

> > I'd
> > rather have someone
> > know a bit more about radio and operating and have to refer to the
> > rules as they learn to
> > make sure they did things "by the book" than to shortcut the *basic*

Why? If they can look up the rules, why can't they look up the other
things as well?

> Sorry, but I think they should have to learn both. If you have a ham
> licence you should _know_ the rules at least for your own class of licence,
> period.

I agree with Alun 100%. The rules are the one thing that every
licensee *HAS* to know *BEFORE* the license is granted.

Look at the enforcement letters of FCC, and you'll see that the vast
majority of alleged violations by hams are violations of operating
rules, not technical violations.

> > However, having said that, I personally much prefer the ARRL proposal

> > *primaries*, so what's the sense in this proposal.
> > and,
>
> Agreed, but the appropriate safety guidelines should be in the test

Ditto.

We're not talking a lot, here. The "old" Novice covered all that. No
reason the new one can't.
>
> > 4) I don't like the NCVEC to "put the mark of Cain" on the newbies with
> > a special, never-used
> > callsign block that makes them stand out as targets for those who are
> > disgruntled with ANY change.
>
> Agreed, but _only_ if they don't get to take a new ultra-lame theory test
>
It adds an unnecessary level of regs and no real benefits.

Instead, just do this:

1) Basic/Novice: Six-character callsigns (including vanity) in 2x3
format.

2) General: Six- or five-character callsigns (including vanity) in
2x3, 1x3, or 2x2 format.

3) Extra: Six-, five- or four-character callsigns (including vanity)
in 2x3, 1x3, 2x2, 1x2 or 2x1 format.

Nobody in any license class has to give up a callsign they hold now.
Closed-off license classes can choose future vanity calls from the
groups for the next-lowest license class.

Simple, universal, gives an incentive and no "mark".

Yep, back when the agency was run by technically knowledgeable people
who would have laughed BPL right out the door.

Six classes of license dates back to 1951.
13 wpm code test dates back to 1936
20 wpm code test dates back to the early 1920s

Tell us, Len - how do we *amateurs* fight something the
professionals say is a good thing? How do we convicne them it *is* a
"major calamity"?

Or don't you know how to do that?

Still chanting Morse Code Uber Alles are you? :-)

Poor baby.

3 classes of new licenses dates back to 2000.

5 words per minute singular code test rate dates back to 2000.

This year is 2004.

>Tell us, Len - how do we *amateurs* fight something the
>*professionals* say is a good thing? How do we convicne them it *is* a
>"major calamity"?
>
>Or don't you know how to do that?

I don't know how to "convicne" them or what that word means.

As to CONVINCING any group, all I can suggest is communicating your grievances to your government. If you are a United States citizen, then you are given that right by the First Amendment of the United States Constitution.

For grievances about Access BPL and NPRM 04-29 concerning amendments to Part 15, Title 47 C.F.R., for Access BPL, you have three very quick access routes through the FCC website at dockets 04-27, 04-29, 03-104 which can all be made through the FCC Electronic Comment Filing System (ECFS). If you don't know how to use that route, the FCC has made a good Help page available to all. You may alternately or simultaneously choose to comment via other media. The methods for that are also explained on an FCC Help page available to all.

As of the close of FCC office hours on 25 March 2004, there were 108 documents filed under docket 04-37, 6 documents under docket 04-29, 5813 documents under docket 03-104. I have made my comments to the FCC on all three dockets plus I am finishing surface mail correspondence with my federal Senator and federal Representative in reference to NPRM 04-29 and Access BPL.

You are welcome to do nothing but sit in here and pick verbal bar fights with others if you wish. That is a free option but it doesn't make any sort of communications to federal regulators about Access BPL one way or the other. Your choice.

> Maybe Phil could weigh in on this one too?

This attorney says that if you are operating within the FCC Rule
requirements then any interception by a system which is not intended
to receive those signals - be it an audio device or a BPL system -
is the problem of the affected system operator and not of the
transmitter operator or licensee.

In communications regulatory law, "willful" is defined as knowing
that you are doing an act regardless of the intent of doing that act
or its effects - it is the opposite of "accidental".

For example, operating a transmitter is a willful act - you know
that you are operating a transmitter. If operation of that
transmitter is a violation (such as on an unauthorized frequency)
that is a willful violation regardless of any intent to violate FCC
rules.

Operating a radio transmitter in full compliance with the terms of
license and FCC rules is not "in violation".

>choices for consumers.

Pardon me while I barf.

Then again, "interfere" and "interference" have specific definitins
in both national and international communications law which refer to
interruptions of LICENSED communication services.......of which BPL
is most assuredly not.

No one is disputing that BPL is a Part 15 "unintentional radiator"
which is not protected. The dispute is over the level of allowable
signal or noise permitted under rules pertaining to said applications.

>> So much for "no other method to serve the unserved areas but BPL".

Did anyone actually say that? It's highly inaccurate if they did. I think there is a vision of just sending the signals over the power lines and boy howdy, an instant nationwide network, everywhere there is a power line, "you have mail!"

In truth, a fiber has to be run to somewhere near the house that is going to be served, so that means that rural areas will not be any easier to serve than they are now.

I'm not certain, maybe just a coincidence, but there's a Tom Gibson I know/met who's has some ties to Montana. He may have worked up there for some time. This fellow was also a maritime operator and is currently (I hope!) an officer on the museum ship John Brown (Liberty Ship in Baltimore). Last time I saw Tom was aboard last year. Might this be the same person?

You obviously haven't be paying attention to the group official rules
interpreter, Frankie Gilligan. According to him that would be malicious
interference and would completely be the hams fault and the ham would be
operating illegally.

>>
Bush Touts High-Speed Internet Access Plan

Saturday March 27, 2004 12:01 AM

By SCOTT LINDLAW
Associated Press Writer

ALBUQUERQUE, N.M. (AP) - President Bush, hunting for votes in hotly
contested Sun Belt states, said Friday his administration is working
toward wiring homes throughout America with high-speed Internet access
by 2007.
....

In an outdoor speech here, the president stopped short of promising he
would reach the goal by 2007, saying instead that ``we ought to have''
cheap high-speed access everywhere. Nor did he offer a detailed plan
on how he hoped to achieve it.

But his administration has been working at it behind the scenes. Last
month, the Federal Communication Commission voted to write rules for a
third way to bring high-speed Internet service to homes: through
conventional electric lines, where a homeowner could plug a modem into
an electrical outlet.

>vast majority of people who want to talk, learn and experiment with digital
>modes, etc.

That's one way to look at it. Here's another:

After 1991, newcomers had a choice of two entry licenses (meaning (obtainable
with the minimum amount of testing).

They could choose the Novice, which required a written test and a 5 wpm code
test. This license gave them some HF privileges (mostly but not exclusively
Morse Code) and some privileges on VHF/UHF. But they were kept off the most
popular amateur VHF/UHF bands (2 meters, 6 meters and 440 MHz) and got
six-character callsigns.

OR

They could choose the Technician, which required two similar written tests but
no code test. This license gave them no HF privileges but *all* privileges on
VHF/UHF. In many areas they got five-character callsigns, or could get them via
the vanity program. And if/when they passed the 5 wpm code test, the HF
privileges of the Novice class would be added on.

Which is easier to study for: two multiple-choice written tests that are highly
similar to each other, or two tests that require completely different study
methods?

Even before 1987, many if not most new hams bypassed the Novice and went straight for Tech - in large part because they wanted VHF/UHF privileges right off. Particularly 2 meters and/or 440.

It should be noted that in the past 4 years the number of new hams has not increased dramatically, even though the code test has been reduced to 5 wpm for all classes.

<SIGH>

You just don't get it, do you Oxendorf ? You have to be one humongous ass...
plain & simple !

The crap you keep posting in Misc.Transport.Trucking doesn't apply to me,
either..... yet you keep posting it.

Soooooooooo.... using your principles & the way you constantly TROLL MTT
with your bullshit, my post's would be accurate. With the way you stereotype
truck drivers & their radios..... my stereotyping child molesting ham
operators would be accurate !! Thank you.

Heck, after all, it's in the report from the F.C.C., you should know, you
keep posting the reports..... you sexual deviant !

Arnie, please don't ask me to bless what others do on amateur radio.
I've been heavily criticized for a couple of positions that I've taken
wrt a literal "interpretation" of Part 97.

1. The no monetary rule, and repeater owners charging "dues" for
repeater use.

2. Administering a Farnsworth exam when Part 97 clearly states "Morse
Code."

I don't make the rules, and I don't take it upon myself to interpret
workarounds to what Part 97 states.

I leave that sort of work to the experts on RRAP and the FCC.

When you take a dislike to someone, you accuse them, villify them,
make them liars, stalk them, attack them, and start numerous smear
threads about them.

RRAP is littered with people you hate.

You have yet to prove that I've lied a single time. Just repeating it over and over doesn't make it so.

But it does make you look nuts.

I'm just amazed at how easily some can brush aside the monumental
waste of time learning the Morse Code and become.

Probably someone without a job, on disability, or retired.

>You're more likely not to get a reply with that tactic.

What "tactic", Brain?

Firts of all I don't reply in "ALLCAPS". I do use specific words capiltalized for emnphasis, and this only becuase it seems that YOU require the mephasis in order to understand what's being said.

Secondly, if I put something in "quotes", it's again to specifically emphasize the word or to make it apparent that I am repating someone elses words.

Third, I only make "ACCUSSATIONS" when there is some proof that I am correct.

So far you spent about 10 days dodging an explanation to questions about YOUR assertion that unlicensed radio services play a "major role" (your adjectives) in "emergency comms" (your "term")

Lastly, the "damands" only seem like "demands" when YOU are hard-pressed to respond because you know that some soft, tender part of your anatomy is in the vise.

Sorry, PuppetBoy...you put them there...Ya shouldn't have put them there if getting them squeezed was against your nature.

>> Not that you'd answer any of it honestly anyway.
>
>Not that you target minutia and then demand retribution.

If I wanted "retribution", I
d have it.

AS for "target(ing) minutia", this IS a forum about communications, and you've made an assertion of fact about emergency communications that I am asking you to substantiate.

So far you've refused, choosing, rather, to make assertions of mental instability or other allegations that are so obviosly a childish, sandlot dodge...Not that I'd expect anything else from Lennie's "mentor"...

Only the one where-in Brittany Spears shows up at my front door with
round-trip tickets to Tahiti begging me to go with her.

OIther than that, I've pretty well got you and Lennie by the cajones...As
hard as it is to hold on to something that small.

>repeater use.

What "interpretation" did YOU make, Brain?

The FCC itself has issued several "clarifications" on these very specific
topoics that you've cited here. What interpretation was left to be made?

>2. Administering a Farnsworth exam when Part 97 clearly states "Morse
>Code."

There is no such thing as a "Farnsworth" exam, Brain.

>I don't make the rules, and I don't take it upon myself to interpret
>workarounds to what Part 97 states.

What "workarounds"...?!?! The FCC had already "interpreted" the specific items you've mentioned in this post, Brain.

Or are you simply voicing your disagreement with thier position on those specifics?

>I leave that sort of work to the experts on RRAP and the FCC.

The "experts" in RRAP are one thing....

The FCC staffers, on the otherhand, >>ARE<< the "experts". Even your "mentor" says so. Do you disagree?

can you quote the actual statistics for that? or are you just pulling a
figure out of the hat and calling it fact?

FYI, pedophiles exist at all layers and in all walks of life in all
countries. Fact is, ham radio has a lot less of the deviants than the
statistical norm for a population of a given country. Care to explain that
one Tom?

>> Lennie's been proven to be a lair, and now you are.

>When you take a dislike to someone, you accuse them, villify them,
>make them liars, stalk them, attack them, and start numerous smear
>threads about them.

A "smear thread" insinuates that the thread was initiated with the intent
to mislead or misrepresent some "facts" about the person targeted, Brain.

WHAT about any of my exchanges with "Mark Morgan" were not true? Mark
misrepresented himslef to be a commissioned field grade officer in the Armed
Forces of the United States. He made other accusations and statements of fact
that were each, in turn, proven to be untrue.

>RRAP is littered with people you hate.

Nope. Just a FEW people proven to be mistruthful. You would be one of
them.

WHAT about my exchanges with Lennie are not true? Lennie is unlicensed in
the Amateur Radio service. He has made numerous assertions of fact that have
been disproven by myeslf and others in this forum. He has made statements
which validate MY assertion that his lack of practical experience in Amateur
Radio PRACTICE leave him poorly prepared to make INFORMED opinions about the
Amateur Radio service.

WHAT about my exchanges with YOU are not true? You have made numerous assertions of fact about operating from a U.N.-controlled area of the world and have yet to provide any validation of your legitimacy in doing so. You can't/won't even provide the callsign of ONE station you "worked" while operating from there You have further made assertions of fact pertaining to emergency copmmunications practice and application that I've asked you to substantiate, yet you've spent almost two weeks spinning and dancing around THAT.

>You have yet to prove that I've lied a single time. Just repeating it
>over and over doesn't make it so.

I HAVE proven you've lied, Brain. YOU have asserted that you never said that the unlicensed radio services "play a "major role" in emergency comms".

I have repeated the very same quote a couple of times THIS WEEK. THAT was just ONE of them...I can eat up bandwidth all day re-quoting your dodges if it's necessary, but why?

You made an assertion. I asked you to back it up. You then claimed you never made the assertion but then I showed you did. You've now lied about that.

>But it does make you look nuts.

Uh huh. Right. The only thing that might make me look nuts is my steadfast expectation that you will manifest enough internal fortitude to be stand-up enough to answer the questions put to you over YOUR assertions.
